

Reliable Oracle 1z0-076 Braindumps & 1z0-076 Reliable Torrent

**Oracle 1Z0-076
Exam Prep
Made Easy:
The Benefits
of Using
Practice Tests**

P.S. Free & New 1z0-076 dumps are available on Google Drive shared by Pass4cram: https://drive.google.com/open?id=15R_CQ9WUyH8wXTkoCoIMFvXO88NzaI7h

After clients pay for our 1z0-076 exam torrent successfully, they will receive the mails sent by our system in 5-10 minutes. Then the client can click the links and download and then you can use our 1z0-076 questions torrent to learn. Because time is very important for the people who prepare for the exam, the client can download immediately after paying is the great advantage of our 1z0-076 Guide Torrent. So it is very convenient for the client to use.

The most distinguished feature of Pass4cram's study guides is that they provide you the most workable solution to grasp the core information of the certification syllabus in an easy to learn set of 1z0-076 study questions. Far more superior in quality than any online courses free, the questions and answers contain information drawn from the best available sources. They are relevant to the 1z0-076 Exam standards and are made on the format of the actual 1z0-076 exam.

Get Real Oracle 1z0-076 Questions From Pass4cram & Ace Your Exam

There is a ton of Oracle Database 19c: Data Guard Administration (1z0-076) prep material available on the internet. But the main thing to notice is their validity and reliability. Many applicants remain unsuccessful in locating the right Oracle Database 19c: Data Guard Administration (1z0-076) practice test and lose their time and money.

Oracle Database 19c: Data Guard Administration Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which three can be done using Data Guard Broker?

- A. Configuring the standby control file, server parameter file, and data files for a standby database.
- **B. Automating failover to a specified target standby database.**
- C. Monitoring and managing redo transport services, and log apply services.
- **D. Create a new physical standby database.**
- **E. Converting physical standby databases to snapshot standby databases.**
- F. Define logical standby database skip rules.

Answer: B,D,E

NEW QUESTION # 24

You must configure flashback database for your Oracle 19c databases that will be part of a Data Guard Broker configuration.

The databases are all in ARCHIVELOG mode.

You will execute the SQL statement:

```
ALTER DATABASE FLASHBACK ON;
```

Which three are true concerning this command?

- A. If executed successfully on an Oracle 19c primary database, flashback will also be enabled on all logical standby databases that are part of the configuration.
- **B. It will execute successfully on an Oracle 19c logical standby database while SQL apply is active.**
- **C. It will execute successfully while an Oracle 19c primary database is mounted.**
- D. It will execute successfully on an Oracle 19c physical standby database while Real Time Query is active.
- E. If executed successfully on an Oracle 19c primary database, flashback will also be enabled on all physical standby databases that are part of the configuration.
- **F. It will execute successfully while an Oracle 19c primary database is open.**

Answer: B,C,F

Explanation:

The command ALTER DATABASE FLASHBACK ON; enables the Flashback Database feature, which provides a way to quickly revert an entire Oracle database back to a previous point in time. This command can be executed while an Oracle 19c primary database is either open (option A) or mounted (option B). It is also applicable to an Oracle 19c logical standby database while SQL Apply is active (option E). However, it's important to note that enabling Flashback Database on the primary does not automatically enable it on all associated standby databases, whether they are physical or logical. Each database in a Data Guard configuration must have Flashback Database explicitly enabled if desired. Real Time Query being active on a physical standby does not directly relate to the ability to execute this command on the standby. Reference: The explanation is based on Oracle's concepts for Flashback Technology and Data Guard configurations as detailed in the Oracle Database Backup and Recovery User's Guide and the Oracle Data Guard Concepts and Administration guide.

NEW QUESTION # 25

Which four statements are true regarding SQL Apply filters for a logical standby database?

- **A. They can be used to skip ALTER SYSTEM and ALTER DATABASE commands.**
- B. They can only be used to skip DML statements on a table.
- C. They can be used to skip all SQL statements executed on a specific pluggable database (PDB) within a standby multitenant container database (CDB).
- **D. They can be used to skip ALTER TABLE commands on specific tables.**
- **E. They can be used to skip execution of DML triggers on a table while allowing the DML to execute.**
- **F. They can be used to skip CREATE TABLE commands.**
- G. They can be used to stop SQL apply if it encounters an error.

Answer: A,D,E,F

Explanation:

Based on the Oracle Database 19c documentation, the correct answers about SQL Apply filters for a logical standby database are:

A). They can be used to skip execution of DML triggers on a table while allowing the DML to execute.

B). They can be used to skip CREATE TABLE commands.

C). They can be used to skip ALTER SYSTEM and ALTER DATABASE commands.

G). They can be used to skip ALTER TABLE commands on specific tables.

Comprehensive Detailed Explanation:

SQL Apply filters in a logical standby database can be set to control which SQL operations are applied to the standby. These filters allow for certain commands to be skipped, ensuring that they do not impact the standby database. For example, filters can be used to skip the execution of DML triggers to prevent them from firing during SQL Apply, while still allowing the underlying DML to be executed on the logical standby database. This is particularly useful when certain triggers are not desired to run in a standby environment. CREATE TABLE, ALTER SYSTEM, ALTER DATABASE, and specific ALTER TABLE commands can also be skipped using SQL Apply filters to prevent unwanted structural changes or administrative operations from affecting the logical standby database. These capabilities provide a level of control to ensure that the logical standby database reflects only the desired state of the primary database.

Reference:

Oracle Database SQL Language Reference and Oracle Data Guard Concepts and Administration guide offer comprehensive details on the use of SQL Apply filters, including the range of SQL statements that can be influenced by these filters in a logical standby database environment.

NEW QUESTION # 26

Examine this list of possible steps:

1. Raise the compatibility level on both databases.
2. Restart SQL Apply on the upgraded logical standby database.
3. Start SQL Apply on the old primary database.
4. Perform a Switchover to the logical standby database.
5. Upgrade the logical standby database.
6. Upgrade the old primary database.

Which is the minimum number of steps in the correct order, to perform a rolling release upgrade of a data guard environment using an existing logical standby database and to enable the new functionality?

- A. 5,2,4,1
- B. 5,2,4,6,3,1
- C. 1,5,2,4,6,3
- D. 5,2,4,3,6,1
- E. 4,6,5,2,3,1

Answer: C

Explanation:

The process of performing a rolling release upgrade in a Data Guard environment using a logical standby database generally involves these steps:

- * Raise the compatibility level on both databases (1): Ensuring both the primary and logical standby databases are operating with the same and correct compatibility level is essential before starting the upgrade process.
 - * Upgrade the logical standby database (5): Apply the database upgrade to the logical standby first, which allows the primary database to continue serving the workload without interruption.
 - * Restart SQL Apply on the upgraded logical standby database (2): Once the logical standby has been upgraded, SQL Apply must be restarted to apply the redo data from the primary database, which is still running the earlier version.
 - * Perform a switchover to the logical standby database (4): After confirming that the logical standby database is successfully applying redo data, perform a switchover to make it the new primary database.
 - * Upgrade the old primary database (6): With the new primary database now in place, upgrade the old primary database (which is now the new standby) to the new Oracle Database release.
 - * Start SQL Apply on the old primary database (3): Finally, start SQL Apply on what is now the standby database to synchronize it with the new primary database.

NEW QUESTION # 27

There are currently 6 applier and 6 pfilepafef processes running and no idle applier processes on y logical standby database.

The max_SERVERS SQL apply parameter and number of archiver processes are both set to 12.

Identify two changes, each of which would allow you to increase the number of applier processes.

- A. Increase the processes initialization parameter. D Decrease the number of FREPARER processes.
- B. Decrease the number of archiver processes on the standby database.
- C. Increase the value for the MAX_SERVERS SQL apply parameter.
- D. Increase the parallel_max_server initialization parameter.
- E. Increase the RECOVERY_PARALLEL initialization parameter.

Answer: C,D

Explanation:

To increase the number of applier processes on a logical standby database, the following changes can be made:

C: Increasing the value for the MAX_SERVERS SQL apply parameter would allow for more applier processes to be initiated, assuming that system resources permit.

D: Increasing the PARALLEL_MAX_SERVERS initialization parameter would allow for more parallel execution processes, which can be used by SQL apply to increase the number of applier processes.

Option A is incorrect as decreasing the number of archiver processes will not necessarily increase the number of applier processes; these are unrelated components.

Option B is incorrect because the 'FREPARER' processes do not exist, it seems to be a typographical error, and the 'REPARER' is

not a valid Oracle process or parameter.

Option E is incorrect because the RECOVERY_PARALLELISM parameter controls the number of processes used for instance recovery and media recovery, not for SQL apply.

NEW QUESTION # 28

.....

If you are worried about your exam, just choose us, we will help you pass the exam and strengthen your confidence. 1z0-076 Soft test engine can stimulate the real exam environment, so that you can know the procedure of the exam, and your nerves will be decreased and your confidence will be increased. In addition, 1z0-076 Training Materials are high quality, and they can help you pass the exam just one time. If you fail to pass the exam in your first attempt after using 1z0-076 exam dumps of us, we will give you full refund.

1z0-076 Reliable Torrent: https://www.pass4cram.com/1z0-076_free-download.html

Oracle Reliable 1z0-076 Braindumps So their service spirits are excellent, The 1z0-076 reliable exam simulator is all-inclusive and contains straightaway questions and answers comprising all the important topics in the 1z0-076 actual test questions, Our 1z0-076 practice materials from our company are invulnerable, Performance reports of Oracle 1z0-076 practice test will be useful for tracking your progress and identifying areas for further study.

Learning About Filter Criteria, Owning the customer means Reliable 1z0-076 Exam Tutorial that a business has developed a strong relationship with a customer, So their service spirits are excellent.

The 1z0-076 Reliable Exam Simulator is all-inclusive and contains straightaway questions and answers comprising all the important topics in the 1z0-076 actual test questions.

100% Pass Quiz Oracle - 1z0-076 - Newest Reliable Oracle Database 19c: Data Guard Administration Braindumps

Our 1z0-076 practice materials from our company are invulnerable, Performance reports of Oracle 1z0-076 practice test will be useful for tracking your progress and identifying areas for further study.

The content of our study materials 1z0-076 is easy to be mastered and has simplified the important information.
