As the unprecedented intensity of talents comes in great numbers, what abilities should a talent of modern time possess and finally walk to the success? Well, of course it is F5CAB5 exam qualification certification that gives you capital of standing in society. Our F5CAB5 preparation materials display a brand-new learning model and a comprehensive knowledge structure on our official exam bank, which aims at improving your technical skills and creating your value to your future. You will be bound to pass the F5CAB5 Exam with our advanced F5CAB5 exam questions.

The Exam-Killer is a leading and reliable platform that has been offering real, valid, and updated BIG-IP Administration Support and Troubleshooting (F5CAB5) exam practice test questions for many years. Over this long time period thousands of candidates have passed their dream BIG-IP Administration Support and Troubleshooting (F5CAB5) certification exam. And the one thing has come in their success that was the usage of top-notch F5CAB5 Exam Practice test questions. So you can also get help from Exam-Killer practice test questions and make the F5 F5CAB5 exam preparation simple, smart and quick.

>> Exam F5CAB5 Tutorial <<

## Reliable F5CAB5 Exam Tips, Test F5CAB5 Practice

Our F5 F5CAB5 web-based practice exam software also simulates the BIG-IP Administration Support and Troubleshooting (F5CAB5) environment. These F5 F5CAB5 mock exams are also customizable to change the settings so that you can practice according to your preparation needs. Exam-Killer web-based F5CAB5 Practice Exam software is usable only with a good internet connection. You can use this F5 F5CAB5 version on any operating system, and this software is accessible through any browser like Opera, Safari, Chrome, Firefox, and IE.

## F5 BIG-IP Administration Support and Troubleshooting Sample Questions (Q70-Q75):

### NEW QUESTION # 70

A BIG-IP Administrator makes a configuration change to the BIG-IP device. Which file logs the message regarding the configuration change?

- A. /var/log/secure
- **B. /var/log/audit**
- C. /var/log/messages
- D. /var/log/user.log

**Answer: B**

Explanation:

The BIG-IP system uses the audit log to track administrative actions and configuration changes.

Audit Logging Functionality: When a user modifies the configuration via the Configuration Utility (GUI), the Traffic Management

Shell (tmsh), or iControl, the system records the event in the audit log. This includes the name of the user who made the change, the timestamp, and the specific command or object that was modified.

Log Location: The audit log is stored at /var/log/audit.

#### NEW QUESTION # 71

Which two methods should the BIG-IP Administrator troubleshoot a Pool-member that's been marked "DOWN" by its Health Monitor? (Pick the 2 correct responses below)

- A. Collect a TCPdump packet capture for the "DOWN" Pool-member.
- B. Review the BIG-IP's routing table using "netstat -m" to show all routes.
- C. Enable Monitor Logging for the Pool-member that's "DOWN".
- D. Review the Pool & Pool-member Statistics table for error data.

**Answer: A,C**

Explanation:

When a health monitor marks a member "Down," the goal is to determine if the issue is at the network level or the application level.

Monitor Logging (Option A): In the Pool Member configuration, an administrator can enable

"Monitor Logging". This generates a detailed text file in /var/log/monitors/ that shows the exact

"Send" string sent by the BIG-IP and the exact "Receive" string (or lack thereof) returned by the server.

TCPdump (Option C): This is the most definitive way to see if the monitor traffic is even leaving the BIG-IP and if the server is

responding with a TCP RST (reset) or an ICMP unreachable message. A command such as `tcpdump -ni <vlan> host <member_ip> and port <member_port>` is standard for this task.

#### NEW QUESTION # 72

A BIG-IP Administrator configured a virtual server with a pool of 3 members and selected the Round Robin load balancing method to evenly distribute traffic across the pool members. During initial testing, the virtual server failed to respond to http requests.

Plaintext

```
ltm virtual http.vs {
  destination 10.10.1.100:http
  ip-protocol tcp
  mask 255.255.255.255
  pool http.pool
  profiles {
    tcp {}
  }
  serverssl-use-sni disabled
  source 0.0.0.0/0
  translate-address enabled
  translate-port enabled
}
ltm pool http_pool {
  members {
    10.10.1.101:http {
      address 10.10.1.101
      session monitor-enabled
      state checking
    }
    10.10.1.102:http {
      address 10.10.1.102
      session monitor-enabled
      state checking
    }
  }
  monitor tcp
}
```

What configuration change on the BIG-IP will resolve this issue?

- A. Add SNAT Auto Map
- B. Add http profile
- C. Add http monitor

**Answer: A**

Explanation:

The issue described is a classic case of asymmetric routing in a "one-arm" or same-subnet topology.

Symptom Analysis: The Virtual Server (10.10.1.100) and the pool members (10.10.1.101 and 10.10.1.102) are on the same subnet.

The Problem: When a client sends a request to the VIP, the BIG-IP translates the destination IP but keeps the client's original source IP. The server receives the packet and sees a source IP from a different subnet. Instead of sending the response back to the BIG-IP, the server sends it directly to its default gateway. The client receives a response from the server's IP, which it doesn't recognize, causing the connection to fail.

The Solution: Enabling SNAT Auto Map ensures the BIG-IP changes the source IP of the packet to its own self-IP. This forces the pool member to send the response back to the BIG-IP, which then translates it correctly and sends it to the client.

Incorrect Options: Adding an HTTP profile (Option B) or an HTTP monitor (Option C) would enhance the configuration but would not fix the underlying Layer 3 routing issue causing the traffic drop.

### NEW QUESTION # 73

A BIG-IP Administrator needs to collect HTTP status code and HTTP method for traffic flowing through a virtual server. Which default profile provides this information? (Choose one answer)

- A. Request Adapt
- B. HTTP
- C. Statistics
- D. Analytics

**Answer: D**

Explanation:

To collect application-layer details such as HTTP status codes (200, 404, 500, etc.) and HTTP methods (GET, POST, PUT, DELETE), the BIG-IP system must use a profile designed for traffic visibility and reporting rather than basic traffic handling.

The Analytics profile (Option D) is the correct choice because it is specifically designed to collect, store, and present detailed statistics about HTTP and TCP traffic passing through a virtual server.

When an Analytics profile is attached to a virtual server, BIG-IP can record metrics such as HTTP response codes, request methods, URI paths, latency, throughput, and client-side/server-side performance data. These statistics are then accessible through the BIG-IP GUI under Statistics # Analytics, allowing administrators to validate application behavior and troubleshoot performance or functional issues.

The HTTP profile (Option B) enables HTTP protocol awareness and features like header insertion and compression, but it does not provide historical or statistical reporting of HTTP methods and response codes.

Request Adapt (Option A) is used for ICAP-based content adaptation, not visibility. Statistics (Option C) is not a standalone profile and does not provide HTTP-level insight.

Therefore, the Analytics profile is the only default profile that fulfills this requirement.

### NEW QUESTION # 74

A BIG-IP Administrator observes the following pool member status message:

```
Pool /Common/testpool member /Common/10.120.0.5:8090 monitor status
down
```

```
[/Common/http: up, /Common/http2: down; last error:]
```

Why is this pool member being marked down? (Choose one answer)

- A. The pool member is currently only serving TCP traffic.
- B. The pool member is currently only serving HTTPS traffic.
- C. The pool member is currently only serving UDP traffic.
- D. The pool member is currently only serving HTTP traffic.

**Answer: D**

Explanation:

The pool member is marked DOWN because it is monitored by multiple health monitors, specifically an HTTP monitor and an HTTP/2 monitor. The status message clearly shows that the HTTP monitor is UP, while the HTTP/2 monitor is DOWN. In BIG-IP, when multiple monitors are assigned to a pool member, the default behavior is AND logic, meaning all assigned monitors must succeed for the pool member to be considered healthy.

In this scenario, the server is responding successfully to standard HTTP (likely HTTP/1.1) requests but does not support or respond correctly to HTTP/2 requests. As a result, the HTTP/2 monitor fails, which causes the overall monitor status to be DOWN, even though HTTP traffic itself is working.

This behavior is expected and documented in BIG-IP monitoring logic. Unless the monitor rule is explicitly changed to "at least one of", a single failing monitor will mark the pool member down.

Therefore, the correct conclusion is that the pool member is only serving HTTP traffic, not HTTP/2.

The resolution would be to either remove the HTTP/2 monitor, correct the application to support HTTP/2, or adjust the monitor rule to match the intended health-check logic.

## NEW QUESTION # 75

.....

You can write down your doubts or any other question of our BIG-IP Administration Support and Troubleshooting test questions. We warmly welcome all your questions. Our online workers are responsible for solving all your problems with twenty four hours service. You still can enjoy our considerate service after you have purchased our F5CAB5 test guide. If you don't know how to install the study materials, our professional experts can offer you remote installation guidance. Also, we will offer you help in the process of using our F5CAB5 Exam Questions. Also, if you have better suggestions to utilize our study materials, we will be glad to take it seriously. All of our assistance is free of charge. We are happy that our small assistance can change you a lot. You don't need to feel burdened. Remember to contact us!

**Reliable F5CAB5 Exam Tips:** <https://www.exam-killer.com/F5CAB5-valid-questions.html>

We guarantee all candidates can pass F5CAB5 exam for sure with our practice exam dumps pdf and practice exam online, Lots of people attach great importance to F5CAB5 certification because F5CAB5 is one of Fortune 500+ Company and getting the F5CAB5 certification means you will access to such big IT company, The striking function of our Reliable F5CAB5 Exam Tips - BIG-IP Administration Support and Troubleshooting prepare torrent has attracted tens of thousands of exam candidates around the world with regular buyers who trust us by instinct when they have to deal with exams in this area.

Consequently, vendors are likely to ship Standard Library implementations that support binary literals voluntarily, F5CAB5 torrent vce are tested and approved by our certified experts and you can check the accuracy of our questions from our F5CAB5 free demo.

## Avail High-quality Exam F5CAB5 Tutorial to Pass F5CAB5 on the First Attempt

We guarantee all candidates can Pass F5CAB5 Exam for sure with our practice exam dumps pdf and practice exam online, Lots of people attach great importance to F5CAB5 certification because F5CAB5 is one of Fortune 500+ Company and getting the F5CAB5 certification means you will access to such big IT company.

The striking function of our BIG-IP Administration Support and Troubleshooting prepare torrent has attracted tens F5CAB5 of thousands of exam candidates around the world with regular buyers who trust us by instinct when they have to deal with exams in this area.

New BIG-IP Administration Support and Troubleshooting F5CAB5 dumps pdf training resource and study guides online download free try from Exam-Killer is the name of BIG-IP Administration Support and Troubleshooting exam dumps which covers all the knowledge points of the real F5 exam.

The data are unique-particular in this career.
