# Quiz 2026 Salesforce Latest Analytics-Admn-201: Salesforce Certified Tableau Server Administrator Pass Leader Dumps

The language of our Analytics-Admn-201 qualification test guide is simple. The learners may come from many social positions and their abilities to master our Analytics-Admn-201 test materials are varied. Based on this consideration we apply the most simple and easy-to-be-understood language to help the learners no matter he or she is the students or the in-service staff, the novice or the experienced employee which have worked for many years. Analytics-Admn-201 Certification guide use the simple language to explain the answers and detailed knowledge points to help pass the Analytics-Admn-201 exam.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 2	• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 3	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 4	• Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.

Topic 5	• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

Salesforce Analytics-Admn-201 Pass Leader Dumps: Salesforce Certified Tableau Server Administrator - Fast2test Gives Warm Service & Excellent Torrent

Before you try to attend the Analytics-Admn-201 practice exam, you need to look for best learning materials to easily understand the key points of Analytics-Admn-201 exam prep. There are Analytics-Admn-201 real questions available for our candidates with accurate answers and detailed explanations. We are ready to show you the most reliable Analytics-Admn-201 PDF VCE and the current exam information for your preparation of the test.

Salesforce Certified Tableau Server Administrator Sample Questions (Q25-Q30):

NEW QUESTION # 25
What should you do to disable table recommendations for popular data sources and tables to users?

- A. Publish data sources only to projects with permissions locked to the project
- B. Use the command: tsm configuration set -k recommendations.enabled -v false
- C. Disable the option using the site Settings page
- D. Disable the option using the server Settings page

Answer: C

Explanation:
Table recommendations in Tableau Server suggest popular tables and data sources to users when they create new content in the web authoring environment. This feature is enabled by default but can be disabled at the site level.
Option A (Disable the option using the site Settings page): Correct. A site administrator can disable table recommendations by navigating to the site's Settings > General page in the Tableau Server web interface and unchecking the option "Enable table recommendations." This prevents users on that site from seeing these suggestions, offering a straightforward UI-based solution.
Option B (Use the command: tsm configuration set -k recommendations.enabled -v false): Incorrect. There is no recommendations.enabled key in the TSM configuration settings. This feature is managed per site, not server-wide via TSM.
Option C (Publish data sources only to projects with permissions locked): Incorrect. Locking permissions restricts access but doesn't disable the recommendation feature itself. Users with access would still see recommendations.
Option D (Disable the option using the server Settings page): Incorrect. Table recommendations are a site- specific setting, not a server-wide setting. The server Settings page (via TSM) controls global configurations, not this feature.
Reference: Tableau Server Documentation - "Manage Site Settings" (https://help.tableau.com/current/server /en-us/site_settings.htm).

NEW QUESTION # 26
You need to verify the status of the Coordination Service ensemble in a high-availability (HA) Tableau Server cluster. What should you do?

- A. Examine the Tableau Services Manager (TSM) web client Status page
- B. Run the command tsm maintenance ziplogs
- C. Run the command tsm status -v
- D. Examine the Tableau Server Status page

Answer: C

Explanation:

In an HA Tableau Server cluster, the Coordination Service (ZooKeeper ensemble) maintains cluster state- let's find the best way to check it:
* Coordination Service:
* Runs on multiple nodes (3 or 5 in HA) to ensure quorum and failover.
* Status indicates if it's running and synced-critical for cluster health.
* Option C (Run tsm status -v): Correct.
* Details: tsm status --verbose lists all processes across nodes, including Coordination Service (e. g., "Coordination Service: RUNNING").
* Why Best: Provides detailed, node-specific status in the CLI-e.g., "Node 1: RUNNING, Node 2: RUNNING."
* Use: Run on the initial node; -v ensures full output.
* Option A (TSM web client Status page): Incorrect.
* Why: The TSM UI (Server > Status) shows process counts (e.g., "Coordination Service: 3 instances"), but not detailed per-node status-less granular than CLI.
* Option B (tsm maintenance ziplogs): Incorrect.
* Why: Generates log archives for troubleshooting, not a real-time status check.
* Option D (Tableau Server Status page): Incorrect.
* Why: The Server Status page (Server > Status in the web UI) monitors application processes (e. g., VizQL), not TSM's Coordination Service.
Why This Matters: Coordination Service health ensures HA stability-tsm status -v is the admin's go-to for precision.
Reference: Tableau Server Documentation - "Check Server Status" (https://help.tableau.com/current/server/en- us/tsm_status.htm).

NEW QUESTION # 27
Which two commands are valid and complete commands? (Choose two.)

- A. tsm maintenance cleanup
- B. tsm maintenance restore
- C. tsm maintenance ziplogs
- D. tsm maintenance backup

Answer: A,C

Explanation:
TSM commands manage Tableau Server maintenance-let's validate their syntax:
* Command Requirements:
* Some need arguments (e.g., file paths); others are standalone.
* Valid and Complete: Must work as-is without errors.
* Option C (tsm maintenance cleanup): Correct.
* Details: Removes temporary files and old logs-no arguments required (optional flags like -l exist).
* Use: tsm maintenance cleanup-runs fully.
* Option D (tsm maintenance ziplogs): Correct.
* Details: Creates a zip of logs (e.g., tsm-logs.zip)-no arguments needed (optional -d for date range).
* Use: tsm maintenance ziplogs-complete and valid.
* Option A (tsm maintenance backup): Incorrect.
* Why: Requires -f <filename>.tsbak (e.g., tsm maintenance backup -f backup.tsbak)-incomplete without it.
* Option B (tsm maintenance restore): Incorrect.
* Why: Needs -f <filename>.tsbak (e.g., tsm maintenance restore -f backup.tsbak)-not standalone.
Why This Matters: Correct syntax ensures maintenance tasks execute without errors-critical for server health.
Reference: Tableau Server Documentation - "TSM Maintenance Commands" (https://help.tableau.com/current /server/en-us/cli_maintenance_tsm.htm).

NEW QUESTION # 28
When you use trusted tickets in Tableau Server, users can:

- A. Encrypt database connections
- B. Access embedded views without being prompted for credentials
- C. Embed database credentials
- D. Save and edit workbooks

Answer: B

Explanation:
Trusted Tickets is an authentication method in Tableau Server for embedding views in external applications (e.g., portals) without requiring users to log in manually. Here's how it works:
* A trusted application (e.g., a web server) authenticates with Tableau Server using a trusted IP or username/password.
* Tableau Server issues a temporary ticket (a unique string).
* The ticket is embedded in a view URL (e.g., /trusted/<ticket>/views/...), granting access to the view for a short period (configurable, default 5 minutes).
* Option A (Access embedded views without being prompted for credentials): Correct. Trusted tickets enable SSO-like behavior for embedded content, bypassing the login prompt if the ticket is valid. This is ideal for seamless integration into external systems.
* Option B (Encrypt database connections): Incorrect. Encryption is handled by data source configurations (e.g., SSL), not trusted tickets, which focus on user authentication.
* Option C (Save and edit workbooks): Incorrect. Trusted tickets grant view access, not edit permissions-those depend on the user's site role and permissions.
* Option D (Embed database credentials): Incorrect. Trusted tickets authenticate users to Tableau Server, not databases-database credentials are managed separately in the data source.
Why This Matters: Trusted tickets simplify embedding Tableau content securely in custom applications, enhancing user experience.
Reference: Tableau Server Documentation - "Trusted Authentication" (https://help.tableau.com/current/server /en-us/trusted_auth.htm).

NEW QUESTION # 29
You attempt to delete a user who owns content on a Tableau Server. What is the result of the delete action?

- A. The user is deleted, and the user's content is reassigned to the project leader
- B. The user is switched to an Unlicensed site role and is NOT deleted
- C. The user and all of the user's content is deleted
- D. The user is deleted, and the user's content is reassigned to the server administrator

Answer: B

Explanation:
Deleting a user in Tableau Server involves handling their owned content (workbooks, data sources)-let's analyze the process:
* Deletion Rules:
* Ownership Check: Tableau prevents deletion if the user owns content to avoid orphaning it.
* Action: Instead of deleting, the user's site role is set to Unlicensed, retaining their account and content ownership.
* Resolution: An admin must reassign ownership (e.g., via Users > Actions > Change Owner) before deletion.
* Option D (User switched to Unlicensed and NOT deleted): Correct.
* Details: Attempting deletion (e.g., Users > Select User > Actions > Delete) triggers a check. If content exists, the user becomes Unlicensed-still in the system but unable to log in.
* Why: Protects data integrity-content remains accessible for reassignment.
* Option A (Deleted, content to server admin): Incorrect.
* Why: No automatic reassignment to the server admin-manual action is required first.
* Option B (Deleted, content to project leader): Incorrect.
* Why: Project leaders don't automatically inherit content-no such mechanism exists.
* Option C (User and content deleted): Incorrect.
* Why: Tableau avoids deleting content with the user-too destructive without explicit intent.
Why This Matters: This safeguard prevents accidental data loss, ensuring admins manage ownership transitions deliberately.
Reference: Tableau Server Documentation - "Delete Users" (https://help.tableau.com/current/server/en-us /users_delete.htm).
