Cost Effective AP-202 Dumps, AP-202 New Study Guide

By offering these outstanding AP-202 dump, we have every reason to ensure a guaranteed exam success with a brilliant percentage. The feedback of our customers is enough to legitimize our claims on our AP-202 exam questions. Despite this, we offer you a 100% return of money, if you do not get through the exam, preparing for it with our AP-202 Exam Dumps. No amount is deducted while returning the money.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q193-Q198):

NEW QUESTION # 193

Which three actions must a developer take, in a B2B Commerce store, to accept credit card payments using a client's chosen payment provider?

- A. Create a named credential for authentication with the payment provider.
- B. Create an Apex class that implements the `sfdc_checkout.PaymentGatewayAdapter`
- C. Create an Apex class that implements the `commercepayments.PaymentGatewayAdapter`.
- D. Create a `PaymentProviderGateway` record for the custom payment provider class.
- E. Create a `RegisteredExternalService` record for the custom payment provider class.

Answer: A,B,D

Explanation:

Three actions that a developer must take, in a B2B Commerce store, to accept credit card payments using a client's chosen payment provider are: create a named credential for authentication with the payment provider, create an Apex class that implements the `sfdc_checkout.PaymentGatewayAdapter` interface, and create a `PaymentProviderGateway` record for the custom payment provider

class. Creating a named credential for authentication with the payment provider allows the developer to securely store and manage authentication information, such as username, password, token, or certificate, for connecting to the payment provider's API or service. Creating an Apex class that implements the `sfmc_checkout.PaymentGatewayAdapter` interface allows the developer to define custom logic for processing credit card payments using the payment provider's API or service. The interface provides methods for validating credit card information, authorizing payments, capturing payments, voiding payments, and refunding payments. Creating a `PaymentProviderGateway` record for the custom payment provider class allows the developer to register the custom payment provider class as a payment gateway in the store and associate it with a payment method. Creating a `RegisteredExternalService` record for the custom payment provider class is not a required action, as this is only used for registering external services that are not related to payment processing, such as tax or shipping services. Creating an Apex class that implements the `commercepayments.PaymentGatewayAdapter` interface is not a required action either, as this is only used for D2C Commerce stores, not B2B Commerce stores. Salesforce B2B Commerce Developer Guide: Payment Integration, B2B Commerce Developer Guide: Payment Gateway Adapter Interface, B2B Commerce Developer Guide: Payment Provider Gateway Object

NEW QUESTION # 194

What is one requirement to keep in mind when including additional JavaScript 1h files in a Lightning Web Component?

- A. All the files must be imported to a `singleton.js` file and the `singleton.js` file can be used with an import statement
- B. Only one of the files can be used with an import statement
- C. The files must be ES6 modules and must have names that are unique within the component's folder.
- D. Only five of the files can be used with an import statement

Answer: C

Explanation:

When including additional JavaScript files in a Lightning Web Component, it is required that these files are ECMAScript 6 (ES6) modules and have unique names within the component's folder. This ensures proper module resolution and avoids namespace conflicts. Salesforce LWC documentation provides guidelines on organizing component resources, including JavaScript modules, to ensure they are correctly recognized and utilized within the LWC framework.

NEW QUESTION # 195

Which two statements are true for Mass Order (2 answers)

- A. Mass Order is mobile ready with the `ccrz` templates.
- B. The variation product is leveraged for SKUs.
- C. Mass Order pricing is done via a batch job.
- D. Mass order works with the default wishlists

Answer: B,C

Explanation:

Mass Order pricing is done via a batch job, which means that the prices are not calculated in real time, but rather at a scheduled time. Mass order works with the variation product, which is a product that has multiple SKUs with different attributes, such as size or color. Mass order does not work with the default wishlists, which are used to store products that the customer wants to buy later. Mass order is not mobile ready with the `ccrz` templates, which are the default templates for the storefront pages. Salesforce B2B Commerce Developer Guide: Mass Order, B2B Commerce Developer Guide: Variation Products

NEW QUESTION # 196

Northern Trail Outfitters (NTO) has a requirement to schedule a reusable data import across multiple orgs for customer demo purposes. NTO also has a requirement to seed data of related objects-`ProductCatalog`, `ProductCategory`, `Product2`, and `ProductCategoryProduct`- while preserving its relationships and without purchasing additional licenses or using thirdparty tools. What is the recommended tool a developer should select to address the requirement?

- A. Commerce Product Data Import
- B. Data Import Wizard
- C. Dataloader.io
- D. Bulk Import Using Command Line Interface

Answer: A

Explanation:

The Commerce Product Data Import resource is the recommended tool for importing products for a B2B or B2C store using a .csv file. This resource supports importing data of related objects, such as ProductCatalog, ProductCategory, Product2, and ProductCategoryProduct, while preserving their relationships. It also does not require additional licenses or third-party tools. The other options are either not specific to Commerce products, or do not support importing data of related objects. Reference:

Commerce Product Import Resource

Import and Export Commerce Data

B2B and D2C Commerce Data Model

NEW QUESTION # 197

A developer needs to bulk export all of the Product data from an org and does not have access to Data Loader or Workbench. However, the Command Line Interface (CLI) is available. Which command allows the developer to accomplish this task?

- A. `sfdx force:data:tree:export -q <path to file containing soql query> -x export-demo -d /tmp/sfdx-out -p`
- B. `sfdx force:data:tree:export -o Product?`
- C. `sfdx force:data:tree:export -h`
- D. `sfdx force:data:tree:export -Product2 -all`

Answer: A

Explanation:

The Salesforce CLI command `sfdx force:data:tree:export` is used to export data from an org into one or more JSON files. The `-q` flag is used to specify the path to a file containing a SOQL query, `-x` is used to specify the name of the exported file, `-d` is used to specify the directory where the exported file will be saved, and `-p` is used to indicate that all records returned by the SOQL query should be exported. This command allows developers to bulk export data from an org without needing access to Data Loader or Workbench. Therefore, option A is the correct answer. Please note that the actual SOQL query and the directory path would need to be replaced with the appropriate values for the specific use case.

NEW QUESTION # 198

.....

Allowing for the different needs of exam candidate, we offer three versions of our AP-202 learning braindumps for you. They are app, software and pdf versions of our AP-202 training questions. All crucial points are included in the AP-202 Exam Materials with unequivocal contents for your reference with stalwart faith. And we also have the according three free demos of the AP-202 practice engine for you to download before your purchase.
