To meet the needs of users, and to keep up with the trend of the examination outline, our products will provide customers with latest version of our products. Our company's experts are daily testing our AWS-Solutions-Associate learning materials for timely updates. So we solemnly promise the users, our products make every effort to provide our users with the latest learning materials. As long as the users choose to purchase our AWS-Solutions-Associate learning material, there is no doubt that he will enjoy the advantages of the most powerful update.

Amazon AWS-Solutions-Associate (AWS Certified Solutions Architect - Associate (SAA-C02)) certification exam is designed to test the candidate's knowledge and skills in designing and deploying scalable, highly available, and fault-tolerant systems on AWS. It is an associate-level certification that is ideal for individuals who want to demonstrate their expertise in cloud computing and gain recognition as an AWS Solutions Architect. AWS Certified Solutions Architect - Associate (SAA-C03) certification exam is based on the latest AWS SAA-C02 exam blueprint, which includes updated content and focuses on the latest AWS services and best practices.

The AWS-Solutions-Architect-Associate Certification Exam covers a wide range of topics such as designing and deploying scalable, highly available, and fault-tolerant systems, selecting the appropriate AWS services based on requirements, migrating complex multi-tier applications to AWS, estimating AWS costs and identifying cost-control measures, and securing AWS resources using AWS security services and tools. AWS Certified Solutions Architect - Associate (SAA-C03) certification exam also evaluates the candidate's ability to troubleshoot common problems and optimize AWS architectures for performance and cost. Passing AWS-Solutions-Associate Exam requires a deep understanding of AWS services and their integration, as well as hands-on experience with AWS tools and practices.

Prep4sureGuide regularly updates AWS-Solutions-Associate Exam Questions' pdf version so that you always have the latest material. Furthermore, the Amazon AWS-Solutions-Associate pdf can be printed enabling paper study.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q49-Q54):

NEW QUESTION # 49

A company wants to run workload-Intensive queries from its 10 TB Amazon Aurora MySQL DB cluster. Temporary schema changes need to be made to the database to generate monthly reports. However, these changes are not desired for the ongoing production cluster. The company must choose the most operationally efficient solution to meet these requirements. Which solution should the company choose?

- A. Create a database clone and use the clone for reporting.
- **B. Create Aurora Read Replicas and use them for reporting.**
- C. Take a snapshot of the production DB cluster. Restore the snapshot to a new database for reporting.
- D. Export the needed tables to Amazon S3. Query the data by using Amazon

Answer: B

NEW QUESTION # 50

When you put objects in Amazon S3, what is the indication that an object was successfully stored?

- A. A success code is inserted into the S3 object metadata.
- B. Amazon S3 is engineered for 99.999999999% durability. Therefore there is no need to confirm that data was inserted.
- **C. A HTTP 200 result code and MD5 checksum, taken together, indicate that the operation was successful.**
- D. Each S3 account has a special bucket named `_s3_logs`. Success codes are written to this bucket with a timestamp and checksum.

Answer: C

NEW QUESTION # 51

You have been asked to set up monitoring of your network and you have decided that Cloudwatch would be the best service to use. Amazon CloudWatch monitors your Amazon Web Services (AWS) resources and the applications you run on AWS in real-time. You can use CloudWatch to collect and track metrics, which are the variables you want to measure for your resources and applications. Which of the following items listed can AWS Cloudwatch monitor?

- A. Custom metrics generated by your applications and services .
- **B. All of the items listed on this page.**
- C. System-wide visibility into resource utilization, application performance, and operational health.
- D. Log files your applications generate.

Answer: B

Explanation:

Amazon CloudWatch can monitor AWS resources such as Amazon EC2 instances, Amazon DynamoDB tables, and Amazon RDS DB instances, as well as custom metrics generated by your applications and services, and any log files your applications generate. You can use Amazon CloudWatch to gain system-wide visibility into resource utilization, application performance, and operational health. You can use these insights to react and keep your application running smoothly.

NEW QUESTION # 52

What is the maximum number of data points for an HTTP data request that a user can include in PutMetricRequest in the CloudWatch?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The size of a PutMetricData request of CloudWatch is limited to 8KB for the HTTP GET requests and 40KB for the HTTP POST requests. The user can include a maximum of 20 data points in one PutMetricData request.

NEW QUESTION # 53

A social media company is building a feature for its website. The feature will give users the ability to upload photos. The company expects significant increases in demand during large events and must ensure that the website can handle the upload traffic from users. Which solution meets these requirements with the MOST scalability?

- A. Provision an AWS Storage Gateway file gateway. Upload files directly from the user's browser to the file gateway.
- B. Upload files from the user's browser to the application servers. Transfer the files to an Amazon S3 bucket.
- C. Generate Amazon S3 presigned URLs in the application. Upload files directly from the user's browser into an S3 bucket
- D. Provision an Amazon Elastic File System (Amazon EFS) file system. Upload files directly from the user's browser to the file system.

Answer: C

NEW QUESTION # 54
