High-quality E_S4CPE_2405 Actual Braindumps | Amazing Pass Rate For E_S4CPE_2405 Exam | Pass-Sure E_S4CPE_2405: SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition

The SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition E_S4CPE_2405 certification offers a great opportunity for beginners and professionals to demonstrate their skills and abilities to perform a certain task. For the complete, comprehensive, for SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition E_S4CPE_2405 Exam Preparation you can get assistance from SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Exam Questions.

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q48-Q53):

NEW QUESTION # 48

How do you set up SAP Test Automation by Tricentis for a customer?

- A. With an API from the SAP Business Accelerator Hub
- B. With an app in SAP Business Technology Platform
- C. With an integration package from SAP Signavio Process Navigator
- D. With an app in SAP Cloud ALM

Answer: D

Explanation:

To set up SAP Test Automation by Tricentis for a customer, utilize the SAP Cloud ALM platform. SAP Cloud ALM provides integrated test automation capabilities powered by Tricentis, enabling efficient test management and execution within the SAP environment.

Option A: With an app in SAP Business Technology Platform

This option is incorrect. While SAP Business Technology Platform offers various services, test automation setup with Tricentis is

NEW QUESTION # 49

Which tool migrates the database and converts the data during a system conversion to SAP S/4HANA Cloud Private Edition?

- A. SAP Data Services
- B. SAP S/4HANA migration cockpit
- C. Software Update Manager
- D. Custom Code Migration app

Answer: B

NEW QUESTION # 50

Which of the following systems is provided to you only via the SUM tool in a system conversion?

- A. SAP Signavio Process Collaboration Hub
- **B. SAP S/4HANA Cloud Private Edition**
- C. SAP Signavio Process Manager
- D. SAP Business Technology Platform

Answer: B

Explanation:

In a system conversion scenario, the Software Update Manager (SUM) tool is employed to transition existing systems to SAP S/4HANA Cloud, private edition. This process involves upgrading the current system to the SAP S/4HANA Cloud, private edition environment.

Option A: SAP Signavio Process Collaboration Hub

This option is incorrect. The SAP Signavio Process Collaboration Hub is a tool for process collaboration and management, not directly involved in system conversion.

Option B: SAP Business Technology Platform

This option is incorrect. SAP Business Technology Platform serves as a platform for integrating and extending SAP applications but is not the tool used for system conversion.

Option C: SAP Signavio Process Manager

This option is incorrect. The SAP Signavio Process Manager is used for process modeling and analysis, not for system conversion.

Option D: SAP S/4HANA Cloud Private Edition

This option is correct. The SUM tool facilitates the conversion of existing systems to SAP S/4HANA Cloud, private edition, ensuring a smooth transition to the new environment.

Therefore, in a system conversion, the SUM tool is utilized to migrate the system to SAP S/4HANA Cloud Private Edition.

NEW QUESTION # 51

How do you move extensions between SAP S/4HANA Cloud Private Edition systems? Note: There are 2 correct answers to this question.

- **A. Import the collection**
- B. Assign items to a software package
- C. Mark items relevant for transport
- **D. Assign items to a software collection**

Answer: A,D

Explanation:

Moving extensions between SAP S/4HANA Cloud Private Edition systems (e.g., from development to quality or production) involves a managed transport process, especially under the Clean Core principle and RISE with SAP. For Private Edition, extensions can include in-app customizations or side-by-side developments. Let's evaluate the options:

* A. Import the collection: This is correct. In SAP S/4HANA Cloud Private Edition, extensions (e.g., custom fields, logic) are transported using software collections. Once a collection is exported from the source system, it is imported into the target system (e.g., via the "Export Customizing Transports" and "Import Collection" apps in Fiori). This is a standard process for moving in-app extensions.

* B. Mark items relevant for transport: This is incorrect. While marking items for transport is a concept in traditional ABAP systems (e.g., ECC), it's not the primary mechanism for SAP S/4HANA Cloud Private Edition. The cloud model uses collections rather than individual transport flags for in-app extensions.

* C. Assign items to a software collection: This is also correct. In the extensibility process, key users or administrators assign extension items (e.g., custom fields, business objects) to a software collection using tools like the "Manage Software Collections" Fiori app. This collection is then exported and imported, enabling the movement of extensions between systems.

* D. Assign items to a software package: This is incorrect. Software packages are used in traditional ABAP development (e.g., via Eclipse) for side-by-side extensions, not for in-app key-user extensions in SAP S/4HANA Cloud Private Edition. The cloud transport process relies on collections, not packages.

In summary, Import the collection and Assign items to a software collection are the steps to move extensions between SAP S/4HANA Cloud Private Edition systems.

NEW QUESTION # 52

What is in scope of Fit-to-Standard workshops in a new implementation? Note: There are 2 correct answers to this question.

- A. Providing feedback if changes are necessary to make the process fit the customer's needs
- B. Completing the user acceptance testing on the business processes
- C. Teaching the customer LOB experts how to navigate end-to-end business processes
- D. Estimating relative effort of the planned changes

Answer: A,C

Explanation:

Fit-to-Standard workshops are a cornerstone of the SAP Activate Methodology for a new implementation of SAP S/4HANA Cloud Private Edition. These workshops, conducted during the Explore phase, aim to align customer requirements with SAP's standard processes. Let's evaluate the options:

* A. Teaching the customer LOB experts how to navigate end-to-end business processes: This is correct. A primary goal of Fit-to-Standard workshops is to educate customer line-of-business (LOB) experts on SAP S/4HANA's standard end-to-end processes (e.g., order-to-cash, procure-to-pay).

Consultants demonstrate these processes in a sandbox system, enabling customers to understand the system's capabilities and how they align with their business needs.

* B. Estimating relative effort of the planned changes: This is incorrect. While effort estimation for gaps or customizations may occur later (e.g., in backlog prioritization), it's not a core activity of Fit-to-Standard workshops. The focus is on exploring standard processes and identifying gaps, not detailed effort planning.

* C. Completing the user acceptance testing on the business processes: This is incorrect. User acceptance testing (UAT) occurs in the Realize or Deploy phase, not during Fit-to-Standard workshops in the Explore phase. These workshops are about analysis and alignment, not formal testing.

* D. Providing feedback if changes are necessary to make the process fit the customer's needs: This is also correct. During the workshops, customers and consultants collaboratively assess whether the standard processes meet requirements. If gaps are identified, feedback is provided to determine necessary changes (e.g., configuration, extensions), which are then documented for the Realize phase.

In summary, the scope of Fit-to-Standard workshops in a new implementation includes A (Teaching the customer LOB experts how to navigate end-to-end business processes) and D (Providing feedback if changes are necessary to make the process fit the customer's needs).
