- C. The local router and neighbor 100.64.2.254are unable to establish adjacency because the TCP session could not be established.
- D. The local router and neighbor 100.64.1.254established adjacency because their BGP table versions are identical.

Answer: C

NEW QUESTION # 20
Which three common FortiGate-to-collector-agent connectivity issues can you identify using the FSSO real-time debug? (Choose three.)

- A. Mismatched pre-shared password.
- B. Incompatible collector agent software version.
- C. Inability to reach IP address of the collector agent.
- D. Log is full on the collector agent.
- E. Refused connection. Potential mismatch of TCP port.

Answer: A,C,E

Explanation:
When you enable FSSO real time debug you'll see explicit socket errors if the FortiGate can't reach the collector's IP (e.g. timeout or "no route to host"), which tells you the agent isn't reachable. If the TCP port is wrong or the listener isn't running, you'll see "Connection refused" in the debug output, pinpointing a port mismatch. And if the configured pre shared secret doesn't match, the logs show an authentication failure or "invalid key" message, clearly indicating a password mismatch. These three conditions - unreachable IP, refused connection, and bad PSK - are all directly diagnosable via the real time debug.
