As we all know, time for preparing an exam is quite tight. Once you have signed up for the exam, you need to prepare. Therefore improving the efficiency is quite necessary. Our AWS-Developer training materials include the main knowledge point of the exam, which will help you to know the main knowledge. Besides the professionals check the AWS-Developer at time, it can ensure the accuracy of the answers. Therefore, please make it easy to use the AWS-Developer training materials freely.

The AWS-Developer Certification Exam is a challenging exam that requires a deep understanding of AWS services and technologies, as well as practical experience in developing and deploying AWS-based applications. Candidates must be able to demonstrate their ability to work with AWS SDKs and APIs, use AWS CLI and other AWS tools, and use AWS services and technologies to build, test, and deploy applications. Additionally, candidates must be able to demonstrate their ability to design and implement scalable and fault-tolerant systems, and use AWS services to monitor and optimize application performance.

The AWS-Developer certification exam is designed to validate the skills and knowledge of professionals who develop and maintain applications on the Amazon Web Services (AWS) platform. AWS Certified Developer Associate Exam (DVA-C02) certification is ideal for developers who have some experience with AWS services and want to demonstrate their ability to design, develop, and deploy scalable and reliable applications on AWS.

The AWS Certified Developer - Associate exam is a certification program offered by Amazon Web Services for developers who want to validate their skills in developing and maintaining applications on the AWS cloud platform. AWS-Developer Exam is designed to test the developer's knowledge in AWS services, programming languages, and application development.

Excellent AWS-Developer Reliable Test Tutorial - Pass AWS-Developer Exam Successful

To keep pace with the times, we believe science and technology can enhance the way people study. Especially in such a fast-paced living tempo, we attach great importance to high-efficient learning. Therefore, our AWS-Developer study materials base on the past exam papers and the current exam tendency, and design such an effective simulation function to place you in the Real AWS-Developer Exam environment. We promise to provide a high-quality simulation system with advanced AWS-Developer study materials to help you pass the exam with ease.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q323-Q328):

NEW QUESTION # 323

In Amazon EC2, which of the following is the type of monitoring data for Amazon EBS volumes that is available automatically in 5-minute periods at no charge?

- A. Detailed
- B. Primary
- C. Initial
- D. Basic

Answer: D

Explanation:

Basic is the type of monitoring data (for Amazon EBS volumes) which is available automatically in 5-minute periods at no charge called.

<http://docs.amazonaws.com/AWSEC2/latest/UserGuide/monitoring-volume-status.html>

NEW QUESTION # 324

A company is building an application for stock trading. The application needs sub-millisecond latency for processing trade requests. The company uses Amazon DynamoDB to store all the trading data that is used to process each trading request. A development team performs load testing on the application and finds that the data retrieval time is higher than expected. The development team needs a solution that reduces the data retrieval time with the least possible effort.

Which solution meets these requirements?

- A. Add local secondary indexes (LSIs) for the trading data
- B. Add retries with exponential backoff for DynamoDB queries.
- C. Store the trading data in Amazon S3, and use S3 Transfer Acceleration.
- D. Use DynamoDB Accelerator (DAX) to cache the trading data

Answer: D

NEW QUESTION # 325

A Developer has written a serverless application using multiple AWS services. The business logic is written as a Lambda function which has dependencies on third-party libraries. The Lambda function endpoints will be exposed using Amazon API Gateway. The Lambda function will write the information to Amazon DynamoDB.

The Developer is ready to deploy the application but must have the ability to rollback. How can this deployment be automated, based on these requirements?

- A. Use an AWS CloudFormation template and use CloudFormation syntax to define the Lambda function resource in the template.
- B. Deploy using Amazon Lambda API operations to create the Lambda function by providing a deployment package.
- C. Create a bash script which uses AWS CLI to package and deploy the application.
- D. Use syntax conforming to the Serverless Application Model in the AWS CloudFormation template to define the Lambda function resource.

Answer: D

Explanation:

Refer AWS documentation - SAM Gradual Code Deployment

If you use AWS SAM to create your serverless application, it comes built-in with AWS CodeDeploy to help ensure safe Lambda deployments. With just a few lines of configuration, AWS SAM does the following for you:

Deploys new versions of your Lambda function, and automatically creates aliases that point to the new version.

Gradually shifts customer traffic to the new version until you're satisfied that it's working as expected, or you roll back the update.

Defines pre-traffic and post-traffic test functions to verify that the newly deployed code is configured correctly and your application operates as expected.

Rolls back the deployment if CloudWatch alarms are triggered.

NEW QUESTION # 326

A company is using continuous integration and continuous delivery systems. A Developer now needs to automate a software package deployment to both Amazon EC2 instances and virtual servers running on-premises. Which AWS service should be used to accomplish this?

- A. AWS Elastic Beanstalk
- B. AWS CodeBuild
- C. AWS CodePipeline
- **D. AWS CodeDeploy**

Answer: D

NEW QUESTION # 327

A developer is working on an AWS Lambda function that accesses Amazon DynamoDB. The Lambda function must retrieve an item and update some of its attributes, or create the item if it does not exist. The Lambda function has access to the primary key. Which IAM permissions should the developer request for the Lambda function to achieve this functionality?

- A. dynamodb:DeleteItem
dynamodb:GetItem
dynamodb:PutItem
- **B. dynamodb:GetRecords
dynamodb:PutItem
dynamodb:updateTable**
- C. dynamodb:UpdateItem
dynamodb:GetItem
dynamodb:PutItem
- D. dynamodb:UpdateItem
dynamodb:GetItem
dynamodb:DescribeTable

Answer: B

Explanation:
