Our brand has marched into the international market and many overseas clients purchase our N10-009 valid study guide online. As the saying goes, Rome is not build in a day. The achievements we get hinge on the constant improvement on the quality of our N10-009 latest study question and the belief we hold that we should provide the best service for the clients. The great efforts we devote to the N10-009 Valid Study Guide and the experiences we accumulate for decades are incalculable. All of these lead to our success of N10-009 learning file and high prestige.

CompTIA N10-009 dumps PDF version is printable and embedded with valid CompTIA N10-009 questions to help you get ready for the N10-009 exam quickly. CompTIA Network+ Certification Exam (N10-009) exam dumps pdf are also usable on several smart devices. You can use it anywhere at any time on your smartphones and tablets.

New Test N10-009 Collection 100% Pass | Pass-Sure N10-009: CompTIA Network+ Certification Exam 100% Pass

Did you have bad purchase experience that after your payment your emails get no reply, your contacts with the site become useless? Stop pursuing cheap and low-price N10-009 test simulations. You get what you pay for. You may think that these electronic files don't have much cost. In fact, If you want to release valid & latest CompTIA N10-009 test simulations, you need to get first-hand information, we spend a lot of money to maintain and development good relationship, we well-paid hire experienced education experts. We believe high quality of N10-009 test simulations is the basement of enterprise's survival.

CompTIA Network+ Certification Exam Sample Questions (Q327-Q332):

NEW QUESTION # 327
Users are reporting issues with mobile phone connectivity after a cellular repeater was recently installed. Users also note that the phones are rapidly losing battery charge. Which of the following should the technician check first to troubleshoot the issue?

- A. Power budget
- B. Signal strength
- C. Channel frequency
- D. WPS configuration

Answer: B

Explanation:
When signal strength is poor, mobile devices constantly boost their transmission power in an attempt to maintain a stable connection. This results in dropped calls/data and rapid battery drain. Since a repeater was installed, misalignment or misconfiguration could be degrading the signal strength.
A . WPS applies to Wi-Fi, not cellular repeaters.
C . Channel frequency might matter for interference, but signal strength is the most direct cause of the described symptoms.
D . Power budget applies to PoE and wired devices, not mobile phones.

NEW QUESTION # 328
A network administrator is troubleshooting a connectivity issue between two devices on two different subnets.
The administrator verifies that both devices can successfully ping other devices on the same subnet. Which of the following is the most likely cause of the connectivity issue?

- A. Faulty Ethernet cable
- B. Incorrect default gateway
- C. VLAN mismatch
- D. Wrong duplex settings

Answer: B

Explanation:
When two devices on different subnets are unable to communicate, but can communicate with other devices on their own subnet, the issue is most often related torouting. Devices on different subnets require adefault gatewayto route traffic between networks.
* If thedefault gateway is incorrectly configured, the device won't know how to reach other subnets.
* Faulty cables (Option B) or duplex mismatches (Option C) would likely cause connectivity issues even within the local subnet, which is not the case here.
* VLAN mismatches (Option D) are typically issues with switch port configurations and would likely cause total loss of connectivity, including within the same subnet.
#So, the most probable andlogical causeis anincorrect default gateway.

NEW QUESTION # 329
Which of the following refers to an attack in which an attacker can access traffic from multiple VLANs by tricking a switch into believing a host is another switch?

- A. VLAN hopping
- B. ARP spoofing
- C. DNS poisoning
- D. Evil twin

Answer: A

Explanation:
VLAN hopping occurs when an attacker tricks a switch into believing the host is another switch by generating tagged frames or exploiting trunk negotiation (DTP). This allows the attacker to access traffic from multiple VLANs, potentially stealing sensitive data.
* B. Evil twin is a rogue wireless AP attack, unrelated to switch impersonation.
* C. DNS poisoning corrupts name resolution, not VLAN access.
* D. ARP spoofing is a Layer 2 on-path attack, not masquerading as a switch.

NEW QUESTION # 330

A network administrator recently updated configurations on a Layer 3 switch. Following the updates, users report being unable to reach a specific file server. Which of the following is the most likely cause?

- A. Switching loop
- B. Duplicate IP addresses
- C. Wrong default route
- D. Incorrect ACLs

Answer: D

Explanation:
*Since this issue occurred after a configuration change on a Layer 3 switch, the most likely cause is misconfigured ACLs (Access Control Lists).
*ACLs control which traffic is allowed or denied, so an incorrect ACL may be blocking access to the file server.
*Why not the other options?
*Switching loop (B): A switching loop occurs at Layer 2 (not Layer 3) and causes network-wide broadcast storms, not just loss of access to a file server.
*Duplicate IP addresses (C): This would cause connectivity issues for the devices with the conflict, but not necessarily prevent all users from accessing the file server.
*Wrong default route (D): The default route is used for traffic leaving the local network. If users are unable to access an internal file server, this is unlikely to be the issue.

NEW QUESTION # 331

Which of the following is the next step to take after successfully testing a root cause theory?

- A. Duplicate the problem in a lab.
- B. Determine resolution steps.
- C. Present the theory for approval.
- D. Implement the solution to the problem.

Answer: B

Explanation:
Troubleshooting Methodology:
Confirming the Root Cause: After testing and confirming the theory, the next logical step is to address the issue by implementing a solution.
Implementation of the Solution:
Resolve the Issue: Implement the identified solution to rectify the problem. This step involves making necessary changes to the network configuration, replacing faulty hardware, or applying software patches.
Documentation: Document the solution and the steps taken to resolve the issue to provide a reference for future troubleshooting.
Comparison with Other Steps:
Determine Resolution Steps: This is part of the implementation process where specific actions are outlined, but the actual next step after testing is to implement those steps.
Duplicate the Problem in a Lab: This step is typically done earlier in the troubleshooting process to understand the problem, not after confirming the root cause.
Present the Theory for Approval: In some scenarios, presenting the theory might be necessary for major changes, but generally, once the root cause is confirmed, the solution should be implemented.
Final Verification:
After implementing the solution, it is important to verify that the issue is resolved and that normal operations are restored. This may involve monitoring the network and testing to ensure no further issues arise.
