If you have any questions about our Cybersecurity-Practitioner practical materials, you can ask our staff who will give you help. And we offer considerable services on the Cybersecurity-Practitioner exam questions for 24/7.

Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q123-Q128):

NEW QUESTION # 123
Which attacker profile uses the internet to recruit members to an ideology, to train them, and to spread fear and include panic?

- A. cyberterrorists
- B. hacktivists
- C. state-affiliated groups
- D. cybercriminals

Answer: A

Explanation:
Cyberterrorists are attackers who use the internet to recruit members to an ideology, to train them, and to spread fear and induce panic. Cyberterrorists may target critical infrastructure, government systems, or public services to cause disruption, damage, or harm. Cyberterrorists may also use the internet to disseminate propaganda, incite violence, or coordinate attacks. Cyberterrorists differ from other attacker profiles in their motivation, which is usually political, religious, or ideological, rather than financial or personal. Reference: Cyberterrorism, Cyber Threats, Cybersecurity Threat Landscape

NEW QUESTION # 124
Which type of attack involves sending data packets disguised as queries to a remote server, which then sends the data back to the attacker?

- A. Command-and-control (C2)
- B. DDoS
- C. Port evasion
- D. DNS tunneling

Answer: D

Explanation:
DNS tunneling is an attack technique where data packets are disguised as DNS queries and sent to a remote server. That server, often under the attacker's control, responds with additional data or instructions, effectively creating a covert command-and-control (C2) channel over DNS.

NEW QUESTION # 125
What is an operation of an Attack Surface Management (ASM) platform?

- A. It continuously identifies all internal and external internet-connected assets for potential attack vectors and exposures.
- B. It detects and remediates misconfigured security settings in sanctioned SaaS applications through monitoring.
- C. It scans assets in the cloud space for remediation of compromised sanctioned SaaS applications.
- D. It identifies and monitors the movement of data within, into, and out of an organization's network.

Answer: A

Explanation:
Attack Surface Management (ASM) platforms focus on continuous discovery and monitoring of all internet-facing assets, both internal and external, to identify attack vectors, vulnerabilities, and exposures that could be exploited by threat actors.

NEW QUESTION # 126
Which activity is a technique in the MITRE ATT&CK framework?

- A. Resource development
- B. Account discovery
- C. Lateral movement
- D. Credential access

Answer: B

Explanation:
Account discovery is a technique in the MITRE ATT&CK framework under the Discovery tactic. It involves adversaries attempting to identify user accounts on a system or network.
Credential access, lateral movement, and resource development are tactics - high-level objectives an attacker is trying to achieve.

NEW QUESTION # 127
Which component of the AAA framework regulates user access and permissions to resources?

- A. Accounting
- B. Allowance
- C. Authorization
- D. Authentication

Answer: C

Explanation:
Authorization is the component of the AAA (Authentication, Authorization, and Accounting) framework that regulates user access and permissions to resources after identity has been verified. It determines what actions or resources a user is allowed to access.

NEW QUESTION # 128
......
