Another great way to assess readiness is the Amazon CLF-C02 web-based practice test. This is one of the trusted online Amazon CLF-C02 prep materials to strengthen your concepts. All specs of the desktop software are present in the web-based Amazon CLF-C02 Practice Exam.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q215-Q220):

NEW QUESTION # 215

According to the AWS shared responsibility model, who is responsible for the virtualization layer down to the physical security of the facilities in which AWS services operate?

- A. It is a shared responsibility between AWS and the customer.
- B. The customer's AWS Support plan tier determines who manages the configuration.
- C. It is the sole responsibility of AWS.
- D. It is the sole responsibility of the customer.

Answer: C

Explanation:

According to the AWS shared responsibility model, AWS is responsible for the security of the cloud, which includes the virtualization layer down to the physical security of the facilities in which AWS services operate¹. The customer is responsible for the security in the cloud, which includes the configuration and management of the AWS resources and applications that they use¹.

NEW QUESTION # 216

Which AWS service or tool provides recommendations to help users get rightsized Amazon EC2 instances based on historical workload usage data?

- A. AWS Pricing Calculator
- B. AWS Systems Manager
- C. AWS App Runner
- D. AWS Compute Optimizer

Answer: D

Explanation:

AWS Compute Optimizer is the AWS service or tool that provides recommendations to help users get rightsized Amazon EC2 instances based on historical workload usage data. AWS Compute Optimizer analyzes the configuration and performance characteristics of the EC2 instances and delivers recommendations for optimal instance types, sizes, and configurations. AWS Compute Optimizer helps users improve performance, reduce costs, and eliminate underutilized resources

NEW QUESTION # 217

Which tool should a developer use to integrate AWS service features directly into an application?

- A. AWS Batch
- B. AWS Lambda

- C. AWS CodeDeploy
- **D. AWS Software Development Kit**

Answer: D

Explanation:

AWS Software Development Kit (SDK) is a set of platform-specific tools for developers that let them integrate AWS service features directly into their applications. AWS SDKs provide libraries, code samples, documentation, and other resources to help developers write code that interacts with AWS APIs. AWS SDKs support various programming languages, such as Java, Python, Ruby, .NET, Node.js, Go, and more. AWS SDKs make it easier for developers to access AWS services, such as Amazon S3, Amazon EC2, Amazon DynamoDB, AWS Lambda, and more, from their applications. AWS SDKs also handle tasks such as authentication, error handling, retries, and data serialization, so developers can focus on their application logic.

NEW QUESTION # 218

Which AWS service can generate information that can be used by external auditors?

- A. Amazon Inspector
- B. Amazon Cognito
- C. Amazon FSx
- **D. AWS Config**

Answer: D

Explanation:

AWS Config enables users to assess, audit, and evaluate the configurations of AWS resources. It provides information that can be used by external auditors to ensure compliance with various regulatory requirements by tracking changes and maintaining configuration history. Amazon Cognito, FSx, and Inspector do not provide detailed configuration tracking for audit purposes.

NEW QUESTION # 219

A company is using AWS Lambda functions to build an application.

Which tasks are the company's responsibility, according to the AWS shared responsibility model? (Select TWO.)

- **A. Establish the IAM permissions that define who can run the Lambda functions.**
- B. Deploy Amazon EC2 instances to support the Lambda functions.
- C. Patch the servers where the Lambda functions are deployed.
- D. Scale out the Lambda functions when the load increases.
- **E. Write the code for the Lambda functions to define the application logic.**

Answer: A,E

Explanation:

According to the AWS shared responsibility model, AWS is responsible for the security of the cloud, while the user is responsible for the security in the cloud. This means that AWS manages the security and maintenance of the underlying infrastructure, such as the servers, networks, and operating systems, while the user manages the security and configuration of the resources and applications that run on AWS. For AWS Lambda functions, the tasks that are the user's responsibility are:

Establish the IAM permissions that define who can run the Lambda functions. IAM is a service that enables users to manage access and permissions for AWS resources and users. Users can create IAM policies, roles, and users to grant or deny permissions to run Lambda functions, invoke other AWS services, or access AWS resources from Lambda functions. [AWS Lambda Permissions] AWS Certified Cloud Practitioner - aws.amazon.com Write the code for the Lambda functions to define the application logic.

Lambda functions are units of code that can be written in any supported programming language, such as Python, Node.js, Java, or Go. Users can write the code for the Lambda functions using the AWS Management Console, the AWS Command Line Interface (AWS CLI), the AWS SDKs, or any code editor of their choice. Users can also use AWS Lambda Layers to share and manage common code and dependencies across multiple functions. [AWS Lambda Overview] AWS Certified Cloud Practitioner - aws.amazon.com
