NEW QUESTION 40
What can be used to determine the type of data in storage without exposing its contents?

- A. Server logs.
- B. Collection records.
- C. Metadata.
- D. Data mapping.

Answer: A

NEW QUESTION 41
SCENARIO
Clean-Q is a company that offers house-hold and office cleaning services. The company receives requests from consumers via their website and telephone, to book cleaning services. Based on the type and size of service, Clean-Q then contracts individuals that are registered on its resource database - currently managed in-house by Clean-Q IT Support. Because of Clean-Q's business model, resources are contracted as needed instead of permanently employed.
The table below indicates some of the personal information Clean-Q requires as part of its business

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q130-Q135):

NEW QUESTION # 130
SCENARIO
Please use the following to answer the next question:
Jordan just joined a fitness-tracker start-up based in California, USA, as its first Information Privacy and Security Officer. The company is quickly growing its business but does not sell any of the fitness trackers itself. Instead, it relies on a distribution network of third-party retailers in all major countries. Despite not having any stores, the company has a 78% market share in the EU. It has a website presenting the company and products, and a member section where customers can access their information. Only the email address and physical address need to be provided as part of the registration process in order to customize the site to the user's region and country. There is also a newsletter sent every month to all members featuring fitness tips, nutrition advice, product spotlights from partner companies based on user behavior and preferences.
Jordan says the General Data Protection Regulation (GDPR) does not apply to the company. He says the company is not established in the EU, nor does it have a processor in the region. Furthermore, it does not do any "offering goods or services" in the EU since it does not do any marketing there, nor sell to consumers directly. Jordan argues that it is the customers who chose to buy the products on their own initiative and there is no "offering" from the company.
The fitness trackers incorporate advanced features such as sleep tracking, GPS tracking, heart rate monitoring.
wireless syncing, calorie-counting and step-tracking. The watch must be paired with either a smartphone or a computer in order to collect data on sleep levels, heart rates, etc. All information from the device must be sent to the company's servers in order to be processed, and then the results are sent to the smartphone or computer.
Jordan argues that there is no personal information involved since the company does not collect banking or social security information.
Based on the current features of the fitness watch, what would you recommend be implemented into each device in order to most effectively ensure privacy?

- A. Hashing.

- B. Randomized MAC address.
- C. A2DP Bluetooth profile.
- D. Persistent unique identifier.

Answer: B

Explanation:
To effectively ensure privacy, implementing a randomized MAC address in each device is recommended.
This measure helps prevent tracking and profiling of individuals based on the device's MAC address, thereby enhancing user privacy. A randomized MAC address means that the device's hardware address changes periodically, making it difficult for third parties to track the same device over time. The IAPP supports the use of such privacy-enhancing technologies to protect users' personal information from unauthorized tracking and profiling.
Reference:
IAPP Certification Textbooks, specifically sections on privacy-enhancing technologies (PETs).
"Enhancing Privacy through PETs," IAPP White Paper.

NEW QUESTION # 131
Which of the following activities would be considered the best method for an organization to achieve the privacy principle of data quality'?

- A. Build a system with user access controls and approval workflows to edit customer data
- B. Provide a customer with a copy of their data in a machine-readable format
- C. Clash customer information with information from a data broker
- D. Set a privacy notice covering the purpose for collection of a customer's data

Answer: A

Explanation:
Building a system with user access controls and approval workflows to edit customer data is considered the best method for an organization to achieve the privacy principle of data quality. This approach ensures that data is accurate, complete, and up-to-date by allowing controlled access and modifications. The IAPP's CIPT materials discuss data quality principles, emphasizing the importance of implementing robust data management practices to maintain data integrity and accuracy.

NEW QUESTION # 132
A key principle of an effective privacy policy is that it should be?

- A. Made general enough to maximize flexibility in its application.
- B. Presented with external parties as the intended audience.
- C. Written in enough detail to cover the majority of likely scenarios.
- D. Designed primarily by the organization's lawyers.

Answer: B

NEW QUESTION # 133
Which of the following most embodies the principle of Data Protection by Default?

- A. A website that has an opt-in form for marketing emails when registering to download a whitepaper.
- B. An electronic teddy bear with built-in voice recognition that only responds to its owner's voice.
- C. A messaging app for high school students that uses HTTPS to communicate with the server.
- D. An internet forum for victims of domestic violence that allows anonymous posts without registration.

Answer: A

Explanation:
Data Protection by Default is about ensuring that, by default, only necessary personal data is processed for each specific purpose and that the highest privacy settings are applied automatically. The scenario where a website uses an opt-in form for marketing emails reflects this principle because it ensures that users must actively consent to their data being used for marketing purposes, rather than having it enabled by default.

Reference:
IAPP Certification Textbooks: "Data Protection by Default" principles require that users are given control over their data and that only essential data is processed by default.

NEW QUESTION # 134
How can a hacker gain control of a smartphone to perform remote audio and video surveillance?

- A. By installing a roving bug on the phone.
- B. By manipulating geographic information systems.
- C. By performing cross-site scripting.
- D. By accessing a phone's global positioning system satellite signal.

Answer: A

NEW QUESTION # 135
