

Dumps MCD-Level-2 Torrent, Latest MCD-Level-2 Questions

MULESOFT MCD-LEVEL-2 CERTIFIED DEVELOPERS

With vast experience in this field, ITexamReview always comes forward to provide its valued customers with authentic, actual, and genuine MCD-Level-2 exam dumps at an affordable cost. All the MuleSoft Certified Developer - Level 2 (Mule 4) (MCD-Level-2) questions given in the product are based on actual examination topics. ITexamReview provides three months of free updates if you purchase the MuleSoft MCD-Level-2 Questions and the content of the examination changes after that.

With all this reputation, our company still take customers first, the reason we become successful lies on the professional expert team we possess, who engage themselves in the research and development of our MCD-Level-2 learning guide for many years. So we can guarantee that our MCD-Level-2 exam materials are the best reviewing material. Concentrated all our energies on the study MCD-Level-2 learning guide we never change the goal of helping candidates pass the exam. Our MCD-Level-2 test questions' quality is guaranteed by our experts' hard work. So what are you waiting for? Just choose our MCD-Level-2 exam materials, and you won't be regret.

Latest MCD-Level-2 Questions | MCD-Level-2 Authorized Exam Dumps

Our MCD-Level-2 study prep has a pass rate of 98% to 100% because of the high test hit rate. So our MCD-Level-2 study materials are not only effective but also useful. As we all know, time is very important to everyone. Some candidates are very busy with their own work and families. It is very difficult to take time out to review the MCD-Level-2 Exam. But if you use MCD-Level-2 exam materials, you will learn very little time and have a high pass rate. Our MCD-Level-2 study materials are worthy of your trust.

MuleSoft Certified Developer - Level 2 (Mule 4) Sample Questions (Q17-Q22):

NEW QUESTION # 17

An API has been built to enable scheduling email provider. The front-end system does very little data entry validation, and problems have started to appear in the email that go to patients. A validate-customer flow is added to validate the data.

What is the expected behavior of the 'validate-customer' flow?

```
<flow name="validate-customer">
  <validation:all>
    <validation:is-email email="#[payload.customer.emailAddress]" message="invalid email address">
      <error-mapping sourceType="VALIDATION:INVALID_EMAIL" targetType="SCHEDULE:INVALID_EMAIL_ADDRESS"/>
    </validation:is-email>
    <validation:matches-regex value="#[payload.schedule.appointmentDate]"
      regex="^\d{4}-\d{2}-\d{2}$" message="Invalid appointment date">
      <error-mapping sourceType="VALIDATION:MISMATCH" targetType="SCHEDULE:INVALID_APPOINTMENT_DATE"/>
    </validation:matches-regex>
    <validation:is-not-null value="#[payload.customer.name]" message="Invalid customer name">
      <error-mapping sourceType="VALIDATION:NULL" targetType="SCHEDULE:INVALID_CUSTOMER_NAME"/>
    </validation:is-not-null>
  </validation:all>
</flow>
```

- A. If all of the values are invalid the last validation error is raised: SCHEDULE:INVALID_CUSTOMER_NAME
- B. If the appointment date and customer name are invalid, a SCHEDULE:INVALID_APPOINTMENT_DATE error is raised
- C. If only the email address is invalid a VALIDATION.INVALID_EMAIL error is raised
- D. If the email address is invalid, processing continues to see if the appointment data and customer name are also invalid

Answer: C

Explanation:

Explanation

The validate-customer flow uses an until-successful scope to validate each field of the customer data. The until-successful scope executes its processors until they succeed or exhausts the maximum number of retries.

If any processor fails, it raises an error and stops executing the remaining processors. Therefore, if only the email address is invalid, a VALIDATION.INVALID_EMAIL error is raised and the validation of appointment date and customer name is skipped.

<https://docs.mulesoft.com/mule-runtime/4.3/until-successful-scope>

NEW QUESTION # 18

A Mule application includes a subflow containing a Scatter-Gather scope. Within each leg of the Scatter-Gather, an HTTP connector calls a PUT endpoint to modify records in a different upstream system. The subflow is called inside an until-successful scope to retry if a transitory exception is raised.

A technical spike is being performed to increase reliability of the Mule application.

Which steps should be performed within the Mule flow above to ensure idempotent behavior?

- A. Ensure an error-handling flow performs corrective actions to roll back all changes if any leg of the Scatter-Gather fails
- B. None, the flow already exhibits idempotent behavior
- C. Remove the PUT requests from the Scatter-Gather and perform them sequentially
- D. Change the PUT requests inside the Scatter-Gather to POST requests

Answer: A

Explanation:

Explanation

To ensure idempotent behavior within a Mule flow that contains a subflow with a Scatter-Gather scope, the developer should ensure an error-handling flow performs corrective actions to roll back all changes if any leg of the Scatter-Gather fails. Idempotency means that multiple identical requests have the same effect as a single request. Therefore, if one of the HTTP requests inside the Scatter-Gather fails, the error-handling flow should undo any changes made by other successful requests to ensure consistency and avoid partial updates.

References: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept>

NEW QUESTION # 19

Two APIs are deployed to a two-node on-prem cluster. Due to a requirements change, the two APIs must communicate to exchange data asynchronously.

- A. The VM Connector is used to inter-application communication, so it is not possible to use the VM Connector
- B. Instead of using the VM Connector use <flow-ref> directly
- **C. If the two APIs use the same domain, the VM Connector can be leveraged**
- D. It is not possible to use the VM Connector since the APIs are running in a cluster mode and each mode has its own set of VM Queues

Answer: C

Explanation:

Explanation

To communicate asynchronously between two APIs deployed to a two-node on-prem cluster, the developer can use the VM Connector if the two APIs use the same domain. The VM Connector allows passing messages between different Mule applications within a single Mule runtime instance or across different instances using shared memory or persistent storage. If two APIs are deployed under the same domain, they can share resources such as VM queues and communicate asynchronously using VM Connector operations. References:

<https://docs.mulesoft.com/mule-runtime/4.3/vm-connector>

<https://docs.mulesoft.com/mule-runtime/4.3/shared-resources>

NEW QUESTION # 20

An organization uses CloudHub to deploy all of its applications.

How can a common-global-handler flow be configured so that it can be reused across all of the organization's deployed applications?

- A. Create a Mule plugin project
Create a common-global-error-handler flow inside the plugin project.
Use this plugin as a dependency in all Mule applications.
Import that configuration file in Mule applications.
- B. Create a common-global-error-handler flow in all Mule Applications Refer to it flow-ref wherever needed.
- **C. Create a Mule Plugin project**
Create a common-global-error-handler flow inside the plugin project.
Use this plugin as a dependency in all Mule applications
- D. Create a Mule domain project.
Create a common-global-error-handler flow inside the domain project.
Use this domain project as a dependency.

Answer: C

Explanation:

To configure a common-global-handler flow that can be reused across all of the organization's deployed applications, the developer should create a Mule Plugin project, create a common-global-error-handler flow inside the plugin project, and use this plugin as a dependency in all Mule applications. This way, the developer can import the common-global-error-handler flow in any application that needs it and avoid duplicating the error handling logic.

References: <https://docs.mulesoft.com/mule-runtime/4.3/error-handling#global-error-handler>

NEW QUESTION # 21

A developer deploys an API to CloudHub and applies an OAuth policy on API Manager. During testing, the API response is slow, so the developer reconfigures the API so that the out-of-the-box HTTP Caching policy is applied first, and the OAuth API policy is applied second.

What will happen when an HTTP request is received?

- A. In case of a cache miss, only the HTTP Caching policy is evaluated; then the API retrieves the data from the API implementation, and the policy stores the data to be cached in Object Store
- B. In case of a cache miss, both the OAuth and HTTP Caching policies are evaluated; then the API retrieves the data from the API implementation, and the policy does not store the data in Object Store
- C. In case of a cache hit, both the OAuth and HTTP Caching policies are evaluated; then the cached response is returned to the caller
- D. In case of a cache hit, only the HTTP Caching policy is evaluating; then the cached response is returned to the caller

Answer: D

Explanation:

Explanation

When an HTTP request is received and the HTTP Caching policy is applied first, it checks if there is a cached response for that request in Object Store. If there is a cache hit, meaning that a valid cached response exists, then only the HTTP Caching policy is evaluated and the cached response is returned to the caller without invoking the OAuth policy or the API implementation. If there is a cache miss, meaning that no valid cached response exists, then both the HTTP Caching policy and the OAuth policy are evaluated before invoking the API implementation. References:

<https://docs.mulesoft.com/api-manager/2.x/http-caching-policy#policy-ordering>

NEW QUESTION # 22

.....

How to pass the MCD-Level-2 exam successfully and quickly? The answer lies in our valid and excellent MCD-Level-2 training guide. We have already prepared our MCD-Level-2 training materials for you. They are professional MCD-Level-2 practice material under warranty. Accompanied with acceptable prices for your reference, all our MCD-Level-2 Exam Materials with three versions are compiled by professional experts in this area more than ten years long.
