Quiz 2026 NetSec-Pro: Palo Alto Networks Network Security Professional – High Pass-Rate Valid Test Review

Our NetSec-Pro exam materials are famous among candidates. Once they need to prepare an exam, our NetSec-Pro study materials are their first choice. As you know, it is troublesome to get the NetSec-Pro certificate. Now, you are fortunate enough to come across our NetSec-Pro Exam Guide. We have free demos on the website for our customers to download if you still doubt our products, and you can check whether it is the right one for you before purchase as well.

Palo Alto Networks Network Security Professional Sample Questions (Q22-Q27):

NEW QUESTION # 22

What is the recommended upgrade path from PAN-OS 9.1 to PAN-OS 11.2?

- A. 9.1 # 11.
- B. 9.1 # 11.0 # 11.2
- C. 9.1 # 10.0 # 11.
- **D. 9.1 # 10.0 # 11.2**

Answer: D

Explanation:

Palo Alto Networks requires upgrading to the next major feature release before moving to newer releases.

This ensures stability and compatibility.

"When upgrading across multiple major PAN-OS releases, you must upgrade to each intermediate major feature release. Skipping major releases is not supported." (Source: Upgrade Considerations) For PAN-OS 9.1 # 11.2, the proper path is:

9.1 # 10.0 # 11.2

NEW QUESTION # 23

A primary firewall in a high availability (HA) pair is experiencing a current failover issue with ICMP pings to a secondary device. Which metric should be reviewed for proper ICMP pings between the firewall pair?

- A. Heartbeat polling
- B. Bidirectional Forwarding Detection (BFD)
- C. Non-functional state
- D. Link monitoring

Answer: A

Explanation:

Heartbeat polling is a core HA function to monitor connectivity between HA peers, leveraging ICMP pings to determine link health and availability.

"Heartbeat Polling uses ICMP pings to verify the connectivity and health of the HA peers. If heartbeat polling fails, the firewall considers the peer to be down and may initiate failover." (Source: HA Link and Path Monitoring) If ICMP pings fail, checking heartbeat polling logs helps identify if link or path monitoring triggers the failover.

NEW QUESTION # 24

Which security profile provides real-time protection against threat actors who exploit the misconfigurations of DNS infrastructure and redirect traffic to malicious domains?

- A. URL Filtering
- B. Antivirus
- C. Vulnerability Protection
- D. Anti-spyware

Answer: D

Explanation:

The Anti-spyware profile includes DNS-based protections like sinkholing and detection of DNS queries to malicious domains, offering real-time protection against attacks that exploit DNS misconfigurations.

"The Anti-Spyware profile protects against DNS-based threats by sinkholing DNS queries to malicious domains and detecting suspicious DNS activity, thus blocking data exfiltration and C2 communication." (Source: Anti-Spyware Profiles)

NEW QUESTION # 25

Which zone is available for use in Prisma Access?

- A. Clientless VPN
- B. Intrazone
- C. Interzone
- D. DMZ

Answer: C

Explanation:

In Prisma Access, the interzone security policy rule is available and plays a crucial role in controlling traffic between zones.

"You can configure an interzone rule to control traffic that flows between different zones in Prisma Access, enabling granular security policy enforcement." (Source: Prisma Access Security Policies) This ensures comprehensive control of traffic crossing security boundaries in the cloud-delivered architecture.

NEW QUESTION # 26

How are policies evaluated in the AWS management console when creating a Security policy for a Cloud NGFW?

- A. The administrator sets a rule priority to determine the order in which they are evaluated.
- **B. They must be created in the order they are intended to be evaluated.**
- C. They can be dragged up or down the stack as they are evaluated.
- D. The administrator sets a rule order to determine the order in which they are evaluated.

Answer: B

Explanation:

Cloud NGFW Security Policies in the AWS Console are evaluated in the exact creation order- they do not have explicit rule priority fields.

"In AWS, security rules are evaluated in the order they are created. To ensure the correct evaluation logic, create them in the desired order from top to bottom." (Source: Cloud NGFW for AWS Policy Evaluation) Unlike Panorama, AWS-native management of Cloud NGFWs uses creation order as the evaluation sequence.

NEW QUESTION # 27

.....

The 21 century is the information century. Information and cyber technology represents advanced productivity, and its rapid development and wide application have given a strong impetus to economic and social development and the progress of human civilization (NetSec-Pro exam materials).
