Huawei HCSA-Presales-IP Network V4.0 Sample Questions (Q10-Q15):

NEW QUESTION # 10

In the scenario where the controller and analyzer are deployed together, which of the following functions is not supported?

- A. Multi-cloud simulation
- B. MDC
- C. ERSPAN
- D. IFIT

Answer: A

Explanation:

When iMaster NCE (controller) and the analyzer are deployed on a single node (combined deployment), certain advanced functions are limited or unavailable due to resource constraints:

A: ERSPAN, C. MDC (Multi-Domain Control), and D. IFIT (In-situ Flow Information Telemetry) are still supported in basic or partial forms.

B: Multi-cloud simulation is a resource-intensive feature that requires independent, dedicated controller and simulation nodes for cloud interconnection emulation, and is not supported in combined deployments.

NEW QUESTION # 11

What are the common steps for USB-based deployment in the Huawei SD-WAN Solution? (Select all that Apply)

- A. Generate a deployment file.
- B. Import initial configuration files in batches.
- C. Perform onsite ZTP deployment.
- D. Plan sites and configure devices and the network.

Answer: A,C,D

Explanation:

In Huawei's USB-based SD-WAN deployment method, the common steps include:

D: Plan sites and configure devices and the network: This is done first in the iMaster NCE system.

B: Generate a deployment file: After planning, the system generates the configuration file.

C: Perform onsite ZTP deployment: This file is copied to a USB drive and plugged into the device for ZTP.

A: Import initial configuration files in batches is not part of USB-based deployment but applies to bulk deployment methods using the network or controller directly.

NEW QUESTION # 12

The high-quality experience assurance card on Huawei CloudEngine S8700 is the core hardware of switches in the centralized application experience upgrade solution.

- A. True
- B. False

Answer: A

Explanation:

The CloudEngine S8700 is a modular switch designed for high-performance, high-visibility campus networks.

Huawei equips this series with an "Experience Assurance Card," which enables:

Real-time traffic identification

Application-level statistics collection

In-path traffic analysis for performance bottlenecks

This hardware is central to the centralized experience assurance solution offered in the High-Quality 10 Gbps Campus Network.

NEW QUESTION # 13

What are the characteristics of Segment Routing?

- A. Its deployment is dependent on LDP and RSVP.
- B. It introduces the source routing mechanism conforming to SDN.
- C. It reduces the number of protocols and extends IGP/BGP to support label distribution without depending on LDP or RSVP.
- D. Its deployment is dependent on the controller.

Answer: B,C

Explanation:

Segment Routing (SR) introduces a source routing model where the source node defines the path that packets take through the network by imposing a list of segments (instructions).

SR is aligned with SDN principles - the network is programmable and flexible.

SR does NOT depend on LDP or RSVP. Instead, SR uses extensions to IGP (OSPF or IS-IS) or BGP to distribute segment information.

SR simplifies the control plane by reducing the number of protocols needed for label distribution.

SR can work with or without a controller - the controller enhances path computation but is not mandatory for basic SR operation.

NEW QUESTION # 14

Which of the following statements is false about Huawei's rail transportation wireless backhaul solution?

- A. The handover delay can be as low as 30 ms.
- B. Video backhaul is supported when a train is traveling at 160 km/h.
- C. The solution can be used to carry the train signal system
- D. Highly reliable active-active links are available.

Answer: C

Explanation:

Huawei's wireless backhaul solution for rail transportation supports applications such as video surveillance, train-to-ground communication, and infotainment systems. However, it is explicitly stated in Huawei documentation that this solution is not designed for or certified to carry the safety-critical train signaling systems, which typically require dedicated and highly regulated communication networks.

Options A, C, and D are true and backed by Huawei's performance claims:

Handover delay can reach as low as 30 ms using dual-link active-active design.

Video backhaul is maintained even at speeds up to 160 km/h.
