## Free PDF Quiz Salesforce - High Hit-Rate Plat-Admn-301 - Salesforce Certified Platform Administrator II Latest Test Practice

Our Plat-Admn-301 learning materials will aim at helping every people fight for the Plat-Admn-301 certificate and help develop new skills. If we want to survive in this competitive world, we need a comprehensive development plan to adapt to the requirement of modern enterprises. We sincerely recommend our Plat-Admn-301 Preparation exam for our years' dedication and quality assurance will give you a helping hand. You can just free download the free demo of our Plat-Admn-301 study materials to know how excellent our Plat-Admn-301 exam questions are.

## Salesforce Certified Platform Administrator II Sample Questions (Q88-Q93):

NEW QUESTION # 88

Which two tools should an administrator use to required data to be entered in a field and improve data quality on a record in Salesforce?

Choose 2 answers

- A. Dashboards
- **B. validation Rules**
- C. Workflow Rules
- **D. Page Layouts**

**Answer: B,D**

Explanation:

Validation rules and page layouts are two tools that can be used to require data to be entered in a field and improve data quality on a record in Salesforce. Validation rules are a way to enforce data quality and integrity by checking the values of fields before a record is saved and displaying an error message if the values do not meet the specified criteria. Page layouts are a way to control the layout and organization of fields, buttons, related lists, and other components on a record page. Page layouts can also make fields required so that users must enter a value before saving a record.

### NEW QUESTION # 89

The administrator at Cloud Kicks needs to set up automation to update three fields on the Shipment custom object. Because of the effect these updates will have on some programmatic customizations, they need to happen in a very specific order.

How should the administrator configure the field updates to ensure the proper order.

- A. Create a workflow rule with three field updates entered in the correct order.
- B. Create a process with three criteria nodes and stop after each action.
- **C. Create a process with one criteria node and three field updates in the correct order.**
- D. Create three workflow rules in order, one workflow rule for each field update.

**Answer: C**

Explanation:

To ensure that multiple field updates occur in a specific order on a custom object, the administrator should create a process with one criteria node and three field updates arranged in the correct order. This approach allows the updates to execute sequentially within a single automation framework, ensuring that they happen in the intended order.

\* Using Process Builder with a Single Criteria Node:

\* In Process Builder, the administrator can define a single criteria node that triggers the field updates. By adding multiple field updates within this single node and arranging them in the desired sequence, Salesforce will execute them in that specific order.

\* This setup provides better control over the sequence of updates compared to multiple workflow rules, as Process Builder will execute each field update step by step as configured within the node.

\* Advantages Over Workflow Rules:

\* Unlike workflow rules, where the order of execution can be less predictable due to separate triggers, Process Builder enables precise control over the execution sequence within the same process.

\* Using multiple workflow rules or multiple criteria nodes with stop actions would complicate the setup without guaranteeing the specific order. Process Builder's structure ensures that updates proceed in the exact order defined.

Incorrect options:

\* Option A (Three workflow rules): Creating separate workflow rules for each update does not ensure a specific order of execution, as workflow rules are not guaranteed to run sequentially.

\* Option C (Three criteria nodes with stop actions): This approach would execute each node separately, and the stop action after each node adds unnecessary complexity, without ensuring the sequential order required.

\* Option D (One workflow rule with three field updates): Workflow rules do not guarantee the order of field updates within a single rule. Using Process Builder with a single node is more reliable for sequential execution.

In conclusion, Process Builder with one criteria node and ordered field updates is the most effective approach to ensure a specific execution sequence for multiple field updates on the Shipment object.

Reference: According to Salesforce best practices, Process Builder is recommended over multiple workflow rules when specific ordering and complex logic are required for field updates

### NEW QUESTION # 90

DreamHouse Realty wants to notify an assigned agent when an appointment is booked on a custom object for one of their listed homes along with the total number of appointments booked so far. The administrator has configured a Roll-up Summary for the

number of appointments as well as a flow to detect the creation of a new appointment and send the information to the agent. What consideration about process automation should the administrator be aware of to ensure the right information is delivered?

- A. Only standard objects can be used with Roll-up Summary fields.
- B. Roll-up Summary calculations will prevent a Flow from being triggered.
- C. Rows can only be triggered from the records created on standard objects.
- **D. Roll-up Summary calculations run after processes and workflows.**

**Answer: D**

Explanation:

Roll-up Summary calculations are performed after processes and workflows are executed, which means that any changes made by processes or workflows will not be reflected in the roll-up summary field until after the transaction is committed. This could cause inaccurate or outdated information to be delivered to the agent if the flow relies on the roll-up summary field value.

#### NEW QUESTION # 91

An administrator needs a business process automated, but only for certain users and profiles. The administrator will need to frequently update which users and profiles will use the process. After evaluating the declarative options, it was determined that this functionality must be done via an Apex trigger.

What software requirement should the administrator request so that process execution can be declaratively controlled?

- A. Use Process Automation Setting in Setup to the appropriate users or profiles.
- B. Use Apex Class Access to assign the Apex code to the user or profile.
- **C. Use a custom permission set that is assigned to the user.**
- D. Use a System permission that is assigned to the user or profile.

**Answer: C**

Explanation:

Use a custom permission set that is assigned to the user because custom permissions are a way to grant access to custom processes or functionality based on user profiles or permission sets. Custom permissions can be referenced by Apex code, validation rules, flows, or other logic to control whether a process should run for a user or not. Custom permissions can be used to declaratively control process execution by assigning them to users or profiles.

#### NEW QUESTION # 92

The sales team at Cloud Kicks is noticing that sales reps are misusing the new Screen Flow tool for data entry, since they are viewed the initial screen after clicking finish.

What should the administrator do to fix this?

- **A. Update the flow with a local redirect action.**
- B. Add a trigger to redirect the user to a new page.
- C. Use a lightning action to redirect the user
- D. Create a new flow to redirect the user when the other flow finishes.

**Answer: A**

Explanation:

A lightning action is a type of quick action that can invoke a Lightning component, a Visualforce page, or a URL. The administrator can use a lightning action to redirect the user to a different page after they finish the screen flow. This way, the user will not see the initial screen again and will not misuse the flow tool.
