Most large companies think a lot of IT professional certification. Drupal-Site-Builder Latest Exam study guide makes your test get twice the result with half the effort and little cost.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q15-Q20):

NEW QUESTION # 15

You wish to display the "Recent content" block in the sidebar region on all the article pages only. The block should be hidden on all other pages.

How do you accomplish this?

- A. Check the "show recent content" option in the site branding block, and set it to be visible only for Article Content type.
- B. Add the Recent content block to all pages, and hide it from non-Article pages using CSS.
- C. Edit Article Content type and check the "show recent content" option.
- **D. In the Block layout settings, add the Recent content block to the Sidebar section and set the block to be visible for the "Article" Content type.**

Answer: D

Explanation:

Drupal 10 and Drupal 11 provide block visibility conditions that allow administrators to control where blocks appear. According to Drupal's block system documentation, when placing a block through Structure # Block layout , you can configure visibility based on content types, pages, roles, or request paths .

To meet the requirement of showing the "Recent content" block only on Article pages, the correct approach is to place the block in the Sidebar region and configure its visibility condition to Content types # Article . This ensures the block is displayed only when viewing nodes of the Article content type and hidden elsewhere.

Option A is incorrect because using CSS to hide blocks is not a proper Drupal configuration and still renders the block unnecessarily. Options B and C are invalid because Drupal does not provide such settings in content type or site branding configurations.

Thus, using block visibility settings tied to the Article content type is the correct and recommended method in Drupal site building.

NEW QUESTION # 16

Your content team needs to use < div > tags in the content of some articles. The default configuration does not allow for this. How can you reconfigure the site to support this request? (Select 2 options)

- A. Reconfigure the site's permissions; grant content editors the "Use advanced HTML" permission.
- B. Enable the site theme's "structural HTML" setting.
- C. Reconfigure the "Basic HTML" text format to allow the use of < div > tags.
- D. Reconfigure the page's body field to use the "Full HTML" text format.

Answer: C,D

Explanation:

Drupal controls HTML markup through text formats and filters . The official User Guide explains that text formats such as Basic HTML and Full HTML determine which tags are allowed, and these formats exist specifically to protect the site from unsafe markup such as XSS. Because of that, if editors need to use < div > tags, one valid solution is to configure the content so it can use the Full HTML text format, which is the most permissive core format. Drupal also supports restricting or allowing which text formats are available on a formatted text field, including the Body field.

Another valid solution is to edit the Basic HTML text format and add < div > to the list of allowed HTML tags. Drupal's text format configuration page explicitly allows administrators to change the Allowed HTML tags for Basic HTML. That makes option C correct as well. Option B is incorrect because Drupal does not use a permission named "Use advanced HTML"; permissions are tied to specific text formats. Option D is incorrect because theme settings do not control which tags are allowed in editor input.

NEW QUESTION # 17

You have created a new Comment type, but when you try to add a comment field to a Content type, you can't select your new Comment type.

- A. Custom comment types can only be added to default Content types.
- B. "Allow comments" is not checked in the Content type settings.
- C. In your new Comment type, you didn't select "Content" as the Target entity type.
- D. You need to clear the site caches to see the new option.

Answer: C

Explanation:

In Drupal, a comment field can only use comment types that are configured for the same target entity type as the entity you are attaching comments to. When you add a comment field to a Content type (node), Drupal expects a comment type whose Target entity type is Content . If the new comment type was created with another target entity type, such as custom block or user, it will not appear as a selectable option when adding that comment field to a content type. This is consistent with Drupal core's comment architecture and field behavior.

The other choices do not match Drupal's documented behavior. "Allow comments" is not a separate prerequisite checkbox that controls whether a comment type appears; instead, comments are enabled by adding a comment field to the content type. Drupal documentation for administering comment settings confirms that comment capability is added from Manage fields by adding or reusing a comment field. There is also no documented requirement that custom comment types work only on default content types, and cache clearing is not described as the fix for this selection issue.

NEW QUESTION # 18

You are building a Drupal site for a company which has two content types, Page and Article. The layout of the content region on both the content types needs to be different. Page content type needs to have a three- column layout for the content section whereas the Article content type needs to use a two-column layout.

How will you build this functionality assuming all the core modules on the site are enabled?

- A. Add field groups named two-column and three-column in respective content types and organize fields in the field groups. Add appropriate layout styles in your theme.
- B. While defining the content types, select the two-column layout or three-column layout as appropriate while adding the fields.
- C. For each content type, enable "Use Layout Builder" in layout options on the Manage display tab and also check the "Allow each content item to have its layout customized" option.
- **D. For each content type, enable "Use Layout Builder" in layout options on the Manage display tab and select appropriate two-column / three-column layouts for the content types.**

Answer: D

Explanation:

The correct answer is D . Drupal core's Layout Builder is specifically designed to let site builders create different display layouts for different bundles, including content types such as Page and Article . The official Layout Builder documentation explains that it can be used to create layouts for content types and other entity types, and that layout defaults apply to all items of a given bundle. That matches this scenario exactly: one content type needs a default three-column layout and another needs a default two-column layout. Option B is not the best answer because the extra setting "Allow each content item to have its layout customized" enables layout overrides for individual nodes. The question asks for different layouts by content type , not per individual content item, so overrides are unnecessary. Drupal documentation states that layout overrides are optional and are only needed when each entity may differ from the bundle default.

Option A is incorrect because field grouping and theme styling are not the Drupal core mechanism for bundle- level visual page layouts. Option C is also incorrect because content types are not assigned page layouts during field creation. In Drupal core, this is handled later through Manage display with Layout Builder enabled for each content type.

NEW QUESTION # 19

The site you are managing has a "Comments approval" process. You have moderators with appropriate permissions to review and approve comments. The moderators want to see all the unapproved comments sorted by the node on which they are posted, but they can't do this on the Comments approval page.

What is the simplest way to solve this problem?

- A. Create an Export view, so the content editor can review comments in a spreadsheet.
- B. Have the content editor review comments by visiting the node instead of using the Comments page.
- C. Create a View of unapproved comments and set the sort order to "Entity ID."
- **D. Edit the Comments View, and update the table settings to make the Entity ID field sortable.**

Answer: D

Explanation:

In Drupal 10 and Drupal 11, the administrative Comments listing is provided by the core comment View. In core's default views.view.comment configuration, the comments administration display uses the table style, includes the entity_id field labeled "Posted in" , and that column is present in the table configuration.

However, core sets that column's table option to sortable: false , while other columns such as Subject, Author, and Updated are sortable. That is why moderators cannot sort the approval page by the content item the comment belongs to, even though the field is already there.

Because the existing approval page already uses a View, the simplest solution is to edit that View and enable sorting for the Entity ID / Posted in column in the table settings. Creating a brand-new View would work, but it is not the simplest option because it duplicates an existing administrative display. The other options do not address the actual issue with the current moderation screen. Drupal's content administration documentation also confirms that comments are managed from the Comments administration page, making improvement of that interface the most appropriate site-building solution.

NEW QUESTION # 20

.....

Learning knowledge is not only to increase the knowledge reserve, but also to understand how to apply it, and to carry out the

theories and principles that have been learned into the specific answer environment. Studying for attending Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 exam pays attention to the method. The good method often can bring the result with half the effort, therefore we in the examination time, and also should know some test-taking skill. The Drupal-Site-Builder Quiz guide on the basis of summarizing the past years, found that many of the questions, the answers have certain rules can be found, either subjective or objective questions, we can find in the corresponding module of similar things in common.
