If the Z-score for this rule is greater than or equal to three, what does this mean?

- A. The rate firewall connection is above the historical average value.
- B. The rate of firewall connection is above the current average value.
- C. The rate of firewall connection is optimum.
- D. The rate of firewall connection is below historical average value.

Answer: A

Explanation:
The Z-score formula in the expression builder calculates how many standard deviations the current value is from the historical average. The formula used is:

$$Z = \frac{AVG(\text{Firewall Session}) - STAT\_AVG(AVG(\text{Firewall Session}); 112)}{STAT\_STDDEV(AVG(\text{Firewall Session}); 112)}$$

AVG(Firewall Session) represents the current firewall session rate.
STAT_AVG(AVG(Firewall Session);112) represents the historical average over a 112-time unit window.
STAT_STDDEV(AVG(Firewall Session);112) represents the historical standard deviation over the same period.
A Z-score # 3 indicates that the current firewall session rate is significantly higher than the historical average (3 standard deviations above the mean), signaling an anomaly.
