They have keenly studied the previous Ind-Dev-201 Exam Papers and consulted the sources that contain the updated and latest information on the exam contents. The end result of these strenuous efforts is set of Ind-Dev-201 dumps that are in every respect enlightening and relevant to your to actual needs.

Salesforce Certified Industries CPQ Developer Sample Questions (Q132-Q137):

NEW QUESTION # 132

You can apply context rules to order line Items.

- A. True
- B. False

Answer: A

Explanation:

Context rules can indeed be applied to order line items in Salesforce Industries CPQ. These rules assess the context in which products are sold and apply specific configurations or restrictions based on that context. This capability is crucial for ensuring that products and services are configured and priced correctly according to the specific circumstances of an order, enhancing accuracy and compliance in sales operations.

NEW QUESTION # 133

In Vlocity CME, if you want to regenerate the JSON attribute fields for all products in your product catalog, what job should you run?

Note: This question displayed answer options in random order when taking this Test.

- A. ResolveProductHierarchyBatchJob, which can be run via the Product Hierarchy Maintenance function on the CMT Administration screen.
- B. ProductAttributesBatchProcessor, which can be run via the Refresh Pricebook function on the CMT Administration screen.
- C. EPCProductAttribJSONBatchJob, accessible in Vlocity University's training orgs via the Process Attributes button.
- D. ProductHierarchyBatchProcessor, which can be run via the Refresh Pricebook function on the CMT Administration screen.

Answer: C

Explanation:

In the context of Vlocity CME, to regenerate the JSON attribute fields for all products in your product catalog, the job to run is:

* A. EPCProductAttribJSONBatchJob: This job is specifically designed to handle the regeneration of JSON attribute fields within the product catalog. It can typically be accessed in training environments such as those provided by Vlocity University through the "Process Attributes" button. This job processes the attributes and ensures they are up-to-date and correctly formatted, which is vital for maintaining the functional integrity of product configurations.

NEW QUESTION # 134

In Guided Selling, which of these is the class for the remote methods?

Note: This question displayed answer options in random order when taking this Test.

- A. getCartItems
- B. getCartProducts
- C. putCartItems
- D. checkout
- E. CpqAppHandler
- F. createCart
- G. postCartItems
- H. done
- I. submit
- J. vlcCart

Answer: E

Explanation:

In Salesforce Industries CPQ's Guided Selling, CpqAppHandler is the class typically used for remote methods. This class includes functions that are designed to handle complex interactions with the CPQ application, facilitating various backend processes necessary for the CPQ workflow. These remote methods could include anything from managing the cart, handling pricing calculations, to updating product configurations, making it integral to the seamless operation of guided selling scenarios.

NEW QUESTION # 135

In Guided Selling, in order to ensure that your script will be portable from your dev org to your production org, you should specify the price list by:

Note: This question displayed answer options in random order when taking this Test.

- **A. Include the price list Id in the vlcCart settings.**
- B. Include a key/value pair in the remote action containing the remote method createCart.
- C. Create a key/value pair with SObject being the key and %pricelistId% being the value.
- D. Using a DataRaptor to retrieve the price list Id.

Answer: A

Explanation:

In Guided Selling, to ensure portability of scripts from a development org to a production org, specifying the price list in the vlcCart settings is a recommended practice. By including the price list ID directly within these settings, the script remains independent of hard-coded identifiers, which might change between different Salesforce environments. This approach ensures that the cart can dynamically reference the correct price list ID, regardless of the deployment environment, thus maintaining consistency and reducing errors during migrations.

NEW QUESTION # 136

What is the primary reason to apply an entity filter to an action in Vlocity Rule Builder?

- **A. To qualify each action applied during rule processing**
- B. To enable eligibility rules for promotions
- C. To ensure the entity filter used to "find the group" in Vlocity Rule Builder correctly processed the members
- D. Entity filters cannot be applied to an action

Answer: A

Explanation:

The primary reason to apply an entity filter to an action in Vlocity Rule Builder is:

* A. To qualify each action applied during rule processing: Entity filters are used to define conditions under which specific actions should be executed during the rule processing phase. This ensures that actions are only taken when relevant, based on the specific attributes or status of entities involved in the process.

NEW QUESTION # 137

.....
