Zscaler certification is one of the best golden-content certifications in IT expert field all over the world, and it is also the necessary condition of choosing talents standard in large enterprises. ZDTE exam questions answers is useful for candidates who are eager to go through the examination. There are thousands of companies recognized and valued the certification in the world. ZDTE Exam Questions Answers will make you pass exam easily.

Zscaler ZDTE Exam Syllabus Topics:

Topic	Details
Topic 1	Access Control Services: Focuses on controlling and enforcing user access to applications and resources.
Topic 2	Platform Services: Details the core platform functionalities that enable security, scalability, and reliability.
Topic 3	Risk Management: Focuses on identifying, assessing, and mitigating risks to users and organizational assets.
Topic 4	Identify Services: Explains how user identities are managed and integrated within Zscaler services.
Topic 5	Zscaler Architecture: Focuses on the overall design, components, and deployment models of the Zscaler platform.
Topic 6	Cyberthreat Protection Services: Covers mechanisms for detecting, preventing, and mitigating cyber threats in real time.
Topic 7	Connectivity Services: Covers methods and technologies for connecting users and devices securely to the Zscaler cloud.
Topic 8	Zscaler Digital Experience: Covers monitoring and optimizing user experience across applications and network connections.

Topic 9	• Data Protection Services: Explains how sensitive data is secured, monitored, and managed within the platform.
Topic 10	• Zscaler for Users - Engineer Overview: Covers the foundational understanding of Zscaler services from a user perspective and the engineer's role in managing them.

ZDTE Authorized Certification - ZDTE Test Result

Our ZDTE study tool can help you obtain the ZDTE certification and own a powerful weapon for your interview. Our ZDTE qualification test will help you gain recognition with true talents and better adapted to society. Now, I would like to give you a brief introduction in order to make you deepen your impression of our ZDTE test guides. Our ZDTE test guides have a higher standard of practice and are rich in content. If you are anxious about how to get ZDTE certification, considering purchasing our ZDTE study tool is a wise choice and you will not feel regretted. Our learning materials will successfully promote your acquisition of certification.

Zscaler Digital Transformation Engineer Sample Questions (Q59-Q64):

NEW QUESTION # 59

How many key engines does the Zscaler Firewall Module have?

- A. Four
- B. Three
- C. Five
- D. Two

Answer: A

Explanation:

In the Zscaler for Users - Engineer path, the Zscaler Cloud Firewall (Firewall Module in ZIA) is described as being built around four key engines. The training emphasizes that the firewall is not a single, monolithic filter but a set of parallel inspection engines that collectively provide advanced Layer 3/4 control, application and service awareness, DNS security, and inline threat prevention. These engines evaluate traffic simultaneously, and the most restrictive outcome is applied, aligning with Zscaler's broader "parallel processing" model for policy enforcement.

The curriculum highlights that this multi-engine design allows Zscaler to go beyond traditional firewalls, combining user and application awareness with security controls such as IPS and DNS-based protection within the same cloud-native enforcement stack. Having four coordinated engines enables granular, identity- based firewall policies that work for users regardless of location, without the need for separate appliances.

Options suggesting two, three, or five engines do not match the way the Firewall Module is presented in the ZDTE/EDU-202 materials. Therefore, the correct answer, and the number you are expected to know for the exam, is four.

NEW QUESTION # 60

What capabilities within Zscaler External Attack Surface Management (EASM) are specifically designed to uncover and assess domains that are intentionally created to resemble your legitimate brand or websites?

- A. Fake Domains
- B. Mimic Domains
- C. Lookalike Domains
- D. Spoofing Domains

Answer: C

Explanation:

Zscaler External Attack Surface Management (EASM) includes a dedicated capability called Lookalike Domains. Zscaler defines lookalike domains as fraudulent or fake domains intentionally created by threat actors to mimic your legitimate domains and brand presence, often for phishing, credential theft, or brand abuse.

Within the EASM portal, the Lookalike Domains pages and widgets present a curated list of suspicious domains that closely

resemble your seed or official domains. Analysts can review exposure scores, registrar details, hosting information, and other attributes to determine which of these domains pose the highest risk and warrant takedown or additional monitoring. This feature is specifically designed for external risk and brand-protection use cases: it highlights where attackers are impersonating your organization on the public internet, which is a core component of digital-risk and external-attack-surface management. While words such as "fake," "mimic," or "spoofing" may be used generically in security discussions, "Lookalike Domains" is the exact term and feature name Zscaler uses in the EASM product and documentation. Options A, B, and C do not correspond to a named EASM capability and therefore are not correct in the ZDTE context.

NEW QUESTION # 61

A security analyst is configuring Zscaler Data Loss Prevention (DLP) policies and wants to ensure that sensitive files are accurately identified and inspected. They ask about the methods Zscaler DLP uses to inspect files and detect potential data leaks. What are the three levels of inspection that Zscaler DLP employs to accurately identify and inspect files?

- A. Magic Bytes, MIME type, and file extension
- B. Magic Bytes, MIME type, encryption status
- C. File header, file extension, and encryption status
- D. File header, file extension, and file signature

Answer: A

Explanation:

The Data Protection section of the Zscaler Digital Transformation study guide explains that, before applying DLP dictionaries, IDM/EDM, or OCR, Zscaler must reliably determine the actual file type being inspected.

To prevent simple evasion techniques (for example, renaming an executable to .pdf), Zscaler performs a three-layer file-type inspection.

The documentation states that Zscaler first examines the file's "magic bytes" (the signature in the file header), then validates the MIME type reported by the content, and finally compares these to the file extension seen in the transaction. This layered approach ensures that if a user tampers with the extension or the declared MIME type, the underlying binary signature will still reveal the true file type, allowing the correct DLP engine and policy to be applied.

Other attributes like encryption status are indeed considered elsewhere in the DLP workflow (for example, to understand if a file can be decrypted or inspected), but the study guide is explicit that the three levels of file- type inspection are Magic Bytes, MIME type, and file extension, matching option B.

NEW QUESTION # 62

How does Zscaler apply Tenant Restriction policies to cloud applications?

- A. By blocking all external traffic
- B. By disabling cloud applications completely
- C. By allowing unrestricted access to all cloud applications
- D. By inserting headers with the appropriate information during authentication

Answer: D

Explanation:

In the ZDTE material under Advanced Access Control Services, Tenant Restrictions (often discussed with "personal vs. corporate" SaaS use) are described as a way to ensure users can only authenticate to sanctioned organization tenants for apps like Microsoft 365, Google Workspace, or other major SaaS platforms.

Zscaler does this by acting as an inline Zero Trust proxy and modifying the authentication flow, not by bluntly blocking all external SaaS access. The docs explain that, for supported SaaS applications, Zscaler injects specific identity or tenant identifiers (for example, the allowed tenant ID or corresponding claim) into the HTTP(S) requests during sign-in. These injected headers or parameters signal to the SaaS provider which tenant is permitted so that logins to personal or unsanctioned tenants can be transparently blocked or challenged while corporate tenant access is allowed.

Because this enforcement is done at the HTTP/S layer using header/parameter insertion tied to identity and policy, users retain seamless access to approved corporate tenants while attempts to use personal or shadow- IT tenants are controlled according to policy-exactly what Option C describes.

NEW QUESTION # 63

- A. Privileged Remote Access
- B. SD-WAN
- C. Cloud Connector
- D. Branch Connector

Explanation:

The study content explains that PRA enforces least-privilege access on a per-application or per-system basis, with capabilities such as time-bound access windows, credential vaulting/mapping (so credentials are never exposed), and full session recording and monitoring for audit and compliance. This directly matches the scenario of a short-term maintenance task from a contractor's own laptop.

NEW QUESTION # 64

No one lose interest during using our ZDTE actual exam and become regular customers eventually. With free demos to take reference, as well as bountiful knowledge to practice, even every page is carefully arranged by our experts, our ZDTE Exam Materials are successful with high efficiency and high quality to navigate you throughout the process. If you pay attention to using our ZDTE practice engine, thing will be solved easily.
