

Pass Guaranteed Quiz Accurate 312-38 - EC-Council Certified Network Defender CND Actual Exam

BONUS!!! Download part of VCEPrep 312-38 dumps for free: <https://drive.google.com/open?id=1rtVIXImVjMN7fj5lzQiwHWe-WTxB4JTb>

VCEPrep can develop well until now. Our developmental force comes from those who have obtained 312-38 exam certification with using our products. Today the 312-38 exam software provided by our VCEPrep has been tested by more and more candidates, which has helped them get the 312-38 exam certification. You can download our free demo after you enter the homepage of our website. We hope that you can recognize our product. Once there is any update of 312-38 Exam software coming out after you purchased, we will immediately inform you, and make you ease to prepare for the exam.

EC-COUNCIL 312-38 or the EC-Council Certified Network Defender (CND) exam is a globally recognized certification that validates an individual's skills and knowledge in network security and defense. EC-Council Certified Network Defender CND certification is designed for network administrators, network security professionals, and other IT professionals who are responsible for securing and defending their organization's network infrastructure. The EC-COUNCIL 312-38 exam covers various topics such as network security, network defense, network infrastructure, and network security policy.

The EC-Council Certified Network Defender CND exam is a respected and sought-after certification program that equips individuals with the skills and knowledge necessary to defend networks against cyber threats. The program is designed to meet the needs of IT professionals who want to enhance their skills in network security and build a career in the field. EC-Council Certified Network Defender CND certification program provides participants with a vast array of topics and skills that are critical to securing network infrastructures and enhancing overall cybersecurity.

2026 312-38 – 100% Free Actual Exam | High-quality Useful 312-38 Dumps

For candidates who are going to pay for 312-38 test materials online, they may care more about the money safety. We apply the international recognition third party for payment, and if you pay for 312-38 exam materials, we can ensure the safety of your money and account. Besides, the third party will also protect your interests. The pass rate for 312-38 testing materials is 98.75%, and we can guarantee you that you can pass the exam just one time. We are pass guarantee and money back guarantee if you fail to pass the

exam, and the refund will be returned to your payment account.

The EC-Council 312-38 is a mandatory exam for all candidates pursuing the EC-Council Certified Network Defender (CND) certification. This is a skill-based learning path that aims to create competent network administrators who can protect, detect, and respond to rampant security threats on computer networks.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q341-Q346):

NEW QUESTION # 341

Kyle is an IT consultant working on a contract for a large energy company in Houston. Kyle was hired on to do contract work three weeks ago so the company could prepare for an external IT security audit. With suggestions from upper management, Kyle has installed a network-based IDS system. This system checks for abnormal behavior and patterns found in network traffic that appear to be dissimilar from the traffic normally recorded by the IDS. What type of detection is this network-based IDS system using?

- A. This network-based IDS system is using anomaly detection.
- B. This network-based IDS system is using dissimilarity algorithms.
- C. This network-based IDS is utilizing definition-based detection.
- D. This system is using misuse detection.

Answer: A

Explanation:

Anomaly detection in network-based Intrusion Detection Systems (IDS) involves establishing a baseline of normal behavior for the network or system and then monitoring for deviations from this baseline. The IDS analyzes traffic patterns, system performance, user behavior, and other metrics to detect anomalies that could indicate a potential security breach. This method is particularly effective for identifying new or unknown threats that do not match any known signatures or definitions. By focusing on irregular patterns rather than predefined signatures, anomaly detection can provide early warnings of malicious activities that might otherwise go unnoticed. References: The concept of anomaly detection within IDS is discussed in various cybersecurity resources, including academic publications and industry guides, which align with the ECCouncil's Network Defender (CND) objectives and documents1234.

NEW QUESTION # 342

What is the range for registered ports?

- A. 1024 through 49151
- B. 49152 through 65535
- C. Above 65535
- D. 0 through 1023

Answer: A

NEW QUESTION # 343

CORRECT TEXT

Fill in the blank with the appropriate term _____ management is an area of systems management that involves acquiring, testing, and installing multiple patches (code changes) to an administered computer system.

Answer:

Explanation:

Patch

Explanation:

Patch management is an area of systems management that involves acquiring, testing, and installing multiple patches (code changes) to an administered computer system. Patch management includes the following tasks: Maintaining current knowledge of available patches Deciding what patches are appropriate for particular systems Ensuring that patches are installed properly Testing systems after installation, and documenting all associated procedures, such as specific configurations required A number of products are available to automate patch management tasks, including RingMaster's Automated Patch Management, PatchLink Update, and Gibraltar's Everguard.

NEW QUESTION # 344

Which of the following examines Recovery Point Objectives (RPOs) and Recovery Time Objectives (RTOs) for a disaster recovery strategy?

- A. Business Impact Analysis
- B. Business Continuity Plan
- C. Risk Assessment
- D. Risk Management

Answer: A

Explanation:

Business Impact Analysis (BIA) is the process that determines the potential impacts of business function disruptions and gathers information needed to develop recovery strategies. A critical part of BIA is examining Recovery Point Objectives (RPOs) and Recovery Time Objectives (RTOs) for a disaster recovery strategy.

RPOs define the maximum age of files that must be recovered from backup storage for normal operations to resume after a disaster, while RTOs specify the maximum amount of time that a resource can remain unavailable after a disaster.

References: The role of BIA in examining RPOs and RTOs is a fundamental concept in disaster recovery and business continuity planning, which is covered in the EC-Council's Certified Network Defender (CND) curriculum. The importance of BIA in disaster recovery is also supported by industry best practices and guidelines¹².

NEW QUESTION # 345

Will is working as a Network Administrator. Management wants to maintain a backup of all the company data as soon as it starts operations. They decided to use a RAID backup storage technology for their data backup plan. To implement the RAID data backup storage, Will sets up a pair of RAID disks so that all the data written to one disk is copied automatically to the other disk as well. This maintains an additional copy of the data. Which RAID level is used here?

- A. RAID 5
- B. RAID 3
- C. RAID 1
- D. RAID 0

Answer: C

Explanation:

The RAID level used here is RAID 1, which is also known as disk mirroring. In this setup, all the data written to one disk is automatically copied to another disk, creating an exact duplicate of the data. This ensures that if one disk fails, the data is still available on the other disk, providing redundancy and protecting against data loss. RAID 1 is a common choice for systems where data availability and integrity are critical.
