

Neueste Associate-Data-Practitioner Pass Guide & neue Prüfung Associate-Data-Practitioner braindumps & 100% Erfolgsquote

2025 Die neuesten Pass4Test Associate-Data-Practitioner PDF-Versionen Prüfungsfragen und Associate-Data-Practitioner Fragen und Antworten sind kostenlos verfügbar: <https://drive.google.com/open?id=1Jq3puBiMAY9PK8salrw9KDiSU2TLrqQy>

Heute, wo das Internet schnell entwickelt, ist es ein übliches Phänomen, Online-Ausbildung zu wählen. Pass4Test ist eine der vielen Online-Ausbildungswebsites. Pass4Test hat langjährige Erfahrungen und kann den Kandidaten die Lernmaterialien von guter Qualität zur Google Associate-Data-Practitioner Zertifizierungsprüfung bieten, um ihre Bedürfnisse abzudecken.

Google Associate-Data-Practitioner Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Data Management: This domain measures the skills of Google Database Administrators in configuring access control and governance. Candidates will establish principles of least privilege access using Identity and Access Management (IAM) and compare methods of access control for Cloud Storage. They will also configure lifecycle management rules to manage data retention effectively. A critical skill measured is ensuring proper access control to sensitive data within Google Cloud services
Thema 2	• Data Preparation and Ingestion: This section of the exam measures the skills of Google Cloud Engineers and covers the preparation and processing of data. Candidates will differentiate between various data manipulation methodologies such as ETL, ELT, and ETLT. They will choose appropriate data transfer tools, assess data quality, and conduct data cleaning using tools like Cloud Data Fusion and BigQuery. A key skill measured is effectively assessing data quality before ingestion.
Thema 3	• Data Analysis and Presentation: This domain assesses the competencies of Data Analysts in identifying data trends, patterns, and insights using BigQuery and Jupyter notebooks. Candidates will define and execute SQL queries to generate reports and analyze data for business questions. Data Pipeline Orchestration: This section targets Data Analysts and focuses on designing and implementing simple data pipelines. Candidates will select appropriate data transformation tools based on business needs and evaluate use cases for ELT versus ETL.

Associate-Data-Practitioner Probesfragen - Associate-Data-Practitioner Lernhilfe

Google Associate-Data-Practitioner Unterlagen von Pass4Test sind besser als andere entsprechende Unterlagen für Google

Associate-Data-Practitioner Prüfung, weil sie einmaligen Erfolg der Prüfung gewährleisten. Die hohe Durchlaufzeit sind von vielen Kandidaten geprüft. Google Associate-Data-Practitioner Dumps von Pass4Test sind der erfolgreiche Weg. Sie können viel Zeit für die Vorbereitung der Associate-Data-Practitioner Prüfung sparen und auch mit guter Note die Associate-Data-Practitioner Zertifizierungsprüfung machen.

Google Cloud Associate Data Practitioner Associate-Data-Practitioner Prüfungsfragen mit Lösungen (Q73-Q78):

73. Frage

You need to design a data pipeline to process large volumes of raw server log data stored in Cloud Storage. The data needs to be cleaned, transformed, and aggregated before being loaded into BigQuery for analysis. The transformation involves complex data manipulation using Spark scripts that your team developed. You need to implement a solution that leverages your team's existing skillset, processes data at scale, and minimizes cost. What should you do?

- A. Use Dataflow with a custom template for the transformation logic.
- B. Use Cloud Data Fusion to visually design and manage the pipeline.
- C. Use Dataform to define the transformations in SQLX.
- **D. Use Dataproc to run the transformations on a cluster.**

Antwort: D

Begründung:

Comprehensive and Detailed In-Depth Explanation:

The pipeline must handle large-scale log processing with existing Spark scripts, prioritizing skillset reuse, scalability, and cost. Let's break it down:

* Option A: Dataflow uses Apache Beam, not Spark, requiring script rewrites (losing skillset leverage).

Custom templates scale well but increase development cost and effort.

* Option B: Cloud Data Fusion is a visual ETL tool, not Spark-based. It doesn't reuse existing scripts, requiring redesign, and is less cost-efficient for complex, code-driven transformations.

* Option C: Dataform uses SQLX for BigQuery ELT, not Spark. It's unsuitable for pre-load transformations of raw logs and doesn't leverage Spark skills.

74. Frage

You have a BigQuery dataset containing sales data

a. This data is actively queried for the first 6 months. After that, the data is not queried but needs to be retained for 3 years for compliance reasons. You need to implement a data management strategy that meets access and compliance requirements, while keeping cost and administrative overhead to a minimum. What should you do?

- A. Set up a scheduled query to export the data to Cloud Storage after 6 months. Write a stored procedure to delete the data from BigQuery after 3 years.
- B. Use BigQuery long-term storage for the entire dataset. Set up a Cloud Run function to delete the data from BigQuery after 3 years.
- C. Store all data in a single BigQuery table without partitioning or lifecycle policies.
- **D. Partition a BigQuery table by month. After 6 months, export the data to Coldline storage. Implement a lifecycle policy to delete the data from Cloud Storage after 3 years.**

Antwort: D

Begründung:

Partitioning the BigQuery table by month allows efficient querying of recent data for the first 6 months, reducing query costs. After 6 months, exporting the data to Coldline storage minimizes storage costs for data that is rarely accessed but needs to be retained for compliance. Implementing a lifecycle policy in Cloud Storage automates the deletion of the data after 3 years, ensuring compliance while reducing administrative overhead. This approach balances cost efficiency and compliance requirements effectively.

75. Frage

You have created a LookML model and dashboard that shows daily sales metrics for five regional managers to use. You want to ensure that the regional managers can only see sales metrics specific to their region. You need an easy-to-implement solution. What should you do?

- A. Create `asales_regionuser` attribute, and assign each manager's region as the value of their user attribute. Add an `access_filterExplore` filter on the `region_name` dimension by using the `sales_regionuser` attribute.
- B. Create separate Looker dashboards for each regional manager. Set the default dashboard filter to the corresponding region for each manager.
- C. Create five different Explores with the `sql_always_filterExplore` filter applied on the `region_name` dimension. Set each `region_name` value to the corresponding region for each manager.
- D. Create separate Looker instances for each regional manager. Copy the LookML model and dashboard to each instance. Provision viewer access to the corresponding manager.

Antwort: A

Begründung:

Using `asales_region` user attribute is the best solution because it allows you to dynamically filter data based on each manager's assigned region. By adding an `access_filterExplore` filter on the `region_name` dimension that references the `sales_regionuser` attribute, each manager sees only the sales metrics specific to their region. This approach is easy to implement, scalable, and avoids duplicating dashboards or Explores, making it both efficient and maintainable.

76. Frage

Your organization sends IoT event data to a Pub/Sub topic. Subscriber applications read and perform transformations on the messages before storing them in the data warehouse. During particularly busy times when more data is being written to the topic, you notice that the subscriber applications are not acknowledging messages within the deadline. You need to modify your pipeline to handle these activity spikes and continue to process the messages. What should you do?

- A. Seek back to the last acknowledged message.
 - B. Forward unacknowledged messages to a dead-letter topic.
 - C. Retry messages until they are acknowledged.
- B Implement flow control on the subscribers

Antwort: B

Begründung:

Implementing flow control on the subscribers allows the subscriber applications to manage message processing during activity spikes by controlling the rate at which messages are pulled and processed. This prevents overwhelming the subscribers and ensures that messages are acknowledged within the deadline. Flow control helps maintain the stability of your pipeline during high-traffic periods without dropping or delaying messages unnecessarily.

77. Frage

Your team uses Google Sheets to track budget data that is updated daily. The team wants to compare budget data against actual cost data, which is stored in a BigQuery table. You need to create a solution that calculates the difference between each day's budget and actual costs. You want to ensure that your team has access to daily-updated results in Google Sheets. What should you do?

- A. Download the budget data as a CSV file, and upload the CSV file to create a new BigQuery table. Join the actual cost table with the new BigQuery table, and save the results as a CSV file. Open the CSV file in Google Sheets.
- B. Create a BigQuery external table by using the Drive URI of the Google sheet, and join the actual cost table with it. Save the joined table as a CSV file and open the file in Google Sheets.
- C. Download the budget data as a CSV file and upload the CSV file to a Cloud Storage bucket. Create a new BigQuery table from Cloud Storage, and join the actual cost table with it. Open the joined BigQuery table by using Connected Sheets.
- D. Create a BigQuery external table by using the Drive URI of the Google sheet, and join the actual cost table with it. Save the joined table, and open it by using Connected Sheets.

Antwort: D

Begründung:

Comprehensive and Detailed in Depth Explanation:

Why D is correct: Creating a BigQuery external table directly from the Google Sheet allows for real-time updates.

Joining the external table with the actual cost table in BigQuery performs the calculation.

Connected Sheets allows the team to access and analyze the results directly in Google Sheets, with the data being updated.

Why other options are incorrect: A: Saving as a CSV file loses the live connection and daily updates.

B: Downloading and uploading as a CSV file adds unnecessary steps and loses the live connection.
C: Same issue as B, losing the live connection.

78. Frage
