Authoritative SAFe-RTE Download Pdf, Ensure to pass the SAFe-RTE Exam

The SAFe-RTE certification verifies that you are a skilled professional. Prep4King product is designed by keeping all the rules and regulations in focus that Scaled Agile publishes. Our main goal is that you can memorize the actual Scaled Agile SAFe-RTE Exam Question to complete the SAFe Release Train Engineer (SAFe-RTE) test in time with extraordinary grades.

Scaled Agile SAFe Release Train Engineer Sample Questions (Q37-Q42):

NEW QUESTION # 37

When is the Inspect and Adapt event held?

- **A. At the end of the Program Increment (PI)**
- B. After the System Demo
- C. At the end of every Iteration
- D. During the Program Increment (PI)

Answer: A

Explanation:

The Inspect and Adapt (I&A) event is a significant event in the SAFe framework that is held at the end of each Program Increment (PI). The purpose of this event is to demonstrate and evaluate the current state of the Solution, where teams reflect on their progress and identify improvement backlog items through a structured problem-solving workshop. This aligns with the Agile Manifesto's emphasis on continuous improvement and SAFe's Core Value of relentless improvement. The I&A event includes all ART stakeholders and results in improvement backlog items that are added to the ART Backlog for the next PI Planning event. This ensures that every Agile Release Train (ART) improves with every PI

NEW QUESTION # 38

What are two purposes of a community of practice? (Choose two.)

- **A. To share knowledge and skills**
- B. To approve standards
- C. To refine definitions of done
- **D. To network**
- E. To align tasks across teams

Answer: A,D

Explanation:

Communities of Practice (CoPs) within the SAFe framework are designed to be organized groups with a common interest in a specific technical or business domain. They collaborate regularly to share information, improve their skills, and actively work on advancing their knowledge of the domain. The purposes of CoPs include fostering a culture built on professional networking, personal relationships, shared knowledge, and common skills. This aligns with the options D and E, as CoPs enable SAFe participants to exchange knowledge and skills with people across the entire organization and provide opportunities for networking. CoPs are not primarily for approving standards or aligning tasks across teams, nor are they for refining definitions of done, which excludes options A, B, and C from being correct answers.

NEW QUESTION # 39

Which action describes the behavior of applying Systems Thinking for a Release Train Engineer (RTE)?

- A. Facilitates individual decision-making over team-level decision-making
- **B. Examines what may be missing to make the environment better for the team**
- C. Encourages the team to express opinions in all circumstances
- D. Demonstrates appreciation to team members in many ways

Answer: B

NEW QUESTION # 40

What practice can help to identify bottlenecks in the flow of work?

- A. Measuring lead time for all work in progress
- **B. Visualizing the flow of all work and track progress of individual items**
- C. Comparing transaction costs, holding costs and business value realization
- D. Modeling overall process flow during value stream identification

Answer: B

Explanation:

The SAFe framework emphasizes the importance of visualizing work to identify bottlenecks in the flow of value. This is aligned with Lean-Agile principles, which advocate for making work visible to help teams understand the current state of the system, identify bottlenecks, and improve flow. By visualizing the flow of all work and tracking the progress of individual items, teams can quickly see where issues are occurring and take steps to address them. This practice is a key responsibility of the Release Train Engineer (RTE), who facilitates Agile Release Train (ART) events and processes, and supports teams in delivering value. The RTE helps manage risks, escalates impediments, and drives relentless improvement, which includes identifying and addressing bottlenecks in the flow of work¹².

NEW QUESTION # 41

How can a Release Train Engineer help unlock intrinsic motivation?

- **A. Give tough feedback supportively and be willing to be more vulnerable**
- B. Practice healthy conflict resolution between teams and team members
- C. Emphasize participation from senior leadership to expedite decisions
- D. Establish good incentives for aligning with the enterprise's goals

Answer: A

Explanation:

To unlock intrinsic motivation, a Release Train Engineer (RTE) can:

- * Foster an Empowering Environment: Encourage knowledge workers to develop innovative and creative solutions by fostering an empowering and supportive work environment¹.
- * Understand the Role of Compensation: Recognize that compensation is not the primary motivator for knowledge workers. Instead, focus on intellectual freedom and self-actualization¹.
- * Leverage Autonomy, Mastery, and Purpose: Support the development of autonomy, mastery, and purpose among team members to enhance their intrinsic motivation¹.
- * Encourage Participation and Learning: Facilitate communication across functional boundaries, fast feedback, continuous learning, and a fulfilling solution development process¹.
- * Practice Healthy Conflict Resolution: While not directly mentioned in the context of intrinsic motivation, practicing healthy conflict resolution can contribute to a positive work environment, which indirectly supports intrinsic motivation¹.

By implementing these steps, an RTE can help team members find joy and satisfaction in their work, which is the essence of intrinsic motivation.

NEW QUESTION # 42

.....

There are thousands of customers that have passed the SAFe Release Train Engineer (SAFe-RTE) examination by merely using the product of Prep4King.
