SAP Certified Associate - SAP SuccessFactors Employee Central Core Sample Questions (Q31-Q36):

NEW QUESTION # 31

This is a global customer and HR admins will be assigned based on legal entity. The HR admins should be getting approval workflows from their target population.

How can you define this in one workflow?

- A. Create permission groups for each legal entity and assign them to the HR admin role.
- B. Create dynamic groups per each legal entity and add the necessary approver steps.
- C. Create a dynamic role using the Legal Entity filter and assign the Resolver type as dynamic group
- D. Create a dynamic role for each legal entity and assign the Resolver as the head of the legal entity.

Answer: C

Explanation:

For a global customer where HR admins are assigned based on legal entities and need to receive approval workflows for their target population, you can configure the workflow as follows:

Create a Dynamic Role using the Legal Entity filter.

Assign the Resolver Type as a Dynamic Group to ensure the workflow automatically routes to the correct HR admin based on the legal entity.

This configuration avoids creating multiple static workflows and simplifies management by dynamically resolving approvers based on the legal entity.

Scenario 2: Approvals for Self-Service

NEW QUESTION # 32

Your customer needs to set up a workflow to direct approval processes to the head of a business unit.

Which approver type do you use?

- A. Dynamic Group
- **B. Dynamic Role**
- C. Role
- D. Manager

Answer: B

Explanation:

To direct approval processes to the head of a business unit, you use a Dynamic Role. This approver type allows you to dynamically assign approval tasks based on relationships such as the head of a specific organizational structure.

A Manager approver type refers to direct line managers, which is different from business unit heads.

Dynamic Groups and Roles do not specifically address the dynamic nature of organizational roles like a business unit head.

NEW QUESTION # 33

What must be done to ensure that you can use a custom generic (MDF) object for Employee Self-Service?

Note: There are 2 correct answers to this question.

- **A. Create one configuration UI for the object.**
- B. Create a Valid When association for the object.
- C. Set the externalName field to Data Type = User.
- **D. Set the externalCode field to Data Type = User.**

Answer: A,D

Explanation:

To enable a custom Generic (MDF) object for Employee Self-Service (ESS) in SAP SuccessFactors Employee Central, the following configurations are necessary:

* C. Create one configuration UI for the object.

* A Configuration UI (User Interface) must be created for the MDF object to define how users will interact with it. This UI facilitates data entry and management within the ESS framework.

SAP Learning Hub

* D. Set the externalCode field to Data Type = User.

* The externalCode field should be set to the 'User' data type. This configuration ensures that the object is associated with specific user records, enabling personalized data management within ESS.

SAP Learning Hub

Options A and B are not required for enabling a custom MDF object for Employee Self-Service:

* A. Set the externalName field to Data Type = User.

* The externalName field typically holds descriptive information and does not need to be set to the 'User' data type for ESS functionality.

* B. Create a Valid When association for the object.

* While associations can define relationships between objects, a 'Valid When' association is not a prerequisite for enabling ESS capabilities for a custom MDF object.

NEW QUESTION # 34

Which of the following can you use to explore released APIs?

- A. SAP Application Interface Framework
- **B. SAP Business Accelerator Hub**
- C. SAP Integration Suite

Answer: B

Explanation:

The SAP Business Accelerator Hub is the primary platform for exploring released APIs.

* It provides a central repository where developers can browse, test, and integrate various APIs across SAP solutions.

* The hub is designed for simplifying API access and ensuring integration consistency in SAP environments. Other options like SAP Application Interface Framework and SAP Integration Suite focus on integration but do not primarily serve as a platform for exploring APIs.

NEW QUESTION # 35

In which entities is Alert Notification supported? Note: There are 2 correct answers to this question.

- A. Address Information
- B. Personal Information
- **C. Job Information**
- **D. Pay Component Recurring**

Answer: C,D

Explanation:

Alert Notifications in SAP SuccessFactors Employee Central are supported in the following entities:

Job Information: Alerts can be configured to notify relevant parties about changes or updates in an employee's job information, such as position changes, promotions, or transfers.

Pay Component Recurring: Alerts can be set up to inform stakeholders about modifications in recurring pay components, including salary adjustments, bonuses, or other regular compensation elements.

These notifications facilitate proactive management of employee data changes, ensuring that appropriate actions are taken promptly.
