

Plat-Dev-210 Test Certification Cost | Plat-Dev-210 Exam Test

เห็นจ้ะ!
การทดสอบระบบการสอบ O-NET Digital Testing
วันที่ 19-20 มกราคม 2569

สนามสอบใช้ URL จากใบ สกศ.2 (ใบเขียนชื่อผู้เข้าสอบ) เท่านั้น!

สกศ.2 อยู่ตรงไหน??

เว็บไซต์ สกศ. (www.niets.or.th)

1. เข้าระบบบริหารจัดการการสอบ
2. เลือกเมนู "เอกสารการสอบ"
เลือกรายการ "ใบเขียนชื่อผู้เข้าสอบ (สกศ.2/สกศ.3)"
3. ใช้นับ URL ที่อยู่ตรงนี้ "URL สำหรับใช้ในการสอบ"

เข้าใช้โดยสิทธิ์ผู้เยี่ยมชม / GUEST ACCESS เท่านั้น!!!

การเข้าใช้จากหน้าเว็บไซต์ สกศ. มีการทดสอบระบบการสอบ

ห้ามใช้ USERNAME AND PASSWORD ของผู้มีสิทธิ์สอบ เข้าทดสอบระบบ เพราะจะมีผลต่อวันสอบจริง

If you want to avoid being eliminated by machine, you must constantly improve your ability in all aspects. The emergence of Plat-Dev-210 dumps torrent provides you with a very good chance to improve yourself. On the one hand, our Plat-Dev-210 quiz torrent can help you obtain professional certificates with high quality in any industry without any difficulty. On the other hand, Plat-Dev-210 Exam Guide can give you the opportunity to become a senior manager of the company, so that you no longer engage in simple and repetitive work, and you will never face the threat of layoffs.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.

Topic 2	<ul style="list-style-type: none"> • Omniscritps: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.
Topic 3	<ul style="list-style-type: none"> • Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 4	<ul style="list-style-type: none"> • Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.

Plat-Dev-210 Exam Test - Exam Plat-Dev-210 Practice

Our Plat-Dev-210 training materials are famous at home and abroad, the main reason is because we have other companies that do not have core competitiveness, there are many complicated similar products on the market, if you want to stand out is the selling point of needs its own. Our Plat-Dev-210 test question with other product of different thing is we have the most core expert team to update our Plat-Dev-210 Study Materials, the Plat-Dev-210 practice test materials give supervision and update the progress every day, it emphasized the key selling point of the product.

Salesforce Certified Omnistudio Developer Sample Questions (Q81-Q86):

NEW QUESTION # 81

A developer is creating a Flex Card for a new Community page. The FlexCard will display case information along with action to close the case and update the case. And it will be styled using the Community's theme.

What must be developer do to configure the FlexCard for deployment in a community?

- A. Configure the Component visibility in the custom Component.
- **B. Set the Target property in publishing Options to the Community page"**
- C. Set the Developer property in Card Configuration to "Community"
- D. Add the FlexCard's API name to FlexCard Player component

Answer: B

Explanation:

The Target property in publishing Options determines where the FlexCard will be displayed. Setting it to the Community page will make the FlexCard available in the community

NEW QUESTION # 82

Why would a developer clone an Integration Procedure instead of versioning it?

- **A. The new Integration Procedure will be used independently.**
- B. The new Integration Procedure is replacing stub data.
- C. The new Integration Procedure is Chainable.
- D. The new Integration Procedure uses a Cache Block.

Answer: A

Explanation:

OmniStudio best practices dictate that versioning is used when enhancements are required within the same logical flow, while cloning is preferred when the new flow is functionally different and used separately.

* B. The new Integration Procedure will be used independently - Correct. Cloning creates an entirely new IP definition, ideal for building a similar but standalone process, rather than altering behavior for an existing process.

Incorrect Options:

* A. Using a Cache Block is unrelated to cloning vs. versioning.

* C. Replacing stub data does not require cloning; could be done in a version.

* D. Chainability does not influence whether you should clone or version.

:

Salesforce OmniStudio Guide # Cloning vs. Versioning Integration Procedures

NEW QUESTION # 83

A developer needs to use the CONTIF function to process data entered by the user in an OmniScript. The output of the function needs to be displayed to the user immediately in the current step.

Based on best practice, what element should the developer use this function in?

- A. A Range element
- B. A Set Values element
- C. A formula element
- D. A Calculation Action element

Answer: C

Explanation:

A formula element allows the developer to define formulas using functions and operators to manipulate data in an OmniScript. The output of the formula element can be displayed to the user immediately in the current step using a display element. The CONTIF function counts how many times a value appears in a list. A Calculation Action element executes a calculation procedure and returns the output as a JSON object. A Set Values element assigns values to variables or fields in an OmniScript. A Range element defines a range of values for a variable or field in an OmniScript. Based on best practice, a formula element is the most suitable element to use the CONTIF function in this scenario.

NEW QUESTION # 84

An OmniScript displays data from an API using an Integration Procedure, but some of the data is missing.

Which two configuration errors could cause this?

Choose 2 answers

- A. The JSON sent from the Integration Procedure Action does not match any of the Original Input for the Integration Procedure.
- B. The Integration Procedure Preview Input Parameters do not match the JSON sent from the OmniScript.
- C. The missing data is trimmed in the Integration Procedure Action Response JSON Path.
- D. The element name for the missing data does not match the JSON node key in the Integration Procedure Response.

Answer: C,D

Explanation:

When an OmniScript receives incomplete data from an Integration Procedure, the issue is typically in Response JSON path mapping or naming mismatches.

* A. The missing data is trimmed in the Integration Procedure Action Response JSON Path - If the Response JSON Path only points to part of the structure, any nested or unrelated values are excluded from the output.

* B. The element name for the missing data does not match the JSON node key in the Integration Procedure Response - OmniScript expects a matching node name to bind the data to UI elements. If the key doesn't match, that field will appear blank.

Incorrect Options:

* C. Preview Input Parameters are only for testing in the Integration Procedure editor; they don't affect runtime execution.

* D. Even if the JSON from the Integration Procedure Action is different from the original IP input, it would cause a failure or unexpected data, not necessarily missing specific values.

Salesforce OmniStudio # Integration Procedures # JSON Path and Data Binding

NEW QUESTION # 85

A healthcare company wants to enable its subscribers to add, edit, or delete dependents related to their policy via their Community portal. The developer on the project decides to use an OmniScript.

How should the developer configure the OmniScript to provide this functionality?

- A. Use a Text Block element and a Remote Action element.
- **B. Use an Edit Block element configured with Remote Actions.**
- C. Use an Edit Block element configured with SOQL statements.
- D. Use an Input Block element and a Data Mapper Post Action element.

Answer: B

Explanation:

In OmniStudio, the Edit Block element is purpose-built for allowing users to dynamically add, edit, or delete rows of related data, such as dependents under a policy. To save these changes, Remote Actions (typically backed by Apex or API) are used to process each record operation (Create/Update/Delete).

* A. Use an Edit Block element configured with Remote Actions - Correct. This is the recommended and most scalable way to support CRUD operations in OmniScripts for collections (e.g., dependents).

The Edit Block provides UI-level support, while Remote Actions handle back-end interaction with Salesforce or external systems.

Incorrect Options:

* B. Text Block is for display purposes and cannot manage data input or backend actions.

* C. Input Block elements do not support row-level add/edit/delete functionality as Edit Blocks do.

* D. SOQL is a read-only query language and cannot be used to update or delete records directly within an OmniScript.
