Free PDF 2026 Google ChromeOS-Administrator: The Best Professional ChromeOS Administrator Exam Free Learning Cram

Our Google ChromeOS-Administrator Online test engine is convenient and easy to learn, it supports all web browsers. If you want,

you can have offline practice. One of the most outstanding features of Professional ChromeOS Administrator Exam ChromeOS-Administrator Online test engine is it has testing history and performance review. You can have general review of what you have learnt. Besides, ChromeOS-Administrator Exam Braindumps offer you free demo to have a try before buying.

Google Professional ChromeOS Administrator Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which site isolation policy will enable site isolation for your entire organization?

- **A. SitePerProcess**
- B. IsolatePerProcess
- C. SiteOrigins
- D. IsolateOrigins

Answer: A

Explanation:

TheSitePerProcesspolicy enables site isolation for the entire organization. This means that each website opened in Chrome will run in its own dedicated process, improving security and stability by isolating potential vulnerabilities and preventing one compromised site from affecting others.

Option B (IsolateOrigins)andOption D (SiteOrigins)are not valid policy names.

Option C (IsolatePerProcess)is close but not the exact name of the policy.

NEW QUESTION # 31

One of the employees of the organization you're managing is leaving, and you want to prepare the device they've been using for adoption by a new user. What is the recommended action you need to take through the Admin console to remove any previous user data from the machine?

- A. Delete the user from the Admin console and powerwash the machine
- B. Select "Reset" on the devices overview page, and then 'Clear User Profiles.'
- C. Deprovision the device, reset it, and then finally re-enroll it
- **D. Enable forced-reenrollment on the device OU and then factory reset the device**

Answer: D

Explanation:

The best practice for preparing a ChromeOS device for a new user while keeping it managed is toenable forced-reenrollmentand thenfactory reset (Powerwash)the device. This ensures that any user-specific data is removed while the device remains enrolled and under enterprise control.

Verified Answer from Official Source:

The correct answer is verified from theChromeOS Device Reassignment Guide, which states that enabling forced-reenrollment ensures the device remains managed even after a factory reset.

"To maintain management after a user leaves, enable forced-reenrollment on the OU and then perform a factory reset (Powerwash) on the device." This approach removes all user-specific data, including files and settings, while ensuring that the device automatically re-enrolls upon reboot, maintaining management and security.

Objectives:

* Securely reassign ChromeOS devices.

* Maintain enterprise management and policies.

NEW QUESTION # 32

A large marketing company hires interns in the IT department. The interns should see only info from ChromeOS devices but should not be able to manage or update any device.

How should an admin assign this role to Interns?

How should an admin assign this role to interns?

- A. Create a custom services admin role and enable 2FA
- B. Create Custom role under Chrome management and assign Settings role

- C. Create Custom role under Chrome management and assign Manage ChromeOS devices role K.
- **D. Create Custom role under Chrome management and assign Telemetry API role**

Answer: D

Explanation:

To grant interns read-only access to ChromeOS device information without management or update capabilities, you should:

* Create Custom Role: In the Google Admin console, navigate to "Device management" -> "Chrome management" -> "User settings" -> "Roles."

* Assign Telemetry API Role: Within the custom role, assign the "Telemetry API" role. This allows interns to view device information collected through the API but not make changes.

* Exclude Other Roles: Ensure no other roles are assigned that grant management or update permissions.

Option A is incorrect because it involves service admin roles, which typically have broader administrative access.

Option C is incorrect because the "Settings" role might grant more permissions than intended.

Option D is incorrect because the "Manage ChromeOS devices" role grants full management capabilities, which is not suitable for interns.

NEW QUESTION # 33

Your leadership team would like to verify that all ChromeOS devices are restarted to apply the new update as quickly as possible. You have 2000 devices and your Admin console is configured with automatic updates enabled. What can you do to ensure the restart with the least amount of admin effort?

- A. Manually connect to each device using Chrome Remote Desktop and restart the device
- B. Ask Human Resources to create and send out a company memo asking everyone to restart their devices within 24 hours
- C. In the Admin console, in 'Device Settings', under 'AutoUpdate Settings', configure 'Device Updates' to 'Allow updates'
- **D. In 'User and Browser Settings', under 'Chrome Updates', configure 'Relaunch Notifications' to 'Force relaunch after a period' and enter a time period in hours**

Answer: D

Explanation:

To ensure that devices are restarted to apply updates efficiently, use the "Force relaunch after a period" setting within User and Browser Settings under Chrome Updates. This setting will automatically prompt users to restart their devices after the specified period.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console Update Management Guide, which recommends configuring relaunch notifications to enforce updates.

"To ensure timely application of updates, set 'Relaunch Notifications' to 'Force relaunch after a period' within User and Browser Settings." This automated method reduces manual effort and guarantees that updates are applied promptly across the fleet.

Objectives:

* Enforce device updates efficiently.

* Utilize automated relaunch policies for ChromeOS devices.

NEW QUESTION # 34

Where in the security settings should an admin configure login integration with Okta in the Admin console?

- **A. SSO with third-party IdPs**
- B. Domain-wide authentication
- C. SSO with first-party as SAML IdP
- D. Multi-Factor Authentication

Answer: A

Explanation:

To integrate ChromeOS login with Okta, a third-party identity provider, you must configure the settings under

"SSO with third-party IdPs" in the Google Admin console. Okta acts as a SAML-based identity provider, and this setting allows

ChromeOS devices to authenticate users using Okta credentials.

Verified Answer from Official Source:

The correct answer is verified from the Google Workspace Identity and Access Management Guide, which outlines how to set up SSO with third-party IdPs like Okta.

"To configure Single Sign-On (SSO) for ChromeOS devices using Okta, navigate to the Admin console > Security > Set up single sign-on (SSO) with third-party identity providers." This configuration allows seamless authentication using Okta, centralizing user login management. It also ensures that all ChromeOS devices within the organization use the same login credentials provided by Okta.

Objectives:

* Implement SSO with third-party IdPs.

* Integrate ChromeOS with Okta.

NEW QUESTION # 35

.....

PrepAwayTest provides a clear and superior solutions for each Google ChromeOS-Administrator Exam candidates. We provide you with the Google ChromeOS-Administrator exam questions and answers.
