## SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q28-Q33):

### NEW QUESTION # 28

How can you limit the number of columns that are displayed in a forwarding order worklist?

- A. Define a new page layout
- B. Define a new view
- C. Define a new query
- D. Apply a filter

#### Answer: A

Explanation:

In SAP S/4HANA Transportation Management, the number of columns displayed in a forwarding order worklist can be customized by defining a new page layout (B). According to the SAP documentation, the page layout in SAP Fiori or the transportation cockpit allows users to configure which columns are displayed in worklists, tailoring the interface to show only relevant information. This is done in the configuration settings for the worklist or cockpit interface.

The other options are incorrect:

- \* Define a new view (A) is not a standard term in SAP TM for worklist customization; views are more relevant in other SAP modules.
- \* Define a new query (C) is used for data retrieval but does not control column display.
- \* Apply a filter (D) reduces the data rows displayed but does not limit the number of columns.

### NEW QUESTION # 29

You want to print a road waybill document, a loading list, and labels for your freight orders with freight order type FOT1. You also want to send e-mails and XML messages to the carriers of freight orders of this type. What is the MINIMUM number of PPF action profiles that you need to define for this purpose?

- A. 0
- B. 1
- C. 2
- D. 3

#### Answer: C

### NEW QUESTION # 30

How can you create a schedule departure?

There are 2 correct answers to this question.

- A. Copy from a freight booking
- B. Maintain in default route
- C. Upload via report
- D. Generate from a rule

**Answer: C,D**

### NEW QUESTION # 31

How does the continuous move function influence the carrier selection process?

- A. It moves the dates of the freight orders to avoid idle time
- B. It narrows down the available carriers to only carriers that allow continuous moves
- C. It combines two freight orders with the same carrier in one freight order
- D. It deducts a discount from the carrier selection planning costs for neighboring freight orders

**Answer: B**

### NEW QUESTION # 32

You want to use advanced shipping and receiving. What must you define? Note: There are 2 correct answers to this question.

- A. Location with type 1200 (loading point)
- B. Location with type 1011 (vendor)
- C. Location with type 1003 (shipping point)
- D. Location with type 1001 (production plant)

**Answer: B,C**

Explanation:

Advanced shipping and receiving (ASR) in SAP S/4HANA Transportation Management integrates transportation management with warehouse management processes, requiring specific location types to be defined. According to the SAP documentation:

\* Location with type 1011 (vendor) (A) is required to represent the external supplier or vendor locations involved in the transportation process.

\* Location with type 1003 (shipping point) (B) is necessary to define the point from which goods are shipped, typically linked to a plant or warehouse.

The other options are incorrect:

\* Location with type 1200 (loading point) (C) is not a standard location type in SAP S/4HANA TM for advanced shipping and receiving; loading points are managed differently.

\* Location with type 1001 (production plant) (D) is used for manufacturing processes but is not specifically required for ASR unless it also serves as a shipping point.
