

Plat-Admn-201 Valid Test Testking, Reliable Plat-Admn-201 Exam Answers

Correct Answer: B

Explanation:

In the Salesforce Setup menu, Company Settings (formerly Company Profile) is the central location where global organizational parameters are managed. This section contains several key settings. Under Company Information, the admin can view the Org ID, default time zone, and primary currency. The Fiscal Year settings allow the admin to define whether the organization follows a standard Gregorian calendar or a custom fiscal cycle. Business Hours are used to define the working times for the organization, which is critical for calculating milestones in Service Cloud or escalation rules. If Multi-Currency is enabled, this is also where exchange rates and active currencies are managed. Viewing and configuring these settings is a foundational task for any Platform Administrator, as they establish the baseline for how data is interpreted and how time-based automation functions across the entire instance. Ensuring these are correct is vital for accurate financial reporting and maintaining service level agreements (SLAs).

Question 4. (Single Select)

A VP of sales needs to report on records owned by individuals in various parts of the role hierarchy. The organization-wide default is set to Private. What should a Platform Administrator configure to achieve this?

A: Field-Level Security
B: Sharing Rules
C: Permission Sets
D: Restriction Rules

Correct Answer: B

Explanation:

When the Organization-Wide Default (OWD) for an object is set to Private, users can only see records they own or those shared with them. While the Role Hierarchy automatically grants "upward" visibility (managers see what subordinates own), it does not naturally allow for "lateral" visibility or visibility across different branches of the hierarchy. To solve this, a Platform

Trustworthy Plat-Admn-201 Valid Test Testking | Amazing Pass Rate For Plat-Admn-201: Salesforce Certified Platform Administrator | Authorized Reliable Plat-Admn-201 Exam Answers

The aim of Salesforce Plat-Admn-201 test torrent is to help you optimize your IT technology and get the Plat-Admn-201 certification by offering the high quality and best accuracy Plat-Admn-201 study material. If you want to pass your Plat-Admn-201 Actual Exam with high score, VCE4Dumps Plat-Admn-201 latest exam cram is the best choice for you. The high hit rate of Plat-Admn-201 test practice will help you pass and give you surprise.

Salesforce Plat-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	Automation: This domain covers automation tools for streamlining business processes, including assignment and escalation rules, Flow configuration for various scenarios, and approval process setup.
Topic 2	Productivity and Collaboration: This domain addresses activity management, Chatter collaboration, Salesforce mobile app customization, and AppExchange applications including managed and unmanaged packages.
Topic 3	Configuration and Setup: This domain covers foundational administrative tasks including company settings, user interface configuration, user management with licenses and access controls, and implementing security measures through login restrictions and the Salesforce sharing model.
Topic 4	Service and Support Applications: This domain covers case management systems, including case assignment, queues, and automation through escalation rules, auto-response rules, and Einstein for Service.

Salesforce Certified Platform Administrator Sample Questions (Q121-Q126):

NEW QUESTION # 121

Users at DreamHouse Realty are only allowed to see opportunities they own. Leadership wants an enterprise-wide dashboard of all open opportunities in the pipeline so that users can see how the company is performing at any point in time. How should a Platform Administrator create the dashboard without changing any sharing settings?

- A. Create a dashboard with the running user set as someone who can see all opportunities.
- B. Update the dashboard folder settings to manager for the sales reps role.
- C. Add a filter to the dashboard to filter the opportunities by owner role.
- D. Build individual dashboards for profiles that need to see the enterprise results.

Answer: A

Explanation:

In Salesforce, dashboards can be configured to run as a specific user, known as the Running User. This user's security settings determine which data is visible to anyone viewing the dashboard. To allow users with restricted record access (due to a Private sharing model) to see company-wide totals, the Platform Administrator should set the dashboard to "Run as a specified user" who has "View All" permissions or is high enough in the role hierarchy to see all records.

This creates a "Static Dashboard." While the viewers cannot click into individual records they don't own, they can see the summarized totals and charts for the entire organization. Using a Dynamic Dashboard or filtering by role (Option B) would still respect individual sharing and hide data. Changing folder settings (Option D) only affects who can open the dashboard, not the data displayed within it.

NEW QUESTION # 122

An agent is being developed with several actions that all retrieve information from different databases. A Platform Administrator has named the actions as follows: GetCustomerInfo, GetOrderDetails, GetShippingStatus. Which best practice should the administrator follow to improve these names?

- A. Remove all verbs and use only nouns, such as CustomerInfo, OrderDetails, and ShippingStatus.
- B. Add the word "Salesforce" to the beginning of each action name to improve context for the large language model.
- **C. Use a consistent naming convention by starting each action with the verb "Get".**
- D. Use additional related verbs, such as Find, Retrieve, or Identify.

Answer: C

Explanation:

When naming actions for an AI agent, consistency is key to helping the Large Language Model (LLM) categorize and understand the available tools. Following a consistent naming convention, such as starting all retrieval actions with the verb "Get," allows the agent to more easily map user intent (e.g., "I need information about...") to the appropriate action. This reduces ambiguity during the reasoning phase of the agentic loop. Using inconsistent verbs like Find, Retrieve, or Identify (Option D) can confuse the model regarding which action is most appropriate for a given task.

Removing verbs entirely (Option A) makes it harder for the model to distinguish between an action (doing something) and a data object (a thing). Adding "Salesforce" (Option B) is generally redundant as the agent's context is already within the Salesforce environment.

NEW QUESTION # 123

The CTO of AW Computing has defined a new policy for cases to improve customer satisfaction. All cases submitted with a Case Reason of Installation must be acknowledged immediately through email and assigned to the appropriate agents. Any cases that are still in the New status after 4 hours must be escalated to support management. A Platform Administrator has implemented auto-response rules. Which additional case management tool is necessary to meet this requirement?

- A. Entitlements
- **B. Escalation Rules**
- C. Support Processes
- D. Formulas

Answer: B

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation From Salesforce Topics:

Auto-response rules handle the immediate acknowledgment email, but they do not escalate cases after a time-based condition is met. Salesforce documents describe escalation rules as the feature that automatically escalates cases when they meet rule criteria and after the defined elapsed time. In this scenario, the organization needs cases with Case Reason = Installation to be monitored and then escalated if they remain in New status after 4 hours. That is exactly the purpose of escalation rules. Salesforce also documents that case assignment rules determine how cases are routed to users or queues, while auto-response rules send the acknowledgment communication. In the platform's order of execution for service rules, assignment rules and auto-response rules are separate from escalation rules, confirming that escalation is an additional tool rather than something already covered by the existing setup. Support Processes only control status values and page behavior, formulas only calculate values, and entitlements manage service levels and milestones, not this direct timed escalation requirement.

NEW QUESTION # 124

A Platform Administrator at Universal Containers is trying to deactivate a user who has left the company but is unable to do so. What is preventing the administrator from deactivating this user?

- A. The user is part of an Account team.
- B. The user is part of an Opportunity team.
- C. The user is part of an active case assignment rule.
- **D. The user is the running user of a dashboard.**

Answer: D

Explanation:

In Salesforce, certain dependencies prevent a user record from being deactivated. One of the most common blockers is if the user is the Running User of a Dashboard. Because the dashboard relies on that user's security context to display data to others, deactivating them would break the dashboard. To resolve this, the administrator must first change the running user of the dashboard to someone else. Being part of an Opportunity Team (Option C) or Account Team (Option D) does not prevent deactivation; the user simply remains on the team but is inactive. For Assignment Rules (Option B), while you cannot delete a user in a rule, deactivation is usually permitted, though it may result in an error when the rule attempts to assign a record to the inactive user. However, the "Running User" requirement is a hard system block.

NEW QUESTION # 125

Ursa Major Solar's Platform Administrator is editing the page layout for a new custom object. A text area field is accidentally removed from the page layout, and it needs to be restored to the page layout. What are two methods for achieving this goal?

- A. Restore from the recycle bin within 15 days.
- B. Clone the layout from a different profile and use save as.
- **C. From the fields palette, drag the field into the same position.**
- **D. Restore original page layout from a sandbox.**

Answer: C,D

Explanation:

When a field is removed from a page layout, the field itself is not deleted from the database; it is simply no longer displayed to the user. To restore it, the most direct method is to use the Page Layout Editor, find the field in the Fields Palette at the top of the editor, and drag it back onto the layout (Option D). This is the standard "undo" action for layout changes. Alternatively, if the layout has undergone many complex changes and the admin wants to revert to a known good state, they could restore it from a Sandbox (Option B) by redeploying the layout metadata. Option C is incorrect because the Recycle Bin is for deleted records or fields, not for layout configurations.

Option A is a workaround that involves creating a new layout based on another, but it is not a direct way to "restore" the specific layout being edited.
