Pass Guaranteed Authoritative Salesforce - Mule-Dev-301 - Salesforce Certified MuleSoft Developer II Mock Test

Choosing from a wide assortment of practice materials, rather than aiming solely to make a profit from our Mule-Dev-301 latest material, we are determined to offer help. Quick purchase process, free demos and various versions and high quality Mule-Dev-301 real questions are all features of our advantageous practice materials. With passing rate up to 98 to 100 percent, you will get through the Mule-Dev-301 Practice Exam with ease. So they can help you save time and cut down additional time to focus on the Mule-Dev-301 practice exam review only. And higher chance of desirable salary and managers' recognition, as well as promotion will not be just dreams.

Salesforce Certified MuleSoft Developer II Sample Questions (Q28-Q33):

NEW QUESTION # 28

Refer to the exhibit.

What is the result of the Mule Maven Plugin configuration of the value of property `its.keystorePassword` in CloudHub 2.0?

- A. Anypoint Studio secures the value
- **B. Runtime Manager masks the value**
- C. CloudHub encrypts the value
- D. The Mule server encrypts the value

Answer: B

Explanation:

The result of the Mule Maven Plugin configuration of the value of property `itsKeystorePassword` in CloudHub 2.0 is that Runtime Manager masks the value. This means that Runtime Manager hides or obscures the value from anyone who views it in Runtime Manager or Anypoint Platform. Reference: <https://docs.mulesoft.com/runtime-manager/runtime-manager-agent-for-mule4#properties-tab>

NEW QUESTION # 29

A scatter-gather router is configured with four routes: Route A, B, C and D.
Route C false.

- A. `Payload [2]`
- B. `Error.errorMessage.payload.failures[2]`
- C. `Payload failures[2]`
- D. `Error.errorMessage.payload.results [2]`

Answer: D

Explanation:

The result of accessing route C failure is `Error.errorMessage.payload.failures[2]`. This is because a scatter-gather router returns an aggregated message that contains an array of results from each route and an array of failures from each route. The failures array contains error objects with information about each failed route execution. To access route C failure, which is the third route (index 2), the developer needs to use `Error.errorMessage.payload.failures[2]` expression. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-reference#scatter-gather-output>

NEW QUESTION # 30

Refer to the exhibit.

Based on the code snippet, `schema.json` file, and payload below, what is the outcome of the given code snippet when a request is sent with the payload?

- A. The Mule flow will throw the exception `'JSON:SCHEMA_NOT_HONOURED'`
- B. The Mule flow will execute successfully with status code 200, and the response will be the JSON sent in request
- C. The Mule flow will execute successfully with status code 204
- D. The Mule flow will execute successfully with status code 200m and a response will display the message " Age in years which must equal to or greater than zero."

Answer: A

Explanation:

Based on the code snippet, `schema.json` file, and payload below, the outcome of the given code snippet when a request is sent with the payload is that the Mule flow will throw the exception `'JSON:SCHEMA_NOT_HONOURED'`. This is because the payload does not conform to the `schema.json` file, which specifies that age must be a number greater than or equal to zero. The payload has age as a string with a negative value, which violates the schema. Therefore, the `validate-schema` operation throws an error with type `'JSON:SCHEMA_NOT_HONOURED'`. Reference: <https://docs.mulesoft.com/json-module/1.1/json-validate-schema>

NEW QUESTION # 31

An API has been developed and deployed to CloudHub Among the policies applied to this API is an allowlist of IP addresses. A developer wants to run a test in Anypoint Studio and does not want any policies applied because their workstation is not included in the allowlist.

What must the developer do in order to run this test locally without the policies applied?

- A. Deactivate the API in API Manager so the Autodiscovery element will not find the application when it runs in Studio
- B. Pass in the runtime parameter `"-Dapow.platform.gatekeeper=disabled"`
- C. Create a properties file specifically for local development and set the API instance ID to a value that is not used in API Manager
- D. Run the test as-s, with no changes because the Studio runtime will not attempt to connect to API Manager

Answer: B

Explanation:

To run a test locally without the policies applied, the developer should create a properties file specifically for local development and set the API instance ID to a value that is not used in API Manager. This way, the developer can use different configuration properties for different environments and avoid triggering API autodiscovery when running tests locally. API autodiscovery is a mechanism that associates an API implementation with its corresponding API specification and policies in API Manager based on its API instance ID. By setting this ID to a value that does not exist in API Manager, the developer can prevent API autodiscovery from finding and applying any policies to the local test. Reference: <https://docs.mulesoft.com/api-manager/2.x/api-auto-discovery-new-concept#configuring-api-autodiscovery> <https://docs.mulesoft.com/mule-runtime/4.3/configuring-properties>

NEW QUESTION # 32

A mule application exposes an API for creating payments. An Operations team wants to ensure that the Payment API is up and running at all times in production.

Which approach should be used to test that the payment API is working in production?

- A. Create a health check endpoint that reuses the same port number and HTTP Listener configuration as the API itself
- B. Monitor the Payment API directly sending real customer payment data
- C. Create a health check endpoint that listens on a separate port and uses a separate HTTP Listener configuration from the API
- D. Configure the application to send health data to an external system

Answer: C

NEW QUESTION # 33

.....

You always need actual and updated Mule-Dev-301 exam questions to prepare the test successfully in less time. If you don't study with real Salesforce Certified MuleSoft Developer II (Mule-Dev-301) questions, you will ultimately fail and waste your money and time. To save yourself from this loss, you just need to prepare with updated Salesforce Certified MuleSoft Developer II (Mule-Dev-301) exam questions of DumpsReview.
