C-CPI-2506 Latest Braindumps Pdf & C-CPI-2506 Valid Guide Files

B. Remove the namespaces.

C. Convert the namespaces to XML

D. Remove the XML prolog.

Answer: B

Explanation:

If no namespace mapping exists, you must remove the namespaces to access individual entities of an HTTP call over XPath. Namespaces are prefixes that identify the source or context of an XML element or attribute. If the namespaces are not mapped to a URI, they can cause errors or conflicts when using XPath expressions. Therefore, you must remove the namespaces before applying XPath queries. Modernize Integration with SAP Integration Suite | openSAP

10.What are the maturity levels of the SAP Integration Solution Advisory Method-ology? Note: There are 2 answers to this question.

A. Enable your integration structure.

B. Design your hybrid integration platform.

C. Assess your integration strategy

D. Implement your integration architectural strategy.

Answer: B, C

Explanation:

The maturity levels of the SAP Integration Solution Advisory Methodology are as follows:

Assess your integration strategy. This level helps you evaluate your current integration landscape and identify the gaps and challenges that need to be addressed.

Design your hybrid integration platform. This level helps you define your target integration architecture and select the best-fit integration technologies and tools for your scenarios.

Implement your integration architectural strategy. This level helps you execute your integration projects and deliver value to your business.

Enable your integration structure. This level helps you establish a governance model and best practices for your integration operations and maintenance.

11.In the SAP Integration Suite, where can you change the virtual host name?

A. Discover - APIs

B. Design APIs

C. Configure APIs

D. Settings APIs

Answer: D

Explanation:

In the SAP Integration Suite, you can change the virtual host name in the Settings APIs. The Settings APIs allow you to configure various aspects of your API provider, such as the virtual host name, the base path, the authentication method, and the CORS settings.

C-CPI-2506 Valid Guide Files | C-CPI-2506 Valid Test Forum

To assimilate those useful knowledge better, many customers eager to have some kinds of C-CPI-2506 practice materials worth

practicing. All content is clear and easily understood in our C-CPI-2506 practice materials. They are accessible with reasonable prices and various versions for your option. All content are in compliance with regulations of the C-CPI-2506 Exam. As long as you are determined to succeed, our C-CPI-2506 study guide will be your best reliance.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 2	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 3	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 4	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.

SAP Certified Associate - Integration Developer Sample Questions (Q23-Q28):

NEW QUESTION # 23
You have set up a basic authentication policy, but the API proxy returns an HTTP status of 401. What could be a reason?

- A. In the AssignMessage policy, the AssignTo tag has the type="postFlow"
- B. In the AssignMessage policy, the AssignTo tag has the type="request"
- C. In the AssignMessage policy, the AssignTo tag has the type="preflow"
- D. In the AssignMessage policy, the Assign To tag has the type="response"

Answer: D

Explanation:
A possible reason why the API proxy returns an HTTP status of 401 after setting up a basic authentication policy is that in the AssignMessage policy, the AssignTo tag has the type="response". This means that the basic authentication value is assigned to the response header instead of the request header. This will cause an authentication failure when calling the backend server or service that requires basic authentication. To fix this issue, you should change the type attribute of the AssignTo tag to type="request". This will ensure that the basic authentication value is assigned to the request header before sending it to the target endpoint. Reference: Basic Authentication | SAP Help Portal, Assign Message Policy | SAP Help Portal

NEW QUESTION # 24
Which Clean Core Approach principle promotes the isolation of cutom code from standard SAP functionality?

- A. Promote modular design.
- B. Prioritize code reusability.
- C. Enforce consistent coding standards.
- D. Maintain separation of concerns.

Answer: D

Explanation:
The Clean Core Approach emphasizes keeping the SAP digital core free from modifications and isolating custom code:
Separation of Concerns # Custom logic/extensions are isolated from SAP standard functionality, ensuring upgrades and innovations are not disrupted.
Other principles (modular design, coding standards, reusability) are good practices but not specifically tied to Clean Core's goal of isolating custom code.
Thus, the correct principle is Maintain separation of concerns.

NEW QUESTION # 25
Which messaging patterns does SAP Event Mesh support for asynchronous communication?

- A. Request/reply messaging and multicast messaging
- B. Publish/subscribe and point-to-point messaging
- C. Publish/subscribe and request/reply messaging
- D. Point-to-point and multicast messaging

Answer: B

Explanation:
SAP Event Mesh supports two key asynchronous messaging patterns:
Publish/Subscribe # Producers publish an event once, multiple subscribers consume independently.
Point-to-Point (Queue-based) # Messages sent from one producer to a single consumer via a queue.
Other options are incorrect:
Request/Reply # Synchronous pattern, not the focus of Event Mesh.
Multicast messaging # Not explicitly supported; handled through Pub-Sub.
Thus, Event Mesh supports Publish/Subscribe and Point-to-Point messaging patterns.

NEW QUESTION # 26
You download the Performance-Traceability policy from the SAP Business Accelerator Hub and implement it in an API proxy. What can you use to view the data covered the policy?

- A. A third party monitoring tool
- B. SAP Analytics Cloud
- C. SAP Cloud ALM
- D. The API monitor under Monitor# Integration APIs

Answer: D

Explanation:
When you implement the Performance-Traceability policy in API Management:
It enables detailed monitoring of API calls, including latency, performance metrics, and message traces.
This data is available in the API Monitor (Monitor # Integration APIs) within the SAP Integration Suite cockpit.
Other options:
SAP Cloud ALM # General monitoring, not API trace-specific.
Third-party monitoring # Possible but not where SAP policy data is viewed.
SAP Analytics Cloud # For analytics, not direct monitoring of API proxy performance.
Thus, the correct monitoring location is API monitor under Monitor # Integration APIs.

NEW QUESTION # 27
Why does the API Management capability of the SAP Integration Suite require API providers?

- A. To incorporate APIs from source systems
- B. To create authenticated API instances
- C. To create APIs

Answer: A

Explanation:

In API Management (Integration Suite):

API Providers represent backend systems (e.g., SAP S/4HANA, SuccessFactors, third-party APIs).

They are required to connect and incorporate APIs from those systems into API Management.

Once defined, API Proxies are created from API Providers to expose APIs securely.

Other options:

Authentication is handled via policies, not API Providers.

APIs are created as API Proxies, not directly by Providers.

Thus, the purpose of API Providers is to incorporate APIs from source systems.

NEW QUESTION # 28

......

The SAP Certified Associate - Integration Developer (C-CPI-2506) study material of Prep4away is available in three different and easy-to-access formats. The first one is printable and portable SAP Certified Associate - Integration Developer (C-CPI-2506) PDF format. With the PDF version, you can access the collection of actual SAP Certified Associate - Integration Developer (C-CPI-2506) questions with your smart devices like smartphones, tablets, and laptops. You can even print the study material and save it in your smart devices to study anywhere and pass the SAP Certified Associate - Integration Developer (C-CPI-2506) certification exam.
