EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41
Question:
In continuous data protection, what does the amount of journal space determine?

- A. How far back the data can be recovered
- B. Amount of data that can be restored to a specific point
- C. Length of time required to recover the data
- D. Amount of space the source and replica volumes require

Answer: A

Explanation:
In continuous data protection (CDP), journal space stores all the changes made to data over time. The amount of journal space determines the retention window, i.e., how far back in time data can be recovered. A larger journal allows for a longer recovery window.
* Amount of space the source and replica volumes require:Relates to storage capacity, not recovery time.
* Length of time required to recover the data:Depends on system performance and data size.
* Amount of data that can be restored to a specific point:Depends on the changes captured in the journal.

NEW QUESTION # 42
Question:
A company needs to ensure high availability for its applications and minimize downtime in case of a disk failure. The current storage configuration is a RAID 0 array with SSDs. Which RAID level is most cost effective and would provide the necessary data protection without significant performance degradation?

- A. Implement a RAID 1 array with SSDs for disk mirroring
- B. Migrate to a RAID 5 array with SSDs for parity-based protection
- C. Upgrade to a RAID 6 array with SSDs for dual parity protection
- D. Maintain the existing RAID 0 configuration with SSDs

Answer: B

Explanation:
RAID 5provides acost-effective balancebetween:
Data protection(single parity, can tolerate one disk failure).
Performance(especially read-heavy environments).
Cost(uses fewer drives than RAID 1 or 6 for the same capacity).
* RAID 1 (B): Best for read-heavy workloads but doubles the storage needed (mirroring).
* RAID 0 (C): No protection against disk failure.
* RAID 6 (D): More protection (dual parity), but more write penalty and more disks needed.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: RAID Levels.

NEW QUESTION # 43
Question:
Which RAID level consists of two disk drives and every write is written to both disks?

- A. RAID 1
- B. RAID 6
- C. RAID 1+0
- D. RAID 5

Answer: A

Explanation:
RAID 1isdisk mirroring. It writes identical copies of data to two disks simultaneously, providing redundancy.
* Minimum of 2 disks (no parity, no striping).
* Excellent read performance, write performance equivalent to a single disk.
* Providesfault tolerancebecause data is duplicated.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: RAID Levels.

NEW QUESTION # 44
Question:
A backup array was able to achieve a 30:1 reduction by finding multiple copies of the same data. Which method was used in this scenario?

- A. Data encryption

- B. Data replication
- C. Data compression
- D. Data deduplication

Answer: D

Explanation:
Data deduplication is a technique that eliminates redundant copies of data, storing only unique instances.
When multiple copies of the same data are found, deduplication replaces them with references to a single stored copy, significantly reducing storage requirements.
* Data replication:Involves copying data to another location for redundancy, not reducing storage size.
* Data encryption:Secures data but doesn't affect storage size.
* Data compression:Reduces data size by encoding information more efficiently but doesn't eliminate duplicates.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Data Deduplication and Data Archiving Solutions Architecture.

NEW QUESTION # 45
Question:
Which operations management process is responsible for maintaining information about configuration items (CIs)?

- A. Change management
- B. Configuration management
- C. Capacity management
- D. Performance management

Answer: B

Explanation:
Configuration Management is the process that ensures all configuration items (CIs) are identified, tracked, and maintained throughout their lifecycle. It maintains a Configuration Management Database (CMDB) that records the relationships and configurations of various components in the IT environment.
