Topic	Details
Topic 1	<ul style="list-style-type: none">• LEED Process: This section of the exam measures the skills of sustainability consultants and covers the foundational aspects of LEED, including organization fundamentals, the structure of LEED rating systems, and the LEED certification process. It emphasizes understanding the goals and objectives of each credit category and how they contribute to sustainable building practices.
Topic 2	<ul style="list-style-type: none">• Location and Transportation: This section of the exam measures the skills of urban planners and covers site selection criteria and alternative transportation strategies. It emphasizes choosing sites that minimize environmental impact and promote sustainable transportation options.
Topic 3	<ul style="list-style-type: none">• Project Surroundings and Public Outreach: This section of the exam measures the skills of community engagement specialists and covers the environmental impacts of buildings, green building codes, and the values of sustainable design. It also includes regional design considerations and public outreach strategies.
Topic 4	<ul style="list-style-type: none">• Indoor Environmental Quality: This section of the exam measures the skills of indoor air quality specialists and covers strategies for improving indoor air quality, lighting, acoustics, and occupant comfort. It emphasizes the use of low-emitting materials and green cleaning practices.
Topic 5	<ul style="list-style-type: none">• Integrative Strategies: This section of the exam measures the skills of project managers and focuses on the integrative process in LEED projects. It includes understanding the roles of various team members and standards that support LEED, such as ASHRAE and ENERGY STAR guidelines. This section highlights the importance of collaboration and systems thinking in achieving sustainable design.
Topic 6	<ul style="list-style-type: none">• Energy and Atmosphere: This section of the exam measures the skills of energy efficiency engineers and covers building loads, energy efficiency measures, and alternative energy practices. It emphasizes commissioning, energy auditing, and the use of renewable energy sources.
Topic 7	<ul style="list-style-type: none">• Water Efficiency: This section of the exam measures the skills of water conservation specialists and covers strategies for reducing water usage both indoors and outdoors. It includes the use of gray water and rainwater in irrigation and the implementation of low-flow fixtures.
Topic 8	<ul style="list-style-type: none">• Materials and Resources: This section of the exam measures the skills of sustainable materials specialists and focuses on reuse, life-cycle impacts, waste management, and environmentally preferable purchasing practices. It highlights the importance of material selection in reducing environmental impacts.

USGBC LEED Green Associate Exam Sample Questions (Q133-Q138):

NEW QUESTION # 133

Which of the following statements regarding non-potable water is true?

- A. Stormwater runoff can be treated and used in a facility's cooling towers
- B. can be used for any household purpose as long as it is not consumed
- C. Blackwater can only be used for flush fixtures
- D. Captured rainwater must be treated before it can be used to irrigate landscaping

Answer: A

Explanation:

Stormwater runoff can indeed be treated and used in a facility's cooling towers. This is an example of using non-potable water (water that is not of drinking quality) for purposes that do not require potable water. Other uses for treated stormwater might include

toilet flushing or irrigation. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 134

Which third party certification is recommended to use when specifying sustainable cleaning products?

- A. Design for the Environment
- B. Green Label Plus*
- C. Greenguard"
- **D. Green Seal"**

Answer: D

Explanation:

Green Seal is a third-party certification program that evaluates the environmental impacts of cleaning products and services. It has standards for various categories of products, such as cleaners, paper products, hand soaps, and floor care. Green Seal certified products meet rigorous performance, health, and environmental criteria. By using Green Seal certified products, projects can reduce the exposure of building occupants and maintenance personnel to potentially harmful chemicals, improve indoor air quality, and support sustainable purchasing practices. NEW QUESTION # 135

Which of the following is a source of graywater?

- A. Urinals
- B. Toilets
- C. Sprinklers
- **D. Lavatory faucets**

Answer: D

Explanation:

Explanation

Graywater refers to relatively clean wastewater from domestic activities such as washing dishes, laundry, and bathing. Water from lavatory faucets falls into this category. Graywater can be treated and reused for non-potable purposes such as toilet flushing or irrigation, which can help conserve water. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 136

When should the Commissioning Authority (CxA) be brought onto the project team?

- A. Early in the Post-Occupancy Evaluation (POE)
- B. Once Construction Administration (CA) begins
- **C. Early in the Schematic Design (SD) phase**
- D. At the end of Design Development (DD)

Answer: C

Explanation:

According to LEED v4, the commissioning authority (CxA) should be contracted before the end of the Design Development (DD) phase and should be involved in the project team from early in the Schematic Design (SD) phase 1.
