Microsoft Cybersecurity Architect Sample Questions (Q140-Q145):

NEW QUESTION # 140

Your company has a hybrid cloud infrastructure.

Data and applications are moved regularly between cloud environments.

The company's on-premises network is managed as shown in the following exhibit.

You are designing security operations to support the hybrid cloud infrastructure. The solution must meet the following requirements:

- Govern virtual machines and servers across multiple environments.
- Enforce standards for all the resources across all the environments

by using Azure Policy.

Which two components should you recommend for the on-premises network? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Azure Bastion
- B. guest configuration in Azure Policy
- C. on-premises data gateway
- D. Azure Arc
- E. Azure VPN Gateway

Answer: B,D

Explanation:

B: Azure Policy's guest configuration feature provides native capability to audit or configure operating system settings as code, both for machines running in Azure and hybrid Arc-enabled machines. The feature can be used directly per-machine, or at-scale orchestrated by Azure Policy.

Configuration resources in Azure are designed as an extension resource. You can imagine each configuration as an additional set of properties for the machine.

E: Azure Arc is a bridge that extends the Azure platform to help you build applications and services with the flexibility to run across datacenters, at the edge, and in multicloud environments.

Microsoft recently [2019/2020] released Azure Arc, which unlocks new hybrid scenarios for organizations by bringing new Azure services and management features to any infrastructure.
