Valid Test 300-425 Tutorial | Test 300-425 Result

Our 300-425 study materials have a high quality which is mainly reflected in the pass rate. Our product can promise a higher pass rate than other study materials. 99% people who have used our 300-425 study materials passed their exam and got their certificate successfully, it is no doubt that it means our 300-425 Study Materials have a 99% pass rate. So our product will be a very good choice for you. If you are anxious about whether you can pass your exam and get the certificate, we think you need to buy our 300-425 study materials as your study tool, our product will lend you a good helping hand.

Cisco 300-425 exam is a certification exam aimed at network designers and engineers looking to validate their skills in designing Cisco Enterprise Wireless Networks. 300-425 exam is designed to test candidates' ability to plan, design, implement, operate and troubleshoot complex enterprise wireless networks. 300-425 Exam is an important certification for professionals who aim to design and implement wireless networks for large enterprises.

Cisco Designing Cisco Enterprise Wireless Networks Sample Questions (Q210-Q215):

NEW QUESTION # 210

A network engineer is deploying Cisco 91301 APs on multiple Cisco Catalyst 9800-80 WLCs with Cisco Catalyst Center (formerly DNA Center). The engineer must enable Cisco AI Analytics and location analytics to use the RRM features to automatically manage the WLC RF profiles. Which type of license must be used on Cisco Catalyst Center?

- A. Catalyst Advantage
- B. SNTC SmartNet
- C. Right-To-Use
- D. Catalyst Essentials

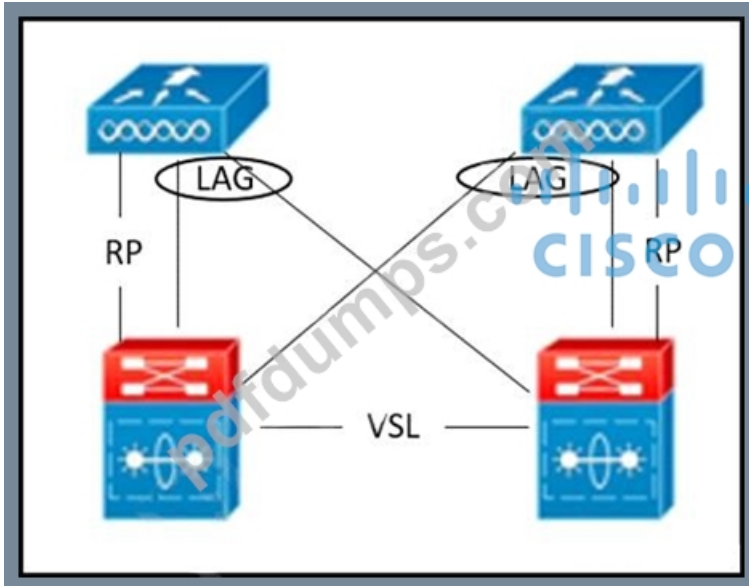

Answer: A

Explanation:

Cisco Catalyst Center requires the Catalyst Advantage license to enable Cisco AI Analytics and location analytics. This license tier provides access to advanced assurance, AI-driven insights, and RRM automation capabilities needed to automatically manage RF profiles across Catalyst 9800 WLCs.

NEW QUESTION # 211

Refer to the exhibit.

A WLC SSO pair is set up. Which failure scenario causes a split-brain scenario?

- A. RP is down.
- **B. VSL is down.**
- C. Two distribution ports on the active WLC are down.
- D. One distribution port on the active WLC is down.

Answer: B

NEW QUESTION # 212

A wireless engineer is hired to design a network for a technology company. The company campus has four buildings and a warehouse with access points that provide full wireless coverage as well as a pair of WLCs located in the core of the network. Which type of wireless architecture is being used?

- A. autonomous deployment
- B. unified deployment
- **C. centralized deployment**
- D. distributed deployment

Answer: C

Explanation:

NEW QUESTION # 213

An engineer has designed an anchor redundancy for guest clients connecting to SSID with auto-anchor configured. After adding a second Anchor WLC under the SSID mobility anchor list, clients are load-balanced between existing and new anchors instead of having one anchor as active and the other one as standby. Which feature should be included in the design that will be configured on the WLC running

8.1 or above to ensure anchor redundancy?

- A. AP groups
- B. Auto-Anchor Foreign Mapping
- C. 802.11r
- D. Guest Anchor Priority

Answer: D

Explanation:

When designing anchor redundancy for guest clients with auto-anchor configured on a WLC running version

8.1 or above, setting up Guest Anchor Priority ensures that one anchor is treated as active while another acts as standby rather than load-balancing clients between anchors which is not desired in this case. NEW QUESTION # 214

A network engineer is working on a design for a wireless network that must support data, voice, and location services. To support these services, which access point placement must the engineer use?

- A. perimeter and corner
- B. perimeter only
- C. corner only
- D. indoor and outdoor

Answer: A

Explanation:

In a location-ready design, it is important to ensure that access points are not solely clustered in the interior and toward the center of floors. Rather, perimeter access points should complement access points located within floor interior areas. In addition, access points should be placed in each of the four corners of the floor, and at any other corners that are encountered along the floor perimeter. These perimeter access points play a vital role in ensuring good location fidelity within the areas they encircle, and in some cases may participate in the provisioning of general voice or data coverage as well.

NEW QUESTION # 215
