Salesforce-MuleSoft-Developer-I – 100% Free Valid Exam Cost | Updated Salesforce Certified MuleSoft Developer (Mule-Dev-201) Latest Study Guide

Many customers may doubt the quality of our Salesforce-MuleSoft-Developer-I learning quiz since they haven't tried them. But our Salesforce-MuleSoft-Developer-I training engine is reliable. What you have learnt on our Salesforce-MuleSoft-Developer-I exam materials are going through special selection. The core knowledge of the real exam is significant. With our guidance, you will be confident to take part in the Salesforce-MuleSoft-Developer-I Exam. Our Salesforce-MuleSoft-Developer-I study materials will be your good assistant. Put your ideas into practice.

Salesforce Salesforce-MuleSoft-Developer-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Accessing and Modifying Mule Events: It describes the Mule event data structure. Moreover, the topic focuses on usage of transformers and enriching Mule events.
Topic 2	<ul style="list-style-type: none">Deploying and Managing APIs and Integrations: It includes packaging Mule applications for deployment and deploying them to CloudHub. This topic also involves using CloudHub properties, creating and deploying API proxies, connecting an API implementation to API Manager, and applying policies to secure an API.

Topic 3	<ul style="list-style-type: none"> • Building API Implementation Interfaces: This topic involves manually creating a RESTful interface for a Mule application and generating a REST Connector from a RAML specification. It also includes describing the features and benefits of APIkit.
Topic 4	<ul style="list-style-type: none"> • Transforming Data with DataWeave: It involves writing DataWeave scripts and using DataWeave functions. This topic also includes defining and using DataWeave variables, functions, and modules, and applying correct syntax.
Topic 5	<ul style="list-style-type: none"> • Structuring Mule Applications: Structuring Mule applications covers parameterizing an application and defining and reusing global configurations. It includes breaking an application into multiple flows using private flows, subflows, and the Flow Reference component.
Topic 6	<ul style="list-style-type: none"> • Debugging and Troubleshooting Mule Applications: Using breakpoints to inspect a Mule event during runtime, installing missing Maven dependencies, and reading and deciphering Mule log error messages are sub-topics of this topic.
Topic 7	<ul style="list-style-type: none"> • Using Connectors: It focuses on retrieving data from REST services using HTTP Request or REST Connector. Moreover, the topic covers using a Web Service Consumer connector for SOAP web services and the Transform Message component.
Topic 8	<ul style="list-style-type: none"> • Creating Application Networks: The topic of creating Application Networks encompasses understanding MuleSoft's proposal for closing the IT delivery gap and describing the role and characteristics of the modern API. It also includes the purpose and roles of a Center for Enablement (C4E), and the benefits of API-led.
Topic 9	<ul style="list-style-type: none"> • Processing Records: Processing records includes methods for processing individual records in a collection and explaining how Mule events are processed by the For Each scope. It also involves using the Batch Job with Batch Steps and a Batch Aggregator.
Topic 10	<ul style="list-style-type: none"> • Handling Errors: Handling errors includes describing default error handling in Mule applications and defining custom global default error handlers. It involves comparing On Error Continue and On Error Propagate scopes, creating error handlers for a flow, using the Try scope, and mapping errors to custom application errors.
Topic 11	<ul style="list-style-type: none"> • Routing Events: It focuses on using the Choice router for conditional logic and the Scatter-Gather router to multicast events. This topic also involves validating data by using the Validation module.

Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q128-Q133):

NEW QUESTION # 128

According to MuleSoft, what is the Center for Enablement's role in the new IT operating model?

- **A. Creates and manages discoverable assets to be consumed by line of business developers**
- B. Implements line of business projects to enforce common security requirements
- C. Centrally manages partners and consultants to implement line of business projects
- D. Implements line of business projects to enforce common security requirements

Answer: A

Explanation:

Correct answer is Creates and manages discoverable assets to be consumed by line of business developers.

C4E does not get directly involved in projects.

NEW QUESTION # 129

Refer to the exhibit.

```

#%RAML 1.0
title: ACME Telecom API
version: 1.0

/plans:
  get:
    responses:
      200:
        body:
          application/json:
            example: |
              [
                {
                  "plan_type": "Super Saver 500",
                  "plan_details": "all-inclusive",
                  "monthly_discount": 0.10
                },
                {
                  "plan_type": "Business Plus 1000",
                  "plan_details": "business package",
                  "monthly_discount": 0.20
                }
              ]

```

The API needs to be updated using the company-wide standard for the Plan data type. The Object data type has already been published in Anypoint Exchange with the global reference . ACME/DataTypes /PlanDataType.raml.

What is a valid RAML specification that reuses the Plan data type?

```

#%RAML 1.0
title: ACME Telecom API
version: 1.0

types:
  Plan: !include ACME/DataTypes/PlanDataType.raml

/plans:
  get:
    responses:
      200:
        body:
          application/json:
            type: Plan[]
            example: !include ACME/Examples/PlanExamples.raml

```

• A.

```

#%RAML 1.0
title: ACME Telecom API
version: 1.0

types:
  Plan: !reference ACME/DataTypes/PlanDataType.raml

/plans:
  get:
    responses:
      200:
        body:
          application/json:
            type: Plan[]
            example: !reference ACME/Examples/PlanExamples.raml

```

• B.

- ```

#%RAML 1.0
title: ACME Telecom API
version: 1.0

dataTypes:
 Plan: !include ACME/DataTypes/PlanDataType.raml

/plans:
 get:
 responses:
 200:
 body:
 application/json:
 type: Plan[]
 example: !include ACME/Examples/PlanExamples.raml

```
- ```

#%RAML 1.0
title: ACME Telecom API
version: 1.0

dataTypes:
  Plan: !reference ACME/DataTypes/PlanDataType.raml

/plans:
  get:
    responses:
      200:
        body:
          application/json:
            type: Plan[]
            example: !reference ACME/Examples/PlanExamples.raml

```

Answer: A

Explanation:

As can be seen in RAML, POST expects input in application/json format which eliminates two of the options as two options are in xml format.

Now out of the two remaining options, one has id field in request which is only mentioned for get response and not for POST request. Hence id field is not expected in POST request.

Hence correct answer is

```

{
  "name": "GoerdiLa Forge",
  "address": "1 Westland CA",
  "customer_since": "2014-01-04",
  "balance": "4829.29",
  "bank_agend_id": "12556"
}

```

NEW QUESTION # 130

Refer to the exhibits The Mule application does NOT define any global error handlers.

A web client sends a POST request to the Multi application with this input payload The File Write operation throws a FILECONNECTIVITY error What response message is returned to the web client?

```

flow name= 'acceptorder' >
  <http:listener doc:name='HTTP: POST /order' config-ref='HTTP_Listener_config'
    path='/order' allowedMethods='POST'>
    <http:error-response >
      <http:body ><![CDATA[#[output text/plain -- payload]]]></http:body>
    </http:error-response>
  </http:listener>
  <file:write doc:name='Write' config-ref='File_Config' path='newOrder.json'>
    <error-mapping sourceType='FILE:CONNECTIVITY' targetType='ORDER:NOT_CREATED' />
    <file:content ><![CDATA[#[output application/json -- payload]]]></file:content>
  </file:write>
  <set-payload value='#["File written"]' doc:name='File written' />

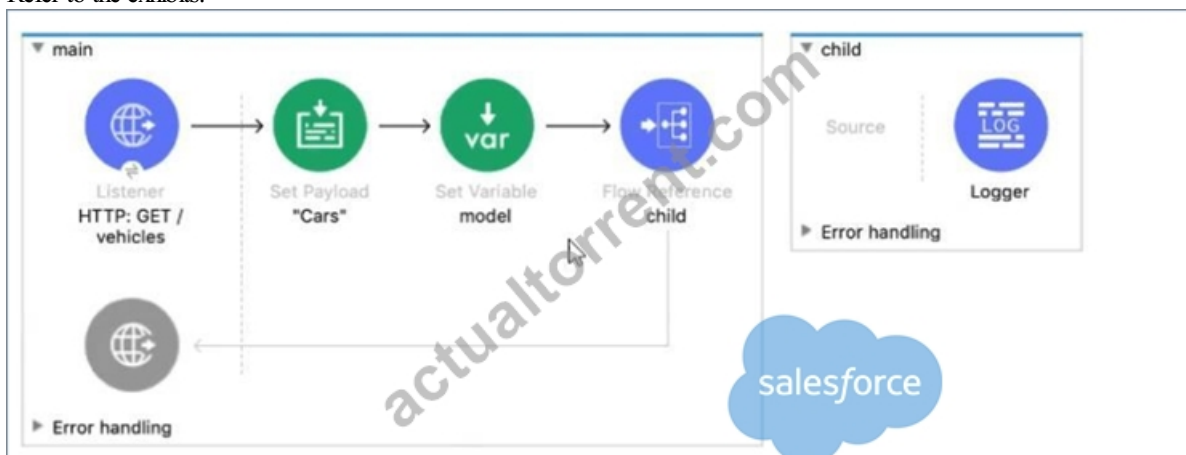

```

- A. "OTHER ERROR"
- B. "ORDER NOT_CREATED"
- C. "File written"
- D. "FILECONNECTIVITY"

Answer: B

NEW QUESTION # 131

Refer to the exhibits.

The main flow contains a Flow Reference to the child flow.

A web client sends a GET request to the main flow's HTTP Listener that includes a make query parameter.

What values are accessible in the child flow?

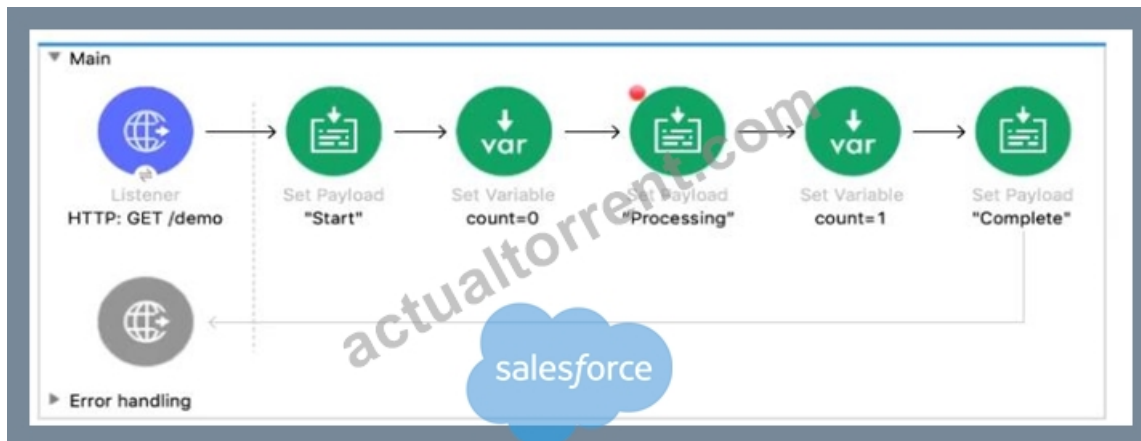

- A. payload

- B. payload
make query param
- C. payload
model var
- D. payload
make query param model var

Answer: D

NEW QUESTION # 132

Refer to the exhibit.

The Mule application is debugged in Any point Studio and stops at the breakpoint. What is the value of the payload displayed in the debugger at this breakpoint?

- A. "Start"
- B. "Processing"
- C. 0
- D. Complete"

Answer: A

NEW QUESTION # 133

.....

With the rapid development of the world economy and frequent contacts between different countries, the talent competition is increasing day by day, and the employment pressure is also increasing day by day. Our company provides three different versions to choice for our customers. The software version of our Salesforce-MuleSoft-Developer-I exam question has a special function that this version can simulate test-taking conditions for customers. If you feel very nervous about exam, we think it is very necessary for you to use the software version of our Salesforce-MuleSoft-Developer-I Guide Torrent. The simulated tests are similar to recent actual exams in question types and degree of difficulty. By simulating actual test-taking conditions, we believe that you will relieve your nervousness before examination.
