## JN0-363 Exam Preparation & JN0-363 Real Sheets

our experts have rewritten the textbooks according to the exam outline of JN0-363, and have gathered all the key difficulties and made key notes, so that you can review them in a centralized manner. Experts also conducted authoritative interpretations of all incomprehensible knowledge points through examples and other methods. The expressions used in JN0-363 Learning Materials are very easy to understand. Even if you are an industry rookie, you can understand professional knowledge very easily. The JN0-363 training torrent will be the best study guide for you to obtain your certification.

The JN0-363 exam is a proctored exam that consists of multiple-choice questions. JN0-363 exam is administered by Pearson VUE, and candidates must register for the exam through the Pearson VUE website. JN0-363 Exam is available in multiple languages, including English, Japanese, and Chinese.

## Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q79-Q84):

### NEW QUESTION # 79

You want to see a detailed list of all established BGP sessions. In this scenario, what would be a valid command to accomplish this task?

- A. show route protocol bgp
- B. show route receive-protocol bgp <neighbor IP address>
- C. show bgp summary
- D. show bgp neighbor

**Answer: D**

Explanation:

The show bgp neighbor command in Junos OS provides a detailed description of each BGP session, including session state, options configured, and counters for messages sent and received. This is the command you would use to see a detailed list of all established BGP sessions.

Reference:

Juniper Networks documentation on BGP: BGP Commands

### NEW QUESTION # 80

Which two routing protocols make use of a designated router, or pseudo node, to represent a broadcast network? (Choose two.)

- A. MPLS
- B. IS-IS
- C. OSPF
- D. BGP

**Answer: B,C**

### NEW QUESTION # 81

Click the Exhibit.

|          | Priority | SNPA              | Router ID    |
|----------|----------|-------------------|--------------|
| Router 1 | 0        | 28:c0:da:6a:c8:f9 | 192.168.50.1 |
| Router 2 | 64       | 80:71:1f:c4:a9:ae | 192.168.50.2 |
| Router 3 | 89       | 60:85:23:1f:c5:d9 | 192.168.50.3 |
| Router 4 | 127      | 1e:ed:35:55:51:6e | 192.168.50.4 |

Referring to the exhibit, which IS-IS router will be selected as the DIS?

- A. Router 2
- B. Router 3
- C. Router 1
- D. Router 4

**Answer: D**

### NEW QUESTION # 82

Which two IS-IS packet types are used to maintain IS-IS database synchronization? (Choose two.)

- A. PSNP
- B. CSNP
- C. IIH
- D. LSP

**Answer: A,B**

### NEW QUESTION # 83

Exhibit

S Exhibit

LSI1AAS 65501

ISPB AS 65502

Advertised Prefixes: 172.20.0.0/24 172.20.20.0/24 172.20.21.0/24

\N

Advertised Prefixes: 172.20.0.0/24

172.20.1.0/24

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. Devices In AS 65512 will prefer ISP A for traffic destined to the 172.20.0.0/24 network.
- B. Devices In AS 65512 will prefer ISP B for traffic destined to the 172.20.0.0/24 network.
- C. Devices in AS 65512 will prefer ISP A for traffic destined to the 172.20.21.0/24 network.
- D. Devices in AS 65512 will prefer ISP B for traffic destined to the 172.20.21.0/24 network.

**Answer: A,C**

Explanation:

Local preference is a BGP attribute that dictates which path is preferred when multiple paths to the same destination are available. A higher local preference is preferred over a lower one. Since ISP A (AS 65501) is advertising a local preference of 100 and ISP B (AS 65502) is advertising a local preference of 200 to AS

65512, traffic from devices in AS 65512 will prefer the path via ISP B for all networks that ISP B advertises.

However, since ISP A advertises the 172.20.21.0/24 network and ISP B does not, traffic for 172.20.21.0/24 will go through ISP A. For the 172.20.0.0/24 network, which both ISPs advertise, devices in AS 65512 will prefer the path via ISP B due to the higher local preference.
