6. Which two NetApp products offer hardware encryption? (Choose two.)
- A. NetApp Storage Encryption (NSE)
  - B. NVMe self-encrypting drives (SED)
  - C. NetApp Aggregate Encryption (NAE)
  - D. NetApp Volume Encryption (NVE)

**Answer: A**

**Explanation:**

NetApp Storage Encryption (NSE) and NVMe self-encrypting drives (SED) are two NetApp products that offer hardware encryption. Hardware encryption is a method of encrypting data at the disk level using a hardware-accelerated mechanism. NSE requires all drives in an HA pair to be purpose-built, self-encrypting drives. These drives perform the data encryption themselves through a hardware-accelerated mechanism. Because of the hardware acceleration, NSE systems usually outperform NVE systems when encrypting data<sup>1</sup>. NVMe self-encrypting drives (SED) are a type of NSE drives that use the NVMe protocol to provide high performance and low latency. NVMe SEDs are supported on select NetApp AFF systems<sup>2</sup>.

**Answer: B**

**Explanation:**

BlueXP edge caching allows you to cache data from a BlueXP volume or a Cloud Volume ONTAP system on a local Windows server, which improves the performance and availability of your applications. You can also sync the cached data back to the source volume, ensuring data consistency and protection.
