AP-209 Reliable Exam Tips | AP-209 Valid Test Sample

Salesforce certification AP-209 exam is a test of IT professional knowledge. SureTorrent is a website which can help you quickly pass Salesforce certification AP-209 exams. In order to pass Salesforce certification AP-209 exam, many people who attend Salesforce certification AP-209 exam have spent a lot of time and effort, or spend a lot of money to participate in the cram school. SureTorrent is able to let you need to spend less time, money and effort to prepare for Salesforce Certification AP-209 Exam, which will offer you a targeted training. You only need about 20 hours training to pass the exam successfully.

Salesforce Advanced Field Service Accredited Professional Sample Questions (Q42-Q47):

NEW QUESTION # 42

Which two statements are true regarding offline available inventory?

- A. Inventory items can be viewed offline but cannot be consumed offline

- B. For multi-location inventory, the app primes multiple locations and related items, but there are limits to be aware of
- C. Multi-location inventory is not supported in the mobile app
- D. Only the most recently created Inventory items created are primed
- E. The user's inventory is primed

Answer: B,E

Explanation:

Offline capabilities are a critical feature of the Field Service mobile app.

* Option E is correct: The fundamental behavior of the app is to "Prime" (download for offline use) the inventory associated with the Service Resource. This ensures that when a technician is in a basement with no signal, they can still view their van stock and consume parts (create Product Consumed records).

* Option B is correct: Salesforce Field Service supports Multi-Location Inventory (e.g., a technician has a Van location and a Garage location). The app is capable of priming these additional locations so the tech can transfer stock between them. However, consultants must be aware of data volume limits (priming thousands of parts can slow down sync times), so configuration settings restrict how far back or how many items are synced.

* Option D is incorrect because the app specifically allows for the consumption of parts while offline; the transactions sync back to the server once connectivity is restored.

NEW QUESTION # 43

Universal Containers services customers in the public sector. When technicians are needed for repair jobs in government buildings, it is crucial that only technicians with the relevant security badge are selected for the job.

Which two configuration options can a consultant recommend to achieve the business requirement?

- A. Create an Apex Trigger that deletes 'Assigned Resources' that are not defined as 'Required Resources' for the Account
- B. Use time-phased skills in order to ensure that only resources with security badges can perform the job
- C. Create 'Resource Preferences' of Type 'Required' for Accounts that require specific Service Resources
- D. Include the 'Match Boolean' Work Rule in the relevant Scheduling Policies
- E. Include the 'Extended Match' Work Rule in the relevant Scheduling Policies

Answer: D,E

Explanation:

To filter resources based on strict criteria (like security clearance), you use Work Rules (Hard Constraints).

* Option B is correct (Match Boolean): This is a simple, effective method for binary requirements. You place a checkbox on the Service Appointment (e.g., "Requires Security Badge") and a corresponding checkbox on the Service Resource (e.g., "Has Security Badge"). The Match Boolean Work Rule enforces that if the Appointment is checked, the Resource must also be checked.

* Option E is correct (Extended Match): If the requirement is more complex (e.g., matching a specific type or level of badge), the Extended Match Work Rule is best. It allows you to match a field on the Service Appointment (or Work Order) to a related list or field on the Service Resource. For example, matching the "Badge Type" required by the Government Account to the "Badge Type" held by the Resource.

* Note: While Skills (Option C) are also commonly used for this, the question specifically points toward Work Rule configurations (Boolean/Extended) often used for strict compliance attributes.

NEW QUESTION # 44

Which consideration should a consultant take when advising a customer on their Field Service Mobile App strategy, in a case where the Service Resources are named contractors who provide their own mobile devices?

- A. Set all records to private to ensure customer data confidentiality
- B. Field Service Mobile App is optimized for a handful of Android and iOS devices. Refer to 'Salesforce Help and Training' for the latest update
- C. Contractor licenses do not include access to the Field Service Mobile App
- D. Since all Service Resources are named contractors, 'Collect Service Resource Geolocation History' should be disabled

Answer: B

Explanation:

When dealing with a Bring Your Own Device (BYOD) strategy (common with contractors), device compatibility is the biggest technical hurdle.

- * Option B is correct. Salesforce explicitly publishes a list of supported devices and operating systems (iOS and Android versions) 6. Since the company does not own the phones, they cannot guarantee every contractor has a compatible device. The consultant must warn the client to check these specs against their contractors' hardware.
- * Option A is a policy decision, not a technical constraint. You can track contractor location if they agree to it.
- * Option C is false; Contractor licenses (Community Plus) do include access to the Field Service Mobile App.

NEW QUESTION # 45

An admin notices that an org currently has a large number of qualified candidates per Service Appointment. How can the admin reduce the number of candidates per appointment in order to improve optimization quality?

- A. The admin should use database Service Objectives such as 'Minimize Travel', 'Resource Priority' and 'Resource Preferences'
- B. The admin should move some of the resources to a different Service Territory with fewer resources; alternatively, create a new Service Territory and assign it resources
- C. The admin should log a support case, as the system should be able to handle this amount of qualified candidates
- **D. The admin should reduce the number of available candidates for each appointment by adding additional Work Rules, starting with the 'Match Territory', 'Working Territories', 'Maximum Travel From Home' and 'Extended Match' Work Rules in case they are not already applied**

Answer: D

Explanation:

In Salesforce Field Service, the scheduling engine creates a list of "Qualified Candidates" based on Work Rules (Hard Constraints). If a search returns too many candidates, it places a heavy load on the CPU and can degrade optimization performance.

* Option D is correct because Work Rules are the mechanism used to filter candidates. Adding rules like Match Territory (ensuring the resource belongs to the territory), Maximum Travel from Home (filtering out distant resources), or Extended Match (matching custom criteria) effectively reduces the pool of eligible technicians before the system attempts to score them. This improves the speed and quality of the schedule.

* Option A is incorrect because Service Objectives are "Soft Constraints." They rank candidates (giving them a score of 0-100) but do not remove them from the list.

* Option B is a manual structural change that doesn't address the configuration issue.

* Option C is incorrect because optimization performance is directly controlled by the efficiency of the configuration (Scheduling Policy).

NEW QUESTION # 46

What is the best practice to upload a photo that is taken by the mobile worker to a Work Order? (Choose 2 options)

- A. Edit the Work Order record through the SFS Mobile App and add the photo as an attachment
- **B. Leverage the Field Service Mobile flow and add image upload component**
- **C. Use a quick action of type 'Upload Photo'**
- D. Use a quick action of type 'Attach File'
- E. Post the photo via the 'Feed' tab

Answer: B,C

Explanation:

Salesforce Field Service provides specific tools for capturing rich media in a structured way.

* Option B is correct (Mobile Flow): This is the modern best practice. By using a Flow with the File Upload (or Image) screen component, you can guide the technician to take a photo at a specific step in the process (e.g., "Take a photo of the completed installation"). This ensures consistency.

* Option A is correct (Quick Action): You can configure Quick Actions (specifically Global or Object-Specific actions for File Uploads) in the Field Service Mobile app extension settings. This provides a one-tap button for technicians to launch the camera and attach a file directly to the record.

* Note: While Option D (Chatter Feed) is possible, it is unstructured data. Options A and B are the "Best Practice" recommendations for process adherence.
