SC-200최신 시험대비 공부자료 덤프 최신 업데이트 버전

DumpTOP의 Microsoft SC-200덤프를 구매하기전 우선 pdf버전 덤프샘플을 다운받아 덤프문제를 공부해보시면 DumpTOP덤프품질에 신뢰가 느껴질것입니다. DumpTOP의 Microsoft SC-200덤프가 고객님의 시험패스때 조금이나마 도움이 되신다면 행복으로 느끼겠습니다.

Microsoft SC-200 시험을 통과하려면 응시자는 보안 운영 개념, 도구 및 기술에 대한 깊은 이해를 가져야합니다. 또한 보안 데이터를 분석하고 위협을 식별하며 보안 사고에 효과적으로 대응할 수 있어야합니다. Azure Sentinel 및 Endpoint의 Microsoft Defender와 같은 Microsoft Security Technologies에 대한 강력한 지식도 필수적입니다.

최신 Microsoft Certified: Security Operations Analyst Associate SC-200 무료 샘플문제 (Q79-Q84):

질문 # 79

You need to implement Azure Sentinel queries for Contoso and Fabrikam to meet the technical requirements.

What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Minimum number of Log Analytics workspaces required in the Azure subscription of Fabrikam:

0
1
2
3

Query element required to correlate data between tenants:

extend
project
workspace

정답:

설명:

Minimum number of Log Analytics workspaces required in the Azure subscription of Fabrikam:

0
1
2
3

Query element required to correlate data between tenants:

extend
project
workspace

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/extend-sentinel-across-workspaces-tenants> This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Litware Inc. is a renewable company.

Litware has offices in Boston and Seattle. Litware also has remote users located across the United States. To access Litware

resources, including cloud resources, the remote users establish a VPN connection to either office.

질문 # 80

You are responsible for responding to Azure Defender for Key Vault alerts.

During an investigation of an alert, you discover unauthorized attempts to access a key vault from a Tor exit node.

What should you configure to mitigate the threat?

- A. role-based access control (RBAC) for the key vault
- B. the access policy settings of the key vault
- C. Azure Active Directory (Azure AD) permissions
- D. Key Vault firewalls and virtual networks

정답: D

설명:

To be able to prevent unauthorized access to the key vault through suspicious IPs you have to change the networking settings under the key vault resource.

<https://docs.microsoft.com/en-us/azure/key-vault/general/network-security>

질문 # 81

You have an Azure subscription that uses Azure Defender.

You plan to use Azure Security Center workflow automation to respond to Azure Defender threat alerts.

You need to create an Azure policy that will perform threat remediation automatically.

What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Set available effects to:

Append
DeployIfNotExists
EnforceRegoPolicy

To perform remediation use:

An Azure Automation runbook that has a webhook
An Azure Logic Apps app that has the trigger set to When an Azure Security Center Alert is created or triggered
An Azure Logic Apps app that has the trigger set to When a response to an Azure Security Center alert is triggered

정답:

질문 # 82

You have a Microsoft Sentinel workspace that has User and Entity Behavior Analytics (UEBA) enabled. You need to identify all the log entries that relate to security-sensitive user actions performed on a server named Server1. The solution must meet the following requirements:

- * Only include security-sensitive actions by users that are NOT members of the IT department.
- * Minimize the number of false positives.

How should you complete the query? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

```

SecurityEvent
| where EventID in ("4624","4672")
| where Computer == "SERVER1"
| join kind=inner (
| join kind=fullouter (
| join kind=inner (
| join kind=innerunique (
IdentityInfo
BehaviorAnalytics
IdentityInfo
| where SecurityEvent
  
```

These are the selections for the first missing value.

정답:

Answer Area

```

SecurityEvent
| where EventID in ("4624","4672")
| where Computer == "SERVER1"
| join kind=inner (
| join kind=fullouter (
| join kind=inner (
| join kind=innerunique (
IdentityInfo
BehaviorAnalytics
IdentityInfo
| where SecurityEvent
  
```

These are the selections for the first missing value.

질문 # 83

You have a Microsoft 365 subscription. The subscription contains 500 Windows 11 devices that are onboarded to Microsoft Defender for Endpoint.

You need to perform the following actions in Microsoft Defender XDR:

- * For your company's finance department, populate random endpoints with fake cached credentials.
- * Ensure That an incident is created in Microsoft Defender XDR if an attacker attempts to use the fake cached credentials.

The solution must ensure that the fake cached credentials are planted only on endpoints of the finance department.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Actions

- ⋮ From the Endpoints settings, create a device group.
- ⋮ From the Endpoints settings, create a custom detection rule.
- ⋮ From the Endpoints settings, create a basic lure.
- ⋮ From the Identities settings, configure a Honeytoken account.
- ⋮ From the Microsoft Defender XDR settings, assign a device tag.
- ⋮ From Advanced features of the Endpoints settings, set Deception to On.
- ⋮ From the Endpoints settings, create an advanced lure.

Answer Area

정답:

설명:

Explanation:

<p>ACTIONS</p> <ul style="list-style-type: none"> ⋮ From the Endpoints settings, create a device group. ⋮ From the Endpoints settings, create a custom detection rule. ⋮ From the Endpoints settings, create a basic lure. ⋮ From the Identities settings, configure a Honeytoken account. 	<p>1</p> <p>2</p> <p>3</p>	<p>Answer Area</p> <ul style="list-style-type: none"> ⋮ From the Microsoft Defender XDR settings, assign a device tag. ⋮ From Advanced features of the Endpoints settings, set Deception to On. ⋮ From the Endpoints settings, create an advanced lure.
---	----------------------------	---

Microsoft Defender XDR (Defender for Endpoint deception) lets you plant advanced lures such as fake cached credentials on endpoints and raise incidents if an attacker tries to use them. To scope lures only to the finance machines, you first create a device

group targeting those endpoints (e.g., using tags or attributes).

Defender deception supports scoping rules so that planting occurs only on devices in the selected group- meeting the "finance-only" requirement.

To ensure an incident is created when the fake credentials are used, you configure a Honeytoken account (Identities). Honeytokens are decoy identities monitored by Microsoft Defender; any authentication attempt using these credentials generates high-fidelity alerts/incidents. After the honeytoken exists, create an advanced lure (not a basic lure) under Endpoints # Deception, select cached credentials as the lure type, associate it with the finance device group, and tie it to the honeytoken. Defender plants the decoy credentials on a random subset of targeted devices and automatically triggers incidents on attempted use-no custom detection rule required.

Thus, the correct sequence to satisfy all goals with least steps is: create device group # configure honeytoken # create advanced lure.

질문 # 84
