EX380 Valid Test Vce | Relevant EX380 Questions

Our company keeps pace with contemporary talent development and makes every learners fit in the needs of the society. Based on advanced technological capabilities, our EX380 study materials are beneficial for the masses of customers. Our experts have plenty of experience in meeting the requirement of our customers and try to deliver satisfied EX380 Exam guides to them. Our EX380 exam prepare is definitely better choice to help you go through the EX380 test. Buy our EX380 exam questions, the success is just ahead of you.

RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q37-Q42):

NEW QUESTION # 37

Deploy Event Router and capture Kubernetes events in logging

Task Information : Deploy an event router so Kubernetes events are recorded as logs, then trigger events and confirm they appear in logging queries.

Answer:

Explanation:

See the solution below in Explanation:

- * Deploy event router resources
- * Apply a deployment/serviceaccount/rolebinding manifest for eventrouter:
- * oc apply -f eventrouter.yaml -n openshift-logging
- * Eventrouter watches event API and writes them to stdout (collected by logging).
- * Verify eventrouter pod is running
- * oc -n openshift-logging get pods | grep -i event
- * Trigger some events

- * oc -n default run evtest --image=busybox --restart=Never -- sleep 1
- * oc -n default delete pod evtest
- * Creation/deletion generates events.
- * Query logs for events
- * In the logging UI/backend, search for the namespace/pod name evtest or eventrouter messages.
- * Explanation: Validates that events are being converted to searchable logs.

NEW QUESTION # 38

Add tolerations to a deployment

Task Information : Update payments/api deployment to tolerate dedicated=payments:NoSchedule.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Patch deployment with toleration
- * oc -n payments patch deploy api --type=merge -p '{
- * "spec":{"template":{"spec":{"tolerations":[
- * {"key":"dedicated","operator":"Equal","value":"payments","effect":"NoSchedule"}
- *]}}}
- * }'
- * Toleration allows pods to schedule onto tainted nodes.
- * Verify scheduling
- * oc -n payments get pods -o wide

NEW QUESTION # 39

Resolve group synchronization conflicts (prune stale data)

Task Information : Run group sync with pruning to remove stale OpenShift group memberships that no longer exist in LDAP.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Run group sync with prune controls
- * oc adm groups sync --sync-config=groupsync.yaml --confirm --prune-whitelist=/tmp/whitelist.txt
- * Prune removes stale memberships/groups, but whitelist protects selected groups from pruning.
- * Verify group membership reflects LDAP
- * oc describe group < groupname >
- * Confirms removed users are no longer listed.

NEW QUESTION # 40

Configure BackupStorageLocation and VolumeSnapshotLocation

Task Information : Configure OADP/Velero storage locations and confirm they show as Available.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create a secret for cloud credentials (S3-compatible example)
- * oc -n openshift-adp create secret generic cloud-credentials \
- * --from-file=cloud=/path/to/credentials
- * Velero uses this secret to authenticate to object storage.
- * Create/Update the DataProtectionApplication (DPA)
- * Apply a DPA CR that defines:

- * backupLocations (bucket, endpoint URL, region, etc.)
 - * snapshotLocations (if using snapshots)
 - * Verify BackupStorageLocation and SnapshotLocation
 - * velero backup-location get
 - * velero snapshot-location get
 - * Status should be Available, meaning storage config is valid.
-

NEW QUESTION # 41

Logging Configuration - Configure ClusterLogging in Web Console

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Log in to the OpenShift web console.

This Task is explicitly defined as a GUI workflow.

Step 2: Navigate to Operators .

Installed logging components are managed through the operator framework.

Step 3: Open Installed Operators .

This lists operators already deployed in the cluster.

Step 4: Select Red Hat OpenShift Logging .

This operator manages the cluster logging stack and its custom resources.

Step 5: Open the ClusterLogging instance.

The Task SIMULATION refers to editing the existing ClusterLogging custom resource.

Step 6: Switch to YAML View .

This allows direct editing of the logging custom resource specification.

Step 7: Edit the collection type and set it to vector.

This changes the log collector implementation.

Step 8: Click Save .

The operator will reconcile the resource and apply the updated collector configuration.

Detailed explanation:

The ClusterLogging custom resource controls the logging stack behavior in OpenShift. Changing the collection type to vector updates which collector technology is used for gathering node and container logs. In operator-managed platforms, direct YAML edits to the custom resource are the preferred method for changing managed behavior because the operator then applies and maintains the desired state. This Task tests both navigation skills in the web console and knowledge of where logging behavior is configured. Saving the resource triggers reconciliation, which is a core OpenShift operator pattern: the declared configuration is read and enforced by the operator rather than by manual per-pod changes.

NEW QUESTION # 42

.....

All these features make the EX380 exam practice question the ideal study material for EX380 exam preparation and it is designed to assist you in Red Hat Certified Specialist in OpenShift Automation and Integration (EX380) practice test. We guarantee you that you will not find all these top-rated features anywhere. They are only available with EX380 exam questions format.
