Quiz 2026 Updated Juniper JN0-105: Reliable Junos, Associate (JNCIA-Junos) Exam Question

FreeDumps JN0-105 practice material can be accessed instantly after purchase, so you won't have to face any excessive issues for preparation of your desired Juniper JN0-105 certification exam. The Juniper JN0-105 Exam Dumps of FreeDumps has been made after seeking advice from many professionals. Our objective is to provide you with the best learning material to clear the JN0-105 exam.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which Junos feature limits the amount of exception traffic that is sent from the PFE to the RE?

- A. policer
- B. scheduler
- C. routing policy
- D. CoS markings

Answer: A

Explanation:

In Junos OS, a policer is a feature used to limit the rate of traffic flow in the network, including exception traffic sent from the Packet Forwarding Engine (PFE) to the Routing Engine (RE). Exception traffic consists of packets that cannot be processed by the PFE

alone and require intervention by the RE, such as control packets or packets destined for the device itself. A policer can be configured to enforce bandwidth limits and drop or mark packets that exceed specified rate limits, thus protecting the RE from being overwhelmed by excessive exception traffic.

NEW QUESTION # 21

You want to configure the management port on a Juniper device. In this scenario, what is the management interface name?

- A. mtun0
- B. fxp0
- C. mt0
- D. st0

Answer: B

Explanation:

In Junos OS, the dedicated out-of-band management interface is typically named fxp0. This interface is used exclusively for management traffic and is physically separated from the data traffic interfaces. It allows administrators to perform management tasks even when the device is experiencing issues that affect the forwarding plane.

From the JNCIA-Junos Study Guide and Junos OS Documentation:

"The fxp0 interface is a dedicated management interface that provides out-of-band management access. It is commonly found on Juniper routers, switches, and security platforms. You assign IP addresses to this interface as you would any other, and it is often used to connect to a management network or to allow SSH, Telnet, or SNMP access."

NEW QUESTION # 22

Which command displays all IPv6 routes in the default routing instance?

- A. showroute table inet.0
- B. showroute table inet6.0
- C. showroute table inet.1
- D. showroute table inet6.1

Answer: B

Explanation:

The show route table inet6.0 command displays all IPv6 routes in the default routing instance. In Junos OS, the routing table for IPv6 addresses is referred to as inet6.0, whereas inet.0 is used for IPv4 unicast routes.

The other options do not correspond to the correct IPv6 routing table.

* Juniper official documentation: Junos OS Routing Tables Overview.

NEW QUESTION # 23

You are asked to configure your device running Junos OS to automatically archive your configuration upon commit. In this scenario, which two methods are supported by the Junos OS? (Choose two)

- A. FTP
- B. HTTP
- C. SCP
- D. RCP

Answer: C,D

Explanation:

Junos OS supports multiple methods for automatically archiving configurations upon commit. Two of the supported methods are SCP (Secure Copy Protocol) and RCP (Remote Copy Protocol). These methods can be configured to save the configuration files to a remote server automatically whenever a commit is made.

Reference: Juniper Networks Documentation on Configuration Archival

"You can configure Junos OS to automatically archive the configuration using protocols such as SCP and RCP upon commit."

NEW QUESTION # 24

Which two statements describe the result when you enter ? at the command-line prompt? (Choose two.)

- A. It lists tips for the help menu.
- **B. It lists the available commands and options.**
- C. It displays help about a text string contained in a statement.
- **D. It displays summary information about the commands and options.**

Answer: B,D

Explanation:

When you enter ? at the command-line prompt in Junos OS, the system provides assistance in two significant ways. Firstly, it lists the available commands and options that can be used at the current point in the command hierarchy, aiding users in understanding what commands they can execute next. Secondly, it displays summary information about those commands and options, providing brief descriptions or additional context that can help users understand the function of each command or option. This feature is particularly useful for learning the command structure or for quick reference when specific command syntax is forgotten.

NEW QUESTION # 25

.....

If you have tried on our JN0-105 exam questions, you may find that our JN0-105 study materials occupy little running memory. So it will never appear flash back. If you want to try our JN0-105 learning prep, just come to free download the demos which contain the different three versions of the JN0-105 training guide. And you will find every version is charming. Follow your heart and choose what you like best on our website.
