QUESTION 1

Which Python snippet receives a Meraki webhook request?

- ☐ A

```
@app.route('/mynet/webhook', methods=['PUT'])
@app.accept_body(WebhookSchema)
def receive_webhook(**kwargs):
    send_sms_alert(kwargs['alertType'])
```
- ☐ B

```
@app.route('/mynet/webhook', methods=['GET'])
@app.accept_body(WebhookSchema)
def receive_webhook(**kwargs):
    send_sms_alert(kwargs['alertType'])
```
- ☐ C

```
@app.route('/mynet/webhook', methods=['PATCH'])
@app.accept_body(WebhookSchema)
def receive_webhook(**kwargs):
    send_sms_alert(kwargs['alertType'])
```
- ☒ D

```
@app.route('/mynet/webhook', methods=['POST'])
@app.accept_body(WebhookSchema)
def receive_webhook(**kwargs):
    send_sms_alert(kwargs['alertType'])
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: D

Popular Cisco 300-435 Exams - Training 300-435 Tools

Pass4Test is a professional website. It focuses on the most advanced Cisco 300-435 for the majority of candidates. With Pass4Test, you no longer need to worry about the Cisco 300-435 exam. Pass4Test exam questions have good quality and good service. As long as you choose Pass4Test, Pass4Test will be able to help you pass the exam, and allow you to achieve a high level of efficiency in a short time.

Cisco 300-435 Exam is a highly sought-after certification in the networking industry. It validates your expertise in automating and programming Cisco enterprise solutions and opens up new career opportunities for you. Automating and Programming Cisco Enterprise Solutions certification also demonstrates your proficiency in developing and deploying network automation solutions using various tools and technologies.

Cisco Automating and Programming Cisco Enterprise Solutions Sample Questions (Q95-Q100):

NEW QUESTION # 95

Refer to the exhibit.

The configuration commands are entered in CLI config mode to configure a static telemetry subscription on a Cisco IOS XE device. The commands are accepted by the device, but the consumer receives no telemetry data. Which change must be made to ensure that the consumer receives the telemetry data?

- A. The IP address of the receiver must be set.
- B. The stream type must be set to YANG.
- C. The sender IP address must be set.
- D. The update policy period must be shortened.

Answer: A

Explanation:

https://www.cisco.com/c/en/us/td/docs/iosxml/ios/prog/configuration/1610/b_1610_programmability_cg/model_driven_telemetry.html

NEW QUESTION # 96

Drag and drop the code from the bottom onto the box where the code is missing in the Ansible playbook to apply the configuration to an interface on a Cisco IOS XE device. Not all options are used.

Answer:

Explanation:

NEW QUESTION # 97

Refer to the exhibit. A Python script is used to configure a Cisco IOS XE router. The Loopback2 interface currently has a description of Management and an IP address/netmask of 10.222.34.22/32.

What is the result of executing the script?

- A. The router rejects all commands, and the configuration remains the same.
- B. The interface is removed from the configuration.
- C. The interface description is removed from the configuration.
- D. The interface description remains the same.

Answer: C

NEW QUESTION # 98

When the Cisco DNA center intent API is used as part of an automation process what prompts receiving a HTTP 206 status code on a call?

- A. The client authentication credentials that are included with the request are missing or invalid.
- B. The client request was successful, but there is no content associated with the request.
- **C. The client made a request for partial content matching a range header.**
- D. The client made a request that has been received but not yet acted upon.

Answer: C

Explanation:

A HTTP 206 status code is returned when the server successfully processes a partial GET request specified by the range header in the client's request. This is commonly used in situations where large files are being transferred, and the client needs to download or stream only a portion of the file. References := (Automating Cisco Enterprise Solutions Official Cert Guide)

NEW QUESTION # 99

Fill in the blank to complete the URL for an API call to Cisco SD-WAN to display the history of the Bidirectional Forwarding Detection sessions that run on a vEdge router.

Answer:

Explanation:

bfd/history?

Explanation:

To construct this URL, one needs to understand REST API call structure and how it relates to Cisco SD-WAN vManage APIs specifically. The base URL starts with 'https://', followed by 'vmanage-ip-address' which should be replaced with the actual IP address or hostname of vManage. '/dataservice/' is a common prefix in all vManage REST API calls indicating that data service is being accessed. Following this,

'/device/bfd/sessions/history' specifies that we are interested in accessing historical data about Bidirectional Forwarding Detection sessions on devices. Finally, '?deviceId=' is a query parameter where one must provide an actual device ID instead of '<deviceId>' placeholder. References: (Automating Cisco Enterprise Solutions Official Cert Guide)

<https://vmanage-ip-address/dataservice/device/bfd/synced/sessions?deviceId=deviceId>
