The Professional-Cloud-Developer software supports the MS operating system and can simulate the real test environment. In addition, the Professional-Cloud-Developer software has a variety of self-learning and self-assessment functions to test learning outcome, which will help you increase confidence to pass exam. The contents of the three versions are the same. Each of them neither limits the number of devices used or the number of users at the same time. You can choose according to your needs. Professional-Cloud-Developer Study Materials provide 365 days of free updates, you do not have to worry about what you missed.

The Google Professional-Cloud-Developer Exam Tests a candidate's understanding of the key concepts, technologies, and tools used in developing cloud-based applications. It covers topics such as application development and deployment, cloud storage, data processing, and security. Google Certified Professional - Cloud Developer certification exam is a combination of multiple-choice and scenario-based questions that test a candidate's ability to solve real-world problems.

Professional-Cloud-Developer Valid Exam Bootcamp - Professional-Cloud-Developer Latest Exam Cram

If you prefer to prepare your exam on paper, our Professional-Cloud-Developer training materials will be your best choice. Professional-Cloud-Developer PDF version is printable, and you can print it into hard one, and you can take them with you, and can study them anytime. In addition, Professional-Cloud-Developer exam dumps offer you free demo to try, so that you can know the mode of the complete version. If you buy Professional-Cloud-Developer Exam Dumps from us, you can get the download link and password within ten minutes. We provide you with free update for one year if you buy Professional-Cloud-Developer exam dumps.

Google Certified Professional - Cloud Developer Sample Questions (Q19-Q24):

NEW QUESTION # 19

You configured your Compute Engine instance group to scale automatically according to overall CPU usage.

However, your application's response latency increases sharply before the cluster has finished adding up instances. You want to provide a more consistent latency experience for your end users by changing the configuration of the instance group autoscaler. Which two configuration changes should you make? (Choose two.)

- A. Decrease the target CPU usage for the instance group autoscaler.
- B. Remove the health-check for individual VMs in the instance group.
- C. Add the label "AUTOSCALE" to the instance group template.
- D. Increase the target CPU usage for the instance group autoscaler.
- E. Decrease the cool-down period for instances added to the group.

Answer: C,D

Explanation:

Explanation

NEW QUESTION # 20

You recently deployed a Go application on Google Kubernetes Engine (GKE). The operations team has noticed that the application's CPU usage is high even when there is low production traffic. The operations team has asked you to optimize your application's CPU resource consumption. You want to determine which Go functions consume the largest amount of CPU. What should you do?

- A. Create a custom dashboard in Cloud Monitoring to evaluate the CPU performance metrics of your application.
- B. Connect to your GKE nodes using SSH. Run the top command on the shell to extract the CPU utilization of your application.
- C. Deploy a Fluent Bit daemonset on the GKE cluster to log data in Cloud Logging. Analyze the logs to get insights into your application code's performance.
- D. Modify your Go application to capture profiling data. Analyze the CPU metrics of your application in flame graphs in Profiler.

Answer: D

Explanation:

<https://cloud.google.com/profiler/docs/about-profiler>

Cloud Profiler is a statistical, low-overhead profiler that continuously gathers CPU usage and memory-allocation information from your production applications. It attributes that information to the source code that generated it, helping you identify the parts of your application that are consuming the most resources, and otherwise illuminating your applications performance characteristics.

<https://cloud.google.com/profiler/docs>

NEW QUESTION # 21

You recently joined a new team that has a Cloud Spanner database instance running in production. Your manager has asked you to optimize the Spanner instance to reduce cost while maintaining high reliability and availability of the database. What should you do?

- A. Use Cloud Logging to check for error logs, and reduce Spanner processing units by small increments until you find the minimum capacity required.
- B. Use Snapshot Debugger to check for application errors, and reduce Spanner processing units by small increments until you find the minimum capacity required.
- C. Use Cloud Monitoring to monitor the CPU utilization, and reduce Spanner processing units by small increments until you find the minimum capacity required.
- D. Use Cloud Trace to monitor the requests per sec of incoming requests to Spanner, and reduce Spanner processing units by small increments until you find the minimum capacity required.

Answer: C

Explanation:

https://cloud.google.com/spanner/docs/compute-capacity#increasing_and_decreasing_compute_capacity

NEW QUESTION # 22

You have an ecommerce application hosted in Google Kubernetes Engine (GKE) that receives external requests and forwards them to third-party APIs external to Google Cloud. The third-party APIs are responsible for credit card processing, shipping, and inventory management using the process shown in the diagram.

Your customers are reporting that the ecommerce application is running slowly at unpredictable times. The application doesn't report any metrics. You need to determine the cause of the inconsistent performance. What should you do?

- A. Modify your application to read and forward the x-Cloud-Trace-context header when it calls the
- B. Install the Ops Agent inside your container and configure it to gather application metrics.
- **C. Install the OpenTelemetry library for your respective language, and instrument your application.**

Answer: C

Explanation:

downstream services

D Enable Managed Service for Prometheus on the GKE cluster to gather application metrics.

NEW QUESTION # 23

Your code is running on Cloud Functions in project A.

It is supposed to write an object in a Cloud Storage bucket owned by project B.

However, the write call is failing with the error "403 Forbidden".

What should you do to correct the problem?

- A. Enable the Cloud Storage API in project B.
- B. Grant the service-PROJECTA@gcf-admin-robot.iam.gserviceaccount.com service account the roles/storage.objectCreator role for the Cloud Storage bucket.
- **C. Grant your user account the roles/iam.serviceAccountUser role for the service-PROJECTA@gcf-admin-robot.iam.gserviceaccount.com service account.**
- D. Grant your user account the roles/storage.objectCreator role for the Cloud Storage bucket.

Answer: C

NEW QUESTION # 24

.....

Because Google Professional-Cloud-Developer exam is concerning the future and the destiny of IT people, they pay more attention to the certification. When you decide to choosing IT industry, you have proved your ability. However, what we learn is not enough at all. Google Professional-Cloud-Developer Certification will be a big challenge for the candidates. If you decide to join our Exam4Free, we guarantee your success in the first attempt. If you fail, FULL REFUND!
