Since our customers aiming to Cloud-Digital-Leader study tool is from different countries in the world, and there is definitely time difference among us, we will provide considerate online after-sale service twenty four hours a day, seven days a week, please just feel free to contact with us anywhere at any time.

Google Cloud Digital Leader Sample Questions (Q40-Q45):

NEW QUESTION # 40

A customer has a tens of applications that are dependent on Oracle databases in their on-premise data centers. The customer wants to migrate to Google Cloud. Their long term goal is to move to other cloud native database technologies. What options do they have to initially move their data?

- A. Containerize Oracle and run it using Cloud Run.

- B. Migrate to a Bare Metal server.
- **C. Migrate to Cloud SQL.**
- D. Since there is no hosted Oracle solution, leave the Oracle data on-premise while doing analytics on Google Cloud.

Answer: C

Explanation:

The Bare Metal solution is the recommended approach. You can deploy Oracle capabilities like clustered databases, replication, and all performance features at licensing costs that are similar to on-premise systems

NEW QUESTION # 41

Your organization needs to ensure that the Google Cloud resources of each of your departments are segregated from one another. Each department has several environments of its own: development, testing, and production. Which strategy should your organization choose?

- A. Create a Cloud Identity domain per environment, and create a project per department in each domain.
- B. Create a project per department, and create a folder per environment in each project.
- C. Create a Cloud Identity domain per department, and create a project per environment in each domain.
- **D. Create a folder per department, and create a project per environment in each folder.**

Answer: D

Explanation:

NEW QUESTION # 42

An IoT platform is providing services to home security systems. They have more than a million customers, each with many home devices. Burglaries or child safety issues are concerns that the clients customers.

Therefore, the platform has to respond very quickly in near real time. What could be a typical data pipeline used to support this platform on Google Cloud?

- A. Cloud Pub/Sub, Cloud Dataflow, BigQuery
- B. Cloud Functions, Cloud Dataproc, Looker
- **C. Cloud Pub/Sub, Cloud Dataflow, Data Studio**
- D. Cloud Functions, Cloud Dataproc, BigQuery

Answer: C

Explanation:

=> Cloud Pub/Sub- Cloud Pub/Sub is the best to be the end-point for ingesting large amounts of data. It will grow as required, can stream data to downstream systems, and can also work with intermittently available backends.

=> Cloud Dataflow- supports streaming data and therefore is an appropriate option for processing the data that is ingested.

=> BigQuery- BigQuery also supports streaming data and its possible to do real time ana-lytics on it.

=> DataStudio- DataStudio and Looker are for visualization. They don't have any in-built analysis.

=> Cloud Functions- Cloud Functions is a useful serverless endpoint. However, Pub/Sub is better in this case because it can also retain messages for a set period if it was not possi-ble to deliver it first time.

=>Cloud Dataproc- Cloud Dataproc is used for Hadoop/Spark workloads and won't be a good fit here.

NEW QUESTION # 43

Your application is onboarding a number of users. The details of the users very widely. What kind of database would be most suitable for this use case?

- A. SQL database like MySQL or PostgreSQL
- B. OLTP database like Cloud Spanner
- C. OLAP database like BigQuery which support SQL

- **D. NoSQL database like Firestore**

Answer: D

Explanation:

Explanation:

1. NoSQL databases are best suited for this use case. Firestore is an appropriate one to use here
2. Cloud Firestore is a NoSQL document database that lets you easily store, sync, and query data for your mobile and web apps - at global scale.

NEW QUESTION # 44

You are working with a government agency. A web application serves users of the country. It allows citizens to receive certain services in providing their national identity. Citizens have complained that they are seeing delays in web page loading compared to before. On investigating, they are seeing a lot of spurious traffic coming in from a few IPs which they have identified as foreign. What should they do?

- **A. Setup Cloud Armor and add the malicious IPs to the deny list.**
- B. Setup Cloud NAT and remove all the internal IPs and replace it with a single public IP.
- C. Setup Firewall rules to allow access only to the IPs from within the country.
- D. Setup Firewall rules to deny access to the malicious IPs.

Answer: A

Explanation:

Cloud Armor provides DDoS protection for applications. It can also "Filter your incoming traffic based on IPv4 and IPv6 addresses or CIDRs. Enforce geography-based access controls to allow or deny traffic based on source geo using Google's geoIP mapping."

NEW QUESTION # 45
