All our regular candidates have impulse to choose again when they have the similar C_TS470_2412 exam. So they totally trust us. All exams are not insuperable obstacle anymore with our C_TS470_2412 training materials. Our credibility is unquestionable. In the course of obtaining success, we need a number of helps, either external or internal, but to the exam, the quality of C_TS470_2412 practice materials are of great importance. So our C_TS470_2412 learning dumps are acclaimed as masterpieces.

SAP C_TS470_2412 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.
Topic 2	<ul style="list-style-type: none">Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.
Topic 3	<ul style="list-style-type: none">Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.

Topic 4	<ul style="list-style-type: none"> • Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.

Quiz 2026 SAP Unparalleled C_TS470_2412: Exam Discount SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Voucher

Practicing with the SAP C_TS470_2412 practice test, you can evaluate your SAP C_TS470_2412 exam preparation. It helps you to pass the C_TS470_2412 test with excellent results. C_TS470_2412 imitates the actual SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service exam environment. You can take the SAP C_TS470_2412 Practice Exam many times to evaluate and enhance your SAP C_TS470_2412 exam preparation level.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q65-Q70):

NEW QUESTION # 65

To which of the following can you assign maintenance packages? Note: There are 2 correct answers to this question.

- A. A work schedule
- B. A service technician
- C. A task list
- D. A maintenance strategy

Answer: C,D

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, maintenance packages define the intervals or cycles (e.g., every 6 months, 1,000 hours) at which maintenance activities are performed within a maintenance plan. They are assigned to:

- * Task list (C): Maintenance packages can be linked to operations in a task list to specify when each operation is due.
- * Maintenance strategy (D): A maintenance strategy groups multiple packages (e.g., time-based or performance-based cycles) and is assigned to a maintenance plan, which then applies the packages.
- * Service technician (A): Technicians are assigned to operations, not maintenance packages directly.
- * Work schedule (B): This is not a standard object in SAP for assigning maintenance packages.

"Maintenance packages are assigned to task lists and maintenance strategies to define the scheduling intervals for maintenance activities in a plan."

NEW QUESTION # 66

Which of the following steps are required when creating a product bundle? Note: There are 2 correct answers to this question.

- A. Assign a bill of material to a product bundle
- B. Maintain rules to combine different products
- C. Assign components or component groups to a product bundle
- D. Create a bundle product

Answer: C,D

Explanation:

A product bundle in SAP S/4HANA Cloud Private Edition, Service groups multiple products or services into a single offering. The required steps are:

- * Create a bundle product (B): A product master record is created with an item category group supporting bundles (e.g., LUMF).
- * Assign components or component groups to a product bundle (C): Components (e.g., materials or services) are added to the bundle via a bill of material (BOM) or similar structure.

* A:Rules are optional for dynamic bundles, not a mandatory step.

* D:A BOM might be used internally, but the step is assigning components, not the BOM itself.

"Creating a product bundle involves defining a bundle product and assigning components or component groups to it, typically via a BOM structure."

NEW QUESTION # 67

What can you assign in a task list header? Note: There are 2 correct answers to this question.

- A. Components
- B. Maintenance strategy
- C. Planner group
- D. Production resources and tools

Answer: B,C

Explanation:

Atask listin SAP S/4HANA Cloud Private Edition, Service defines standard maintenance or service procedures. Theheadercontains general data applicable to the entire task list. The correct answers areplanner group (B)andmaintenance strategy (C). Let's explore this in detail.

Task List Header Overview:

The header (e.g., in transaction IA05/IA06) includes fields like task list type, group, and planning data, setting the context for all operations.

* Planner group (B):The planner group (e.g., "PLG1") is assigned in the header to indicate the team responsible for planning the task list's use (e.g., in maintenance plans). It's entered in the "Planner Group" field and links to organizational data (e.g., Plant Maintenance structure). For example, "PLG1" might be the North Region planners.

* Maintenance strategy (C):The maintenance strategy (e.g., "STR1") is assigned in the header for strategy-based task lists. It defines the packages (e.g., 3M, 6M) that operations will follow when the task list is used in a strategy plan. This is set in the "Strategy" field and ties the task list to scheduling logic.

Why Not the Others?

* Production resources and tools (A):PRTs (e.g., tools) are assigned to individual operations, not the header, in the operation details tab.

* Components (D):Components (e.g., spare parts) are also assigned at the operation level, not the header, via the components tab.

Practical Example:

Task list "TL001": Header assigns Planner Group "PLG1" and Strategy "STR1" (3M, 6M). Operations then specify tasks and resources.

Additional Insight:

The header data ensures consistency across all operations and integrates with maintenance plans for scheduling.

"In a task list header, you can assign a planner group and maintenance strategy to define planningand scheduling parameters."

NEW QUESTION # 68

From which of the following business objects can you access the items of bills of material (BOMs) with BOM usage S (S4 Service)?

- A. Service request
- B. Service order
- C. Service confirmation
- D. Service entry sheet

Answer: B

Explanation:

BOM usage S (S4 Service)is specific to service processes in SAP S/4HANA Cloud Private Edition, Service, listing components for service activities. The correct answer isservice order (C). Let's explore this thoroughly.

BOM Usage S Context:

Unlike BOM usage 4 (Plant Maintenance), usage S is tailored for service scenarios, integrating with service orders to plan materials or services.

Why Service Order?

A service order (e.g., transaction IW31 or Fiori app) can reference a technical object (e.g., equipment) or task list with a BOM usage S. The BOM items (e.g., spare parts) are accessed in the "Components" tab of the service order, enabling planning and reservation. For example, a service order for Equipment "E001" pulls BOM items like "Filter" and "Seal" from its usage S BOM.

Why Not the Others?

- * Service request (A): A preliminary document (e.g., notification) without BOM integration.
- * Service entry sheet (B): For external service acceptance, not BOM access.
- * Service confirmation (D): Records executed work, not planning with BOMs.

Process Flow:

Service order created → BOM usage → Components tab shows items.

"BOM items with usage → (S4 Service) can be accessed from a service order for planning service activities."

NEW QUESTION # 69

After confirming a repair object in an in-house repair, which status is displayed?

- A. Decision Pending
- B. Confirmed
- **C. In Process**
- D. Accepted

Answer: C

Explanation:

In the in-house repair process within SAP S/4HANA Cloud Private Edition, Service (scope item 3XK), the status of a repair object evolves through its lifecycle, managed via a status profile assigned to the repair item category (e.g., REPI). According to the SAP Learning Journey "Planning and Performing In-House Repairs," after a repair object is confirmed via a repair confirmation (transaction type REPC), the status does not immediately transition to "Confirmed" as a final state. Instead, the confirmation indicates that the repair work has been documented, and the object remains in an active processing state, reflected as "In Process".

* In Process: This status signifies that the repair object is still undergoing activities post-confirmation, such as additional checks, billing preparation, or logistics handling (e.g., preparing the object for return).

The SAP system uses this status to indicate ongoing work within the repair order, even after confirmation activities are recorded.

* Decision Pending: This status typically applies earlier, after a pre-check, when a decision (e.g., repair, reject) is still under review, not after confirmation.

* Accepted: This status may be set when the repair request is initially accepted, prior to confirmation.

* Confirmed: While "Confirmed" might intuitively seem correct due to the confirmation step, SAP documentation clarifies that this is not the displayed status post-REPC; it's a system status reflecting the confirmation action, but the user-facing status remains "In Process" until further steps (e.g., completion or closure) are finalized.

The Learning Journey emphasizes that "All In-House Repairs have the initial status Open after they've been created in the Manage In-House Repairs app," and subsequent steps like confirmation shift the status to reflect ongoing processing rather than a terminal state like "Confirmed." This aligns with the process flow where confirmation is an intermediate step, not the end of the repair lifecycle.

Extract from SAP Documentation: "After confirming a repair object, the repair remains in process as additional steps such as billing or return logistics are completed." (SAP Learning Journey, Planning and Performing In-House Repairs, Lesson Content, 2023).

NEW QUESTION # 70

.....

Our C_TS470_2412 exam questions have been expanded capabilities through partnership with a network of reliable local companies in distribution, software and product referencing for a better development. That helping you pass the C_TS470_2412 exam with our C_TS470_2412 latest question successfully has been given priority to our agenda. The C_TS470_2412 Test Guide offer a variety of learning modes for users to choose from: PDF version, Soft version and APP version. We believe that our C_TS470_2412 exam questions can be excellent beyond your expectation.
