問題 #101

Your customer has requested a proof of concept.

What should be included in your agreement with the customer? (Choose two.)

- A. 24/7 support
- **B. success criteria**
- C. production bill of materials
- D. production site survey
- **E. estimated timeline**

答案: B,E

解題說明:

A proof of concept (POC) is a demonstration of the feasibility and value of a proposed solution in a real-world scenario. It helps the customer to evaluate the solution before committing to a full-scale deployment. A POC agreement is a document that defines the scope, objectives, roles, responsibilities, and expectations of both parties involved in the POC. According to the HPE Edge-to-Cloud Solutions course, a POC agreement should include the following elements:

Success criteria: This is a set of measurable and achievable outcomes that indicate the POC has met the customer's requirements and expectations. It should be aligned with the customer's business goals and pain points, and reflect the key benefits and differentiators of the solution. For example, the success criteria could be based on performance, scalability, availability, security, cost, or user satisfaction metrics.

Estimated timeline: This is a realistic and agreed-upon schedule for the POC, including the start and end dates, milestones, deliverables, and feedback sessions. It should account for the time needed for planning, preparation, installation, configuration, testing, validation, and evaluation of the solution. It should also specify the duration and terms of the POC, such as the number of users, devices, or data involved, and the ownership and disposition of the equipment and software after the POC.

問題 #102

Your customer is considering a new HPE Alletra 9060 to service their mission critical database workloads.

Their CFO is concerned with the cost of the unused excess storage capacity that will service unforeseen future growth.

What business values does HPE GreenLake for Block Storage provide that could alleviate this concern?

- A. It sets the minimum capacity commitment level to the required capacity.
- **B. It provides storage capacity on an as-needed basis at a predetermined cost per GB.**
- C. It provides a fixed monthly cost, regardless of the storage consumption.
- D. It offers CapEx purchases so the client can depreciate the storage assets.

答案: B

解題說明:

HPE GreenLake for Block Storage is a storage-as-a-service solution that delivers a cloud operational experience for mission-critical applications. It enables customers to consume enterprise-grade block storage on demand, with a pay-per-use model that aligns costs with usage. This way, customers can avoid overprovisioning and paying for excess capacity that they may not need in the near future.

Instead, they can scale up or down as their needs change, and pay only for what they use at a predetermined cost per GB. This provides better economics and flexibility for customers who want to optimize their storage spending and improve their liquidity.

問題 #103

Your customer would like to containerize their applications and requires a container registry that can store, sign, and scan content.

Which open source technology meets the customer requirements?

- **A. Harbor**
- B. Spiffe
- C. Spire
- D. Containerd

答案: A

解題說明:

Harbor is an open-source, trusted cloud-native registry project that stores, signs, and scans content. For organizations implementing

a containerization strategy (such as with HPE Ezmeral or HPE GreenLake for Containers), security is a primary concern. Harbor provides a secure way to manage container images by providing role-based access control, image vulnerability scanning, and image signing to ensure the integrity of the code being deployed. Unlike "containerd," which is a container runtime, or "Spiffe/Spire," which are focused on identity and authentication between services, Harbor is specifically designed as a registry to manage the lifecycle of container images. It is frequently recommended in HPE container solutions to ensure that only "clean" and authorized images are utilized in the production environment.

問題 #104

Which tool is available to help you to engage with the customer to present the economic impact of an HPE GreenLake solutions?

- A. HPE Assessment Foundry
- **B. HPE GreenLake Estimator**
- C. HPE GreenLake Central
- D. HPE GreenLake Quick Quote

答案： B

解題說明：

The HPE GreenLake Estimator is a tool that helps you to generate pricing estimates for various HPE GreenLake cloud services and workloads, based on your customer's specific needs and parameters. The tool allows you to define your workload, review suggested configurations, fine-tune your specifications, and receive an email with your estimate. The tool also provides you with a comparison of the total cost of ownership (TCO) between HPE GreenLake and traditional IT models, as well as the potential savings and benefits of choosing HPE GreenLake. The HPE GreenLake Estimator is a useful tool to engage with your customer and present the economic impact of an HPE GreenLake solution, as well as to initiate the process of creating a formal quote.
