APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

What is the definition of a threat according to ISO/IEC 27000?

- A. A weakness of an asset or a control that can be exploited
- B. A single or a series of unwanted or unexpected information security events
- C. The risk remaining after risk treatment
- **D. A potential cause of an unwanted incident which can result in harm to a system or organization**

Answer: D

Explanation:

According to ISO/IEC 27000:2018, Clause 3.74, a threat is defined as:

"Potential cause of an unwanted incident, which can result in harm to a system or organization."

NEW QUESTION # 27

What international standard provides guidance on the integration of ISO/IEC 27001 and the IT Service Management standard?

- **A. ISO/IEC 27013**
- B. None of the above
- C. ISO/IEC 27002
- D. ISO/IEC 20000-1

Answer: A

Explanation:

ISO/IEC 27013 is titled:

"Information technology -- Security techniques -- Guidance on the integrated implementation of ISO/IEC 27001 and ISO/IEC 20000-1." This standard provides organizations with specific advice on how to integrate an Information Security Management System (ISMS) with an IT Service Management System (ITSMS). ISO/IEC

20000-1 is the IT Service Management requirements standard, but integration guidance is provided in 27013.

NEW QUESTION # 28

Which statement describes Annex A of ISO/IEC 27001?

- A. Provides measures to determine risk treatment effectiveness
- B. Defines a mandatory list of controls that shall be implemented
- **C. Provides a reference list of information security controls and their requirements**
- D. Defines the criteria for accepting risks

Answer: C

Explanation:

Annex A of ISO/IEC 27001:2022 is titled:

"Reference control objectives and controls." It provides a reference list of information security controls, structured into 4 themes: organizational, people, physical, and technological.

The standard explicitly states in Clause 6.1.3: "Organizations can design controls as required or identify them from any source.

Annex A contains a list of possible information security controls." This means controls in Annex A are not mandatory (eliminating option C). Risk acceptance criteria (A) are defined in Clause 6.1.2, not Annex A. Annex A also does not provide measures for treatment effectiveness (D).

Thus, Annex A is best described as a reference list of information security controls. Correct answer: B.

NEW QUESTION # 29

To whom are the information security policies required to be communicated, according to the control in Annex A of ISO/IEC 27001?

- A. Relevant personnel and relevant interested parties
- B. Only staff with accountability for ISMS operation
- C. Employees within the scope of the ISMS
- D. Top management

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A.5.1 (Policies for information security) clearly specifies:

"Information security policy and topic-specific policies should be defined, approved by management, published, communicated to and acknowledged by relevant personnel and relevant interested parties..." This means the communication obligation is not limited to top management (A) or only ISMS staff (B), nor does it stop at employees only (C). Instead, ISO/IEC 27001/27002 mandate a broader scope: all relevant personnel and relevant interested parties must be informed. This ensures both internal stakeholders (employees, contractors, temporary staff) and external interested parties (suppliers, partners, regulators, customers, etc.) receive the right policy communications where applicable. Therefore, the correct and verified answer is D.

NEW QUESTION # 30

Which statement describes a requirement for information security objectives?

- A. They shall be reviewed at least annually
- B. They shall be consistent with the information security policy
- C. They shall be contractually transferred to third parties
- D. They shall all be measurable

Answer: B

Explanation:

Clause 6.2 (Information security objectives) requires that objectives:

* "be consistent with the information security policy"

* "be measurable (if practicable)"

* "take into account applicable information security requirements"

* "be monitored, communicated, and updated as appropriate."

From this, option A is correct since consistency with policy is an explicit requirement. Option B is incorrect because the standard allows objectives to be measurable "if practicable" (not mandatory for all). Option C is incorrect—objectives are not transferred contractually to third parties, though third-party agreements may include security requirements. Option D is incorrect because the standard requires regular review "as appropriate," not a fixed annual cycle.

Thus, the verified requirement is A: They shall be consistent with the information security policy.
