## CompTIA A+ Certification Exam: Core 1 Sample Questions (Q176-Q181):

#### NEW QUESTION # 176

A user is receiving many unsolicited emails. Which of the following controls can be configured to best reduce these types of emails?

- A. Proxy servers
- **B. Spam gateway**
- C. Load balancer
- D. Mail forwarding

**Answer: B**

Explanation:

A spam gateway filters unsolicited emails at the server level, significantly reducing spam before it reaches user inboxes.

Why Not A (Load balancer): Load balancers distribute traffic but don't filter spam.

Why Not C (Mail forwarding): Forwarding doesn't filter spam.

Why Not D (Proxy servers): Proxies control web traffic, not email filtering.

CompTIA A+ Exam Reference: Core 2 (220-1102), Section 2.10, email security controls.

#### NEW QUESTION # 177

A human resources manager printed a sensitive termination document and forgot to retrieve it from the printer. Which of the following prevents this situation?

- A. Duplex
- B. Wireless encryption
- C. Printer share
- **D. Badging**

**Answer: D**

Explanation:

Secure badging-often used with "pull printing" or "secure print release"-requires users to authenticate at the printer before documents are printed. CompTIA A+ highlights this feature as critical for protecting sensitive data in corporate environments. With badge-based printing, jobs stay in a secure print queue until the authorized user physically scans their badge.

This prevents confidential documents, like HR termination notices, from sitting unattended in the output tray.

It also reduces print waste and ensures accountability for printed materials.

Duplex printing (B) simply prints double-sided pages. Printer sharing (C) allows multiple users to use a printer but does not provide security. Wireless encryption (D) protects network traffic but does not address abandoned print jobs.

Therefore, badging / secure print release is the correct protective measure.

#### NEW QUESTION # 178

A technician is experimenting with network configurations and has connected two laptops to an unmanaged switch. The technician configured one of the laptops with a static IP address of 192.168.1.1 and the other with a static IP address of 192.168.2.2. The laptops are not communicating with each other. Which of the following is the most likely explanation for this issue?

- A. The wireless NICs are malfunctioning.
- B. PoE interferes with intersubnet communication.
- **C. The laptops do not have access to a router.**
- D. The technician needs to use a hub instead of a switch.

**Answer: C**

#### NEW QUESTION # 179

A technician recently updated the firmware on a dual-BIOS motherboard. Following the update, the system has been stuck in a boot loop and cannot start an OS from any internal or external device. The technician cannot access the UEFI menu either. Which of the following should the technician do next?

- A. Downgrade the firmware via USB.
- **B. Enable the secondary configuration.**
- C. Reapply thermal paste to the CPU.

- D. Start a warranty repair of the motherboard.

**Answer: B**

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Dual-BIOS motherboards contain two firmware chips. If the primary BIOS becomes corrupted, the system can failover to the secondary BIOS. Most boards allow manual enabling of the secondary BIOS via a physical switch or jumper.

\* Option B: Downgrading firmware may not be possible if the system won't POST or access UEFI.

\* Option C: Not necessary until both BIOS chips are non-functional.

\* Option D: Thermal paste affects heat dissipation, not BIOS/boot behavior.

CompTIA A+ Core 1 Exam Objective Reference:

\* Objective 3.5: Given a scenario, troubleshoot problems related to motherboards, RAM, CPU, and power.

### NEW QUESTION # 180

A user is having issues when charging a device with a Lightning cable. The cable is not recognized when it is plugged into the device. This issue is usually resolved by flipping the cable over. This issue does not occur with other devices of the same type. Which of the following would most likely cause the issue?

- A. The battery may be swelling and needs inspection.
- B. The device needs to be restarted.
- C. The cable is failing and needs to be replaced
- **D. The charging port is dirty or damaged**

**Answer: D**

Explanation:

When a Lightning cable works only when flipped a certain way or doesn't function consistently, it is typically due to debris or damage in the charging port. Cleaning the port or inspecting it for wear resolves the issue.
