Quiz Latest CompTIA - DS0-001 Exam Topic

our experts have rewritten the textbooks according to the exam outline of DS0-001, and have gathered all the key difficulties and made key notes, so that you can review them in a centralized manner. Experts also conducted authoritative interpretations of all incomprehensible knowledge points through examples and other methods. The expressions used in DS0-001 Learning Materials are very easy to understand. Even if you are an industry rookie, you can understand professional knowledge very easily. The DS0-001 training torrent will be the best study guide for you to obtain your certification.

CompTIA DataSys+ Certification Exam Sample Questions (Q85-Q90):

NEW QUESTION # 85

A database administrator is conducting a stress test and providing feedback to a team that is developing an application that uses the Entity Framework. Which of the following explains the approach the administrator should use when conducting the stress test?

- A. Write queries directly into the database and report findings.
- B. Check the clustered and non-clustered indexes, and report findings.
- C. Capture business logic, check the performance of codes, and report findings.
- D. Review application tables and columns, and report findings.

Answer: C

Explanation:

The approach that the administrator should use when conducting the stress test is to capture business logic, check the performance of codes, and report findings. This will help the administrator to evaluate how well the application handles high volumes of data and transactions, identify any bottlenecks or errors in the code, and provide feedback to the development team on how to improve the application's efficiency and reliability. The other options are either too narrow or too broad in scope, and do not address the specific needs of an application that uses the Entity Framework. Reference: CompTIA DataSys+ Course Outline, Domain 4.0 Data and Database Security, Objective 4.3 Given a scenario, monitor database performance and security.

NEW QUESTION # 86

A database administrator would like to create a table named XYZ. Which of the following queries should the database administrator use to create the table?

- A.
- B.
- C.
- D.

Answer: A

Explanation:

The query that the administrator should use to create the table is option B. This query uses the CREATE TABLE statement to define a new table named XYZ with three columns: ID, Name, and Age. Each column has a data type and a constraint, such as NOT NULL, PRIMARY KEY, or CHECK. The other options either have syntax errors, use incorrect keywords, or do not specify the table name or columns correctly. Reference: CompTIA DataSys+ Course Outline, Domain 1.0 Database Fundamentals, Objective 1.1 Given a scenario, identify and apply database structure types.

NEW QUESTION # 87

Which of the following are the best resources for monitoring potential server issues? (Choose two.)

- A. User connections
- B. Index usage
- C. Firewall usage
- D. CPU usage
- E. Query execution
- F. Memory usage

Answer: D,F

Explanation:

The two resources that are best for monitoring potential server issues are CPU usage and memory usage. CPU usage is the percentage of time that the processor (CPU) of the server is busy executing instructions or processes. CPU usage indicates how much workload the server can handle and how fast it can process requests. High CPU usage may affect the performance or availability of the server and cause delays or errors. Memory usage is the amount of physical memory (RAM) or virtual memory (swap space) that the server uses to store data or run applications. Memory usage indicates how much space the server has to store temporary or intermediate data or results. High memory usage may affect the performance or availability of the server and cause swapping or paging. The other options are either not relevant or not direct indicators of server health. For example, user connections are the number of users who are connected to a database server at any given time; firewall usage is the amount of data that passes through a firewall device or software; index usage is the frequency or efficiency of using indexes on tables to speed up queries; query execution is the process of running SQL statements on a database server.

NEW QUESTION # 88

A database administrator would like for users to be able to access resources remotely from home. Which of the following best describes how the administrator can enable this access without compromising the security of the stored data?

- A. Implement strong passwords policies.
- B. **Implement a virtual private network.**
- C. Implement a parameter network for internet-facing database applications.
- D. Configure and deploy a firewall.

Answer: B

NEW QUESTION # 89

A DBA left the company, and the DBA's account was removed from the system. Soon after, scheduled jobs began failing. Which of the following would have most likely prevented this issue?

- A. Business continuity plan
- B. **Service accounts**
- C. Load balancing
- D. Assigning a data steward

Answer: B

Explanation:

The most likely way to prevent this issue is to use service accounts. Service accounts are special accounts that are used by applications or services to perform tasks or run jobs on behalf of users.

Service accounts have limited permissions and access rights that are tailored to their specific functions. By using service accounts, the DBA can ensure that scheduled jobs can run independently of individual user accounts, and avoid failures due to account removal or changes.

The other options are either not related or not effective for this issue. For example, load balancing is a technique that distributes the workload across multiple servers or resources to improve performance and availability; business continuity plan is a plan that outlines how an organization will continue its operations in the event of a disaster or disruption; assigning a data steward is a process that designates a person who is responsible for ensuring the quality and governance of data.

NEW QUESTION # 90

.....

Our CompTIA DataSys+ Certification Exam exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field. Our product boost varied functions and they include the self-learning and the self-assessment functions, the timing function and the function to stimulate the exam to make you learn efficiently and easily. There are many advantages of our DS0-001 Study Tool.
