New CompTIA 220-1202 Test Format - 220-1202 Reliable Test Guide

All kinds of exams are changing with dynamic society because the requirements are changing all the time. To keep up with the newest regulations of the 220-1202 exam, our experts keep their eyes focusing on it. And the 220-1202 study tool can provide a good learning platform for users who want to get the test 220-1202 Certification in a short time. If you can choose to trust us, I believe you will have a good experience when you use the A+ study guide, and you can pass the exam and get a good grade in the test 220-1202 certification.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q49-Q54):

NEW QUESTION # 49

A technician needs to download and install a new web browser on a desktop. Which attribute should be used to verify the installer's authenticity?

- A. Date
- B. Name
- C. Size
- D. Hash

Answer: D

Explanation:

Hash values (like SHA256) are published by vendors to verify file integrity. A match confirms the file hasn't been tampered with.

From Travis Everett - CompTIA A+ All-in-One Exam Guide:

"Use hash values to ensure downloaded software matches the vendor's published version and hasn't been modified."

NEW QUESTION # 50

A user takes an iOS-based smartphone to a repair shop due to performance issues. The technician observes:

Battery charge: 25%

Battery health: 90%

Hotspot: On

Used space: 63.76GB / 64GB

Which of the following is the most likely cause of the performance issue?

- A. Too many applications are open
- B. The device is running out of free space
- C. The battery health is low
- D. The hotspot is degrading the performance
- E. The phone is not sufficiently charged

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Running at near full storage capacity significantly slows down smartphones. iOS in particular requires space for caching and temporary files. Performance improves when storage is cleared.

From Mike Meyers' Lab Manual:

"Lack of free space causes mobile operating systems to struggle with temp files and updates. Performance improves significantly with adequate storage."

NEW QUESTION # 51

A user has rooted their corporate phone to load unapproved software. Which of the following tools should the company use to prevent access to the corporate network?

- A. Lock screen
- B. Encryption
- C. Mobile device management
- D. Geofencing

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Mobile Device Management (MDM) allows an organization to enforce security policies, such as denying network access to jailbroken/rooted devices.

From the All-in-One Exam Guide by Travis Everett and Andrew Hutz:

"MDM software allows administrators to monitor, manage, and secure mobile devices connected to enterprise networks. One key feature is the detection and denial of access for rooted or jailbroken devices".

Quentin Docter also confirms:

"An MDM solution can check if a device has been rooted and prevent it from accessing the network, ensuring compliance with corporate security standards".

NEW QUESTION # 52

Performance on a user's smartphone is degrading. Applications take a long time to start, and switching between windows also takes a long time. Which of the following diagnostic steps should a mobile technician take first?

- A. Restore the phone to factory settings

- B. Check the phone's battery state
- C. Uninstall unneeded applications
- D. **Restart the phone**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The first step in troubleshooting degraded mobile performance is typically a restart. This clears RAM and stops background processes that might be causing issues.

From All-in-One Exam Guide:

"Before taking invasive measures like a factory reset, always restart the device. A reboot clears temporary files and can significantly improve responsiveness."

NEW QUESTION # 53

A user has been adding data to the same spreadsheet for several years. After adding a significant amount of data, they are now unable to open the file. Which of the following should a technician do to resolve the issue?

- A. Upgrade the network connection speed.
- B. Defragment the storage drive.
- C. Revert the spreadsheet to the last restore point.
- D. **Increase the amount of RAM.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

When a spreadsheet becomes very large, opening and processing it requires more memory (RAM). If the system doesn't have sufficient memory, it may fail to load the file properly. Upgrading or increasing the available RAM can resolve performance and loading issues with very large files.

A: Restore points roll back system settings, not individual file content.

C: Defragmentation optimizes disk performance but won't help with memory issues.

D: Network speed has no effect if the file is stored and opened locally.
